LUCKY 7 ANGUS
COWBOY BULLS

Box 66 • Boulder, WY 82923
Box 1445 • Riverton, WY 82501

Greetings Cattlemen,

Welcome to the 19th annual "Cowboy Bulls" production sale. As a five generation commercial ranch family, I can't believe we've been selling bulls so long. It seems like just yesterday when we started this mission to make bulls tougher and more durable than the typical seedstock industry bull. Remember, we were the outcast as we sold the first un-pampered and unclipped bulls, and raised registered cows in real world conditions. Then we took PAP/high elevation to a new level by setting the highest standards in the industry, and one of the few that ran cattle above 7000 feet. Lucky 7 Angus was the first to offer a 4 year guarantee and the first to feed efficiency test a cow herd. We were also the first Angus producer to purchase a "GrowSafe" feed efficiency test system. We are honored that you, our customers, the hard working commercial rancher have supported us through all these years and through all these progressive ventures.

Every bull selling today has proven feed efficiency genetics and has a momma that is being fed less today than any cows we have ever had. Both he and his mom have been in tougher, more real world conditions, than any other bulls selling. The 2 year olds and fall bulls were summered, then PAP tested at 7580 feet, which is the highest elevation of any major Angus breeder. They are all developed in 25-60 acre pastures on a high roughage ration to make better feet and legs. These bulls are durable and range ready! The quality in these deep ribbed, easy fleshing bulls is impressive clear to the end. They will make very durable trouble free cows. So far this year we have calved over 120 heifers and haven't assisted any, using these genetics.

The cattle industry is a business. If it is ran like a finely tuned engine, it will turn into a way of life that will be sustainable for many generations. If it is not ran as a business your way of life will change. The bull business is the same. Lucky 7 Angus runs there business/ranch with the philosophy of raising their animals in real world conditions that make a superior product. We then add to it the highest standards in the industry for PAP/high elevation and feed efficiency testing. This business model creates a product designed to make our customers money. Most of our competitors also run a tight business, but their business model says they will work on customers' emotions. This is why their cattle and bulls are always pampered. Why their bulls sell over fed, with hoof and hair trimming. Both business models are successful. Now it is up to you to decide which bulls are more likely to make money on your place, or which cows are better suited to make a living on your ranch. We know there are many choices for you as to where you buy bulls. We respect that and are extremely blessed when you choose our program.

Our warmest welcome goes out to you and your families. If we can be of assistance, don't hesitate to ask.

Thanks and may God bless you,

Lucky 7 Angus

LUCKY 7 ANGUS

Where tougher conditions, and higher testing standards make better bulls!!!

616 N Federal Blvd., Riverton, WY
Sale headquarters. Ask for Lucky 7 Angus rates!!

TERMS & CONDITIONS

CASH. Cattle sell under the Terms and Conditions of the American Angus Association.

LUCKY 7 FOUR YEAR BULL GUARANTEE

See our bull guarantee program on page 23

DELIVERY

Free delivery first 300 miles on purchases of $3,000 or more. All other delivery at cost.

References: American Angus Association®, AHIR®, Angus Source®, CAB®, Pathfinder®. EPDs current as of February 2, 2018. Updated EPDs can be viewed at www.angus.org.

SALE ORDER

61 Yearling Angus Bulls
27 Fall Embryo Bulls
255 Two Year Old PAP Tested Bulls

FERTILITY

All bulls will be fertility tested within 3 weeks prior to sale. This will guarantee all bulls selling to be fertile and satisfactory breeders at time of sale. (Some breeders do not have bulls fertility tested before the sale, but it is mandatory at Lucky 7 Angus to meet our high standards.)

SIGHT UNSEEN PURCHASE GUARANTEE

Buyers unable to attend the sale may call or send their bids to any of the representatives listed above. All cattle come with a Satisfaction Guarantee.

PAP TESTING

All PAP scores on 2 year olds and fall bulls were taken at 7,580' and yearlings at 7,075' after 120 days exposure by Dr Tim Holt. For further PAP information, see page 4.

BULLS SELL IN WORKING CLOTHES

The bulls in this sale have been on a high roughage low energy ration. They will not be as fat as at most sales. Overfeeding bulls causes permanent fertility problems. Bulls fed as these are, will simply breed more cows.

ULTRASOUND AND CARCASS DATA

Ultrasound carcass and fertility test information will be available at the sale.

FEED EFFICIENCY

Many of the bulls in the sale went through the GrowSafe test system. Of the bulls tested, the top 50% will be shown under their footnotes. A feed efficiency evaluation score will be added in the footnotes as an additional reference for your convenience. See page 19.

Announcements from the block take precedence over any printed matter.

CATTLE USA.com LIVE CATTLE AUCTIONS *How to Bid Online*

1. Go to **www.CattleUSA.com** First time users must register as a viewer.
2. In the 'Live Auctions' tab select the sale that you wish to register as a buyer for (only if you wish to bid) and click the 'Submit' button. Fill out the required contact and banking information then click the 'Proceed' button.
3. After you have been approved as a buyer you will receive a confirmation email. On sale day, log in and click the green 'View' button for our sale. You will have the bid console available to place your online bids.

High speed internet required. For assistance, or a live representative at the sale call

2 Year olds and Fall bulls were PAP tested at **7580** feet, and Yearlings at **7075** feet after **135** days exposure.

"PAP RISK CATEGORY EVALUATION"

This information was performed in a consultation with Dr. Tim Holt, DVM, after PAP testing and all variables were known.

5 Star ♥♥♥♥♥ Low Risk Cattle:
These are cattle that have been PAP measured and have found to be at LOW risk for developing or carrying the gene combination for true Bovine High Mountain Disease. This group of cattle is suitable for use at any elevation.

4 Star ♥♥♥♥ Moderate Risk Cattle:
These are cattle that have been PAP measured and have found to be at a MODERATE risk for developing or carrying the gene combination for true Bovine High Mountain Disease. This group of cattle is suitable for use at the elevation of testing and below. (PAP test was performed at 7580 feet on all Two year olds & Fall bulls. The Yearlings were PAP tested at 7075 feet.)

Dr. Holt PAP testing above 7,000 feet

3 Star ♥♥♥ Unknown Risk Cattle:
These are cattle that a PAP test was unable to be performed, or cattle PAP tested at less than one year of age with a PAP score of 46-49mmhg. This group of cattle can change, as per risk category, up or down and therefore it is advised that they be retested when they are acclimated to their new home.

2 Star ♥♥ High Risk:
These are cattle that have been PAP measured and have found to be at a HIGH Risk for developing or carrying the gene combination for true Bovine High Mountain Disease. This group of cattle is suitable for use at lower elevations only.

1 Star ♥ Extreme Risk:
These are cattle that have been PAP measured and have found to be at an EXTREME risk for developing or carrying the gene combination for true Bovine High Mountain Disease. This group of cattle should be used with caution at any elevation.

DEFINING A RISK CATEGORY:

The PAP Risk Category Evaluation is being developed to add to the repeatability and dependability of a PAP measurement. The PAP score measurement in and by itself is a meaningless number without knowing the age, size, elevation, length of exposure to that elevation, environmental conditions, Systolic and Diastolic pressures. By adding to the PAP score, a risk category, the buyer can make a better selection for use in high elevation. All animals in each risk category have nearly the same statistical chance of developing or carrying the gene combination for true High Mountain Disease. The PAP test is not 100% in any fashion but it is an indicator of pulmonary hypertension in that animal. Each animal tested will be given a risk category rating following the test and evaluation of the variables mentioned above. This information and scoring was 100% done in consultation with Dr. Tim Holt, DVM.

(Lucky 7 Angus will guarantee all bulls selling in this catalog for High Mountain/Brisket Disease up to 6200 feet elevation and all Low to Moderate Risk bulls up to the corresponding elevation of the PAP Risk Scoring Category Evaluation.)

♥♥♥♥♥♥♥♥♥♥ A PAP test performed at 5500 feet and below will locate less than 60% of the animals carrying the gene combination for true Bovine High Mountain Disease in elevations above 7000 feet. This information has been proven at Lucky 7 Angus by testing, research and data.♥♥♥♥♥♥♥♥♥♥

2 Year olds and Fall bulls were PAP tested at **7580** feet, and Yearlings at **7075** feet after **135** days exposure.

Every yearling bull is out of a first calf heifer.

Fall Bulls - Lots 62-88

These 27 fall-calved bulls were born on our Oklahoma ranch. They were brought to Daniel Wyoming in May where they ran in high elevation pastures with the rest of our two-year olds. They were PAP tested at the same elevation, 7580'. These fall bulls will be out of the top end of the Lucky 7 cowherd and most are embryos. Only the best genetics that were located in Wyoming's tough conditions were taken to Oklahoma where we have developed our intense embryo program. Once weaned, they go thru the same rigorous testing as the rest of our bulls. The weaning weights are a bit lower as we have been on a southern learning curve and their nutrient requirements were not always met. Their mamma's have been through more inclement conditions and testing than any cows we own. "These are some of the best genetics we will sell!"

FEED EFFICIENCY

About half of the bulls went through the "GrowSafe" feed efficiency test system. Of the bulls tested the top 50% will be shown under their footnotes. This data has been calculated into a RFI score. (Residual Feed Intake) The lower the RFI score or more negative, the better the feed efficiency. We also notate animals with exceptional feed conversions, as per ration, another measure of feed efficiency.

All bulls in this sale will be at the top of the industry for feed efficiency. Dr. Kerley with the University of Missouri has studied our data and determined Lucky 7 genetics to be 15-30% more efficient than average. In feedlots, with over 3500 animals fed out, Lucky 7 Angus genetics have been in the top 1-15% for feed efficiency in every pen. Lucky 7 cows are maintaining on diets 30-45% less than nutritional guidelines have determined necessary.

68% of the cost of raising a cow is associated with feed. This fact alone is proof that feed efficiency in cattle has the greatest economic impact on any ranch. Interesting data on dairy cows has shown, if a cow is proven to be (10%) more feed efficient, she will produce (10%) more milk on the same ration as an average feed efficient dairy cow and when not in production eat (10%) less. This directly correlates with what we see here at Lucky 7 Angus as well.

Feed efficiency testing growing cattle in a feedlot may not locate the cattle efficient on your ranch. Only by testing the cowherd too can you guarantee feed efficiency both at your ranch and in the feedlot. Lucky 7 Angus has also proven feed efficiency in our cowherd by limit feeding them using big vertical mixers for the past 15 years. Every bite they eat is weighed. We know how much they require this year, last year, and 15 years ago. No other seed stock producer has this advantage.

FEED EFFICIENCY SCORING SYSTEM

Lucky 7 Angus has been feed efficiency testing our cow herd since the early 2000's. In 2009 we purchased a "GrowSafe" Feed Intake Monitoring System to have infinitely more feed efficiency testing and data. For the past 10 years we have relentlessly researched and studied feed efficient pedigrees. Our knowledge is second to none in this field. Lucky 7 Angus has the highest accuracy or R squared number in the "GrowSafe" data base. Even with the most accurate data, many variables can change the RFI score and give you a false prediction. That is why it is impossible to determine with any RFI numbers the true feed efficient animals. Our customers have asked for an easier and more reliable tool. We have implemented a Feed Efficiency Evaluation Score to predict the probability on every bull selling. This score is calculated by using scientific, statistical and analytical data derived from test results, parentage and other variable factors. For a total of +100 to a -100, with zero being an average animal. (See below) This is the same method Lucky 7 Angus uses to discover true scientific Feed Efficiency in cattle. This scoring system will add to the predictability of an animal passing feed efficient genetics.

Any animal of +50 and above we estimate to be in the top 10 to 20% of the breed.	
+100	Extremely Feed Efficient
+50	Very Efficient (Top 15 – 20% of the breed)
0	Average of Breed
-50	Inefficient
-100	Extremely Inefficient

You can't talk a <u>trait</u> unless you can <u>prove</u> it!

LUCKY 7 ANGUS "NO BULL SHIT" 4 YEAR GUARANTEE

All bulls selling over $3000 in the March 3, 2018 sale will be guaranteed against injury that renders them incapable of breeding, or to be a potential breeder except those specifically listed below. How much more could you pay for a bull knowing he would last 4 years? And how much better could you manage your budget and your genetics? Knowing the average longevity of bulls from most breeders, this could easily be worth $1500/bull or more. As the industry leader, breeding and raising bulls capable of holding up, lasting longer and taking tougher conditions, it is fitting that Lucky 7 Angus is the first to raise the bar and offer a 4 year guarantee. We hope that others who claim to have bulls which can do the same will step up to the plate.

This guarantee only applies to original purchaser and shall not apply to any bull which has not been maintained by original purchaser at all times and for normal breeding practices and in normal breeding conditions. This guarantee only applies to bulls which are maintained at all times in accordance with rules and practices of good animal husbandry and management.

Claims shall be resolved as follows: Bulls purchase price up to $8500 less salvage value ($1200.00 minimum) shall be credited to the purchaser toward purchase of (1) bull at following Lucky 7 Angus Bull sale. The credited purchase price decreases by 25% per year, after turn out to cows, or July 1st, whichever is earlier. All Credits due must be used In first proceeding Lucky 7 Angus bull sale following injury, or will become void. Original purchaser must contact Lucky 7 Angus within 14 days of discovery of injury and have licensed veterinarian's verification. Lucky 7 Angus retains the right to use an agent of their choice for all verifications. If any claims are denied by Lucky 7 Angus, purchaser must respond with written legal explanation describing why guarantee should apply, or lose any guarantee available on bulls.

Exceptions: Injuries or loss caused by motor vehicles, equipment, or trains; injury or loss caused by acts of nature/God including but not limited to: lightening, tornadoes, blizzards, freezing cold, fires, drowning; injury or loss from disease, feed intake or poisoning, any human caused injury or loss, including but not limited to: nuclear, radioactive, contamination, war, invasion, acts of terrorism; confiscation, quarantine, theft; malicious or willful injury to animal, injury or loss caused by carelessness, neglect; failure to maintain good animal husbandry and management; any injury or loss caused by predation.

NOT TO ARGUE, JUST THE FACTS!

BIRTH WEIGHTS. Lucky 7 Angus weighs over 1100 calves/year at birth. This gives us accurate calving data. Very seldom do we ever pull a calf from a 1st calf heifer, if 82 pounds or less. (At least 60% will calve unassisted from 85-to 90#'s.) Fact; A cow's calf will weigh 10-15 pounds more at birth than the same calf if she was a first-calf heifer. Research has proven cows in extreme cold weather will increase their birth weights up to 15%. Also cows gaining weight in the third trimester will also have heavier calves, which is what the Lucky 7 cow must due each winter after grazing above 7000 feet until mid-late January. Both factors together easily add 10-15% to calf birth weights from our mature cows. These factors should be considered when purchasing your bulls. Lucky 7 Angus has not pulled a calf from a cow, with a normal presentation, in over 15,000 head. The birth weight EPD is a more accurate indicator than the actual weight in most cases. (A birth weight EPD up to a +2.0 may be suitable for heifers. Every bull in the sale is suitable for a standard cow, with proper management.)

Disclaimer. Lucky 7 Angus has been pushing our cows to become as efficient as they are today for over 24 years. Little by little, bit by bit we have fed them less and put them in harsher conditions to genetically and physically change them as they are today. At no time in this long grueling process have any cows been starved or mistreated. By creating these genetics that can "do more on less", thousands of cattle throughout the U.S. are healthier. Please do not try to force your cows to do what ours can without careful consideration. By using Lucky 7 Angus genetics most of the work has been done for you.

Thank you for coming to the sale!

Two Year Old Bulls

'TILL WE MEET AGAIN

"The Lord himself goes before you and will be with you,
He will never leave you nor forsake you. Do not be afraid, do not be discouraged."

-Isaiah 58-11

NOTES

A Lucky 7 Angus first calf heifer with her calf.

Feed efficiency at high elevation never looked so good!

One family, five generations raising tough, high elevation cattle in the "Nation's Icebox" since 1895.

LUCKY 7 ANGUS
