

54 Years of Producing Registered Angus Cattle!

SELLING

100 FORAGE DEVELOPED
2-YEAR-OLD BULLS

40 BRED HEIFERS

60 COWS

Diamond  **ngus**

Diamond ngus

ANNUAL BULL & FEMALE SALE

**Open December
11th, 12th and 13th**

Selling:

- ♦ **100** Forage Developed Coming Two-Year-Old Bulls
- ♦ **40** Forage Bred Heifers
- ♦ **60** Bred Mixed Age Cows

All females sell as commercial-- any females that can be registered have the option to purchase registration papers for \$100 each. Any female selling for \$2500 or more will have the registration papers transferred to the new owner at no cost.

TABLE OF CONTENTS

Herd Sires	6
Forage Developed, Long Yearling Bulls.....	8
Bred Heifers	30
Bred Mixed Age Cows	33

My father always said that we judge a bull by the daughters he leaves in our herd. That usually takes ten or more years to know for sure.

If you would like to increase your odds on purchasing a good bull, it is a necessity that you buy bulls that have many good bulls and good dams in their ancestral pedigree. Sires and dams that have proven over time that they will produce functional, trouble free cattle increases the odds of getting the results you would like to see. The fuller the pedigree is with these types, the odds dramatically increase on getting the results you need.

This is nothing new, people have known this for generations. It is only in modern history that it has become popular to breed on numbers. It is no surprise that those types of cattle have lost the functional traits needed in order to keep them in production.

Welcome to our 32nd sale!

Our family is not new to the changes in the cattle business. My family has been raising registered Angus for over 60 years and we have seen many fads come and go. It is not unusual that mainstream registered breeders have always sought out the most in whatever is popular at that moment. My father taught me many years ago that any time a person puts too much emphasis on one trait then something else important is lost. So life is too short to make too many mistakes in the cattle business. I will never forget this great advice. So what you will find at Diamond D Angus is not extreme in anything, except, EXTREMELY FUNCTIONAL. I understand that balanced is not flashy or even popular. Balance is and will always be what most commercial cattle producers need. You will hear a lot of seed stock producers claim they are about balance, and to show proof they will point to the EPD numbers. In the past, EPD numbers have measured terminal traits. Nothing wrong with terminal traits, however the people doing this will also try to make you believe they are maternal. Most terminal traits are antagonistic to maternal traits.

For the first time ever we are going to a 100 percent online sale as well as a new sale date. Bidding will start December 11, and continue until December 13, all details will be outlined in this catalog. By no means are we discouraging visitors to our ranch. Hopefully it will give me more one-on-one time with individual customers. We are very proud of our cow herd and would love to show anyone that would like to look.

Our forage developed, long yearling bulls represent fertility and durability. Most were conceived in the first heat cycle and all were developed on grass hay, salt and mineral. We don't hide shortcomings behind concentrate feed, foot trimming or hair spray. We demand fertility, good feet, soft temperament, good scrotal and eye appeal. Since the majority of our customers are commercial producers, these bulls are bred and developed for real world conditions. Their daughters will become some of your favorite cows.

The bulls offered this year are a result of multi-sire breeding group, and DNA tested for parentage. We are not against AI breeding; however the advantages to this type of system are undeniable. We ran about 375 pairs with 11 bulls this last summer. Only the strongest, most fertile bulls will pass on their genetics. We left bulls in for 50 days and opens have always been eliminated from the herd. This is how most commercial cattle producers run their breeding programs. I feel very strongly that in most purebred operations they use bulls that have never seen a cow. No one has any idea about the ability of breeding in the real world. After many generations of using the next bull of the month are they losing the ability for natural service?

For the past two summers we moved cows and temporary fence daily. No question about the benefits to the land, grass and genetics. Here at Diamond D Angus we are moving to a year around grazing system and do very little hay feeding to cows. With extremely dry conditions we had this past summer, this could prove to be more of a challenge than I had hoped. We may have to supplement a little hay for about 60 to 90 days. We will never feed more than 15 pounds per head per day. This is substantially less than one ton per cow to get through the winter in northern Montana. Many seed stock producers are at 4 or even 5 ton per cow. In order for commercial producers to raise efficient, trouble free, fertile females it is necessary to buy from a seed stock producer that runs cows and challenges them in this type of system.

Hope to hear from you,
Mark De Boo

**PRE-REGISTRATION IS REQUIRED FOR THE
ONLINE SALE!**

PAYMENT OPTIONS

Method 1

Pay full purchase price. This will allow your bull or bulls to be delivered fall of 2021 or spring of 2022. Wintering charges will apply if you decide to have Diamond D Angus winter your bulls. If you want to have your bull or bulls delivered fall of 2021 you will have the option of buying insurance or not. If you would like Diamond D Angus to winter your bull or bulls insurance will be required. Details of our wintering policy are outlined underneath that subhead which appears on this page..

Method 2

You will be required to pay a nonrefundable 50% of purchase price on your bull or bulls. The balance owed, including wintering charges will be required at time of delivery. Insurance will be required. Wintering is outlined beneath that subhead on this page. Delivery charges will be the same as fall delivery.

ONLINE SALE DAYS

**December
11th, 12th, and 13th**

sale site: billpelton.com
diamonddangus.com

VOLUME DISCOUNT

Diamond D Angus offers a \$100 discount off third bull purchased, and \$100 off for each additional bull purchased by a single buyer.

HAULING DISCOUNT

\$50.00 discount if you haul within one week of the sale.

For Bulls Only.

WINTERING ARRANGEMENTS

Your bulls may be wintered at Diamond D Angus until the end of April at the cost of \$4.50 per head/per day, payable upon delivery or pick up.

DELIVERY

FREE DELIVERY on bulls to central points within 500-mile radius from Diamond D Angus. Beyond 500-mile radius, to central points at cost of 22 cents per mile per bull anywhere in the continental USA.

Purchaser assumes cost of shipping on females, at a cost of 22 cents per mile per head from Diamond D Angus anywhere in the continental United States.

CANADIAN DELIVERY

COVID will not effect cattle moving into Canada. Cattle will be delivered via Sweet Grass. Diamond D Angus will pay half the cost of the health papers on animals sold into Canada.

LOT NUMBERS

Ear tags and freeze brands will correspond with numbers in catalog.

Sale Day Information

2/3 INTEREST & FULL POSSESSION

Diamond D Angus is retaining one-third revenue sharing semen interest on every bull selling in this sale. Full possession and full salvage value sells on all bulls. Diamond D Angus will contact the new owner if they would like to collect semen and it will be done at the new owner's convenience, and Diamond D Angus' expense.

AIR TRAVEL

Great Falls is served by Delta, Horizon and Northwest Airlines. Great Falls is about an hour and a half from Diamond D Angus. Available if you would like to come and look at the cattle.

HERD HEALTH

Bulls sell 100% guaranteed to be fertile. We do not guarantee against injury. However we will pay partial insurance if desired.

All females selling have been ultrasound tested and fetal aged by Dr. Robert P. Lee, (406) 466-5333 Double Arrow Vet Clinic, Choteau, MT.

ONLINE SALE

The sale is **online** this year. You are welcome to come and see the cattle if you would like.

Video of all sale animals can be viewed at
diamonddangus.com

Thank You Jordan!

We would like to give a huge shout-out to our herdsman Jordan! We would not have been able to have this sale and successful herd without him! He has worked wonders with our cattle. We are so happy to have him a part of the Diamond D Angus Family!!

The Diamond D Advantage

◇ More fertile and will cover more cows.

◇ More years service from forage bulls.

◇ Will continue to gain weight through first breeding season.

◇ No bulls' feet or legs ruined due to hot feed.

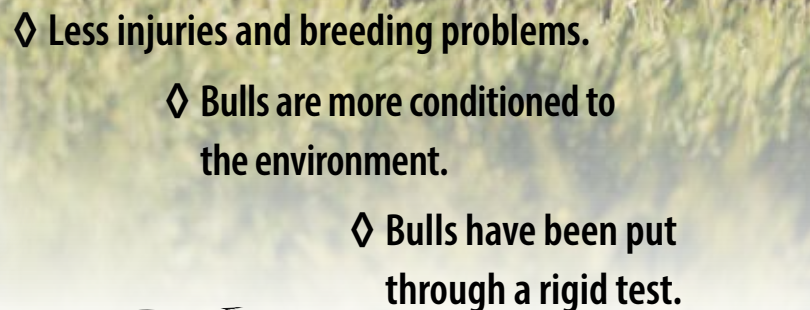

If you want to produce cows that will last a long time, it is important to use bulls from a herd that has cows that have a proven record of calving every year on time for 10 or more calves. We cull our herd for udder quality and temperament and refuse to trim feet. If an animal needs feet trimmed, we eliminate it.

Most pure-bred producers will make excuses for the problems you see on their cattle. The reality is almost everything you see is a result of genetics. When you listen to a producer talk mostly about performance and EPD numbers, chances are they have left most functional traits behind and the genetics will not last for very many years.

◇ Less injuries and breeding problems.

◇ Bulls are more conditioned to the environment.

◇ Bulls have been put through a rigid test.

Performance Information

LINE BREEDING

In the notes of all the bulls selling, we talked about pedigrees in hopes of helping our customers understand our breeding program. We strongly believe that our customers greatly benefit from buying line-bred bulls. The benefits include:

1. If you like what you see in a bull or cow family, by line breeding it intensifies these traits. A line-bred bull will breed more true to himself than a non-line bred bull.
2. Line breeding intensifies all traits, good and bad. If genetically there were a problem, it would show up in our herd. We would identify the problem and eliminate the use of these traits.
3. The cows and bulls that we have talked about in the notes have already gone through many generations of line breeding and put through a very rigid test. To pass the test they need to be of moderate frame, easy fleshing, adequate performance, structurally correct, and good udder quality. The bulls must be very masculine.

PERFORMANCE KEY

BW – Birth weight

WW – Weaning Weight

– Pathfinder

Cow/Calf Ratio – Adjusted Wean Efficiency Percentage of cow's weight that the calf weaned.

CALVING EASE PREDICTION

1 Cows Only

2 Fair Calving Ease

3 Good Calving Ease

4 Outstanding Calving Ease

This is only a prediction by Diamond D Angus. This is not a guarantee. The sire provides only 1/2 of the genetics in determining birth weight.

WEIGHT, SCROTAL AND HIP HEIGHT

All data was pulled on 10/20/21.

Cows That Last a Long Time...

COW/CALF RATIO

We calculate adjusted wean efficiency for each cow/calf pair. Adjusted wean efficiency is computed as the ratio of calf's adjusted 205 day weight to the cows adjusted weight. The adjusted cow weight is estimated by a process of rating each cow's body condition and giving her a score. A score of "5" is the median (no adjustment taken), 80 pounds is subtracted from her weight for a score of "6" and 80 pounds is added to her weight for a score of "4". By adjusting cow weights to equal body condition scores, it rewards cows that produce a bigger calf while maintaining her own body condition. Adjusted cow/calf ratio is shown for each sale bull in the catalog.

TEMPERAMENT & UDDER SCORES

Diamond D Angus feels it's very important to record temperament and udder scores. There are no EPDs on some of these very important traits. Considering the safety of the crew and the ease of handling the cattle, we feel it's well worth our time to score and cull the animals that don't meet the standards we have set. The performance, efficiency, and meat quality will improve with docile cattle. There is no such thing as a perfect cow, and you have to decide which traits you want or need. Many years ago we started a program of keeping records on the temperament and udder qualities of our females. We score them from 1 to 5 in each category. Each of our sale bulls was given a score for his dam's udder at time of birth. This and a score for his temperament are listed with each bull's data.

Udder Score

- | | |
|--------------------|--------------------------------|
| 1 – Very good. | 4 – Capable of raising a calf. |
| 2 – Above average. | 5 – A non functional animal. |
| 3 – Average. | |

Temperament Score

- | | |
|---|-----------------------------------|
| 1 – Calm. | 4 – Continuous vigorous movement. |
| 2 – Slightly restless, shifting. | 5 – Berserk, rearing twisting |
| 3 – Squirring & occasionally shaking the squeeze chute. | |

BEEF IMAGE ANALYSIS (BIA)

ULTRASOUND

BIA live animal carcass ultrasound is an automated, chute-side software system that captures images and calculates trait measurements on an objective basis. The traits determined by BIA ultrasound software are:

Ribeye Area	(REA)
Ribeye Area/100 lbs Live Weight	(REA/CWT)
Ribeye Shape Score	(Shape)
Percent Intramuscular Fat	(IMF)
Backfat Thickness	(BF)
Tenderness Score	(Tend.)
Stress Score	(Stress)

ULTRASOUND EXPLANATION

Ribeye Shape Score (Shape)

Indicative of desired shape of the ribeye muscle. Correlated to eventual Yield Grade, Cutability, and % Retail Product. Score ranges from 0.0 to 1.0. Acceptable score is 0.35 or greater. Ideal score is 0.50 or greater.

Tenderness Score (Tend)

Correlated to actual Warner-Bratzler Shear Force (WB) in carcass ribeye steak at 12th rib location. Correlation Coefficients between WB and TEND currently average 0.85 – 0.87. Score ranges from 10-50.

10 – Very Tender	40 – Slightly Tough
20 – Tender	50 – Tough
30 – Slightly Tender	

Ideal score is 25 or less. Acceptable score in yearling bulls is 28 or less.

Stress Score (Stress)

Correlated to immune system strength of calf. Score ranges from 10-50.

10 – No Stress	40 – Moderate Stress
20 – Slight Stress	50 – Severe Stress
30 – Slightly Moderate Stress	

Stress score impacts DTF, ADG, WDA, TCOG, Health Costs, QG, and YG. Ideal score is 20 or less.

HOW THIS SALE CLOSE WORKS

The Diamond D Angus online auction will close with horse race style bidding or extended bidding. This means that when the online auction event comes to its scheduled end time there will be 5 more minutes of extended bidding. If bidding continues the sale will stay open until there is a 5-minute stretch with no bidding on any lot. Once there is a full 5 minutes with no bidding on any lot, the whole event will close.

This auction is scheduled to close at 1pm on December 13th.

• **Example 1:** *The auction closes at 1pm and goes into extended bidding. If there are no bids on any lot between 1pm and 1:05pm. The whole sale is declared closed at 1:05pm.*

• **Example 2:** *The Auction is scheduled to close at 1pm and goes into extended bidding. There is a bid on a lot at 1:02pm. Every lot remains open to bids. If there are no bids on any lot by 1:07, the whole sale is declared closed at 1:07pm.*

• **Example 3:** *The Auction is scheduled to close at 1pm and goes into extended bidding. There is a bid on a lot at 1:02pm. Every lot remains open to bids. Another bid is placed at 1:06. Every lot remains open. Another bid is placed at 1:10. Every lot remains open. If there are no bids on any lot by 1:15, the whole auction is declared closed at 1:15pm.*

You may use the maximum bidding feature throughout the extended bidding. A maximum bid will automatically increase your bid when someone else bids on this lot up to your set maximum.

If you are the highest bidder, or want to be, and the auction is coming to a close keep an eye on your watch list. During the bidding process you will not need to refresh your page to ensure you are viewing the most current bidding activity. The auction platform auto-refreshes the page, and the bidding is in real time.

Creating an Account with Pelton Livestock Online Auctions

Only registered bidders over the age of 18 can participate in Pelton Livestock online auctions. To register, select the Login/Register link on the right top side of the screen in the navigation bar. Register for a new account by entering your contact information, email address, desired password, etc. Once you submit the auction registration form, an email will be sent to the email account provided. Please click the link in that email to activate your account. Prior to Prebidding opening day, view auction and click "request to bid" on any lot to be approved for bidding. Request will be sent to Seller and once approved, you will be notified that you can now bid live for that auction. Please keep your user information (email address and password) in a secure place as you can use the same account login for all online auctions hosted by Pelton Livestock. If you have any questions or need assistance with creating an account or bidding, please call PELTON LIVESTOCK Darci Sachdeva at 406-794-3174.

AUCTION DEMO AVAILABLE

Login with credentials provided at registration and enter "Demo Auction" to practice bidding. For Help call Darci Pelton Sachdeva (406) 794-3174.

BUYER FAQ

Please read Buyer FAQ on the upper right-hand side of the screen in the navigation/menu bar to learn how to bid, use watch lists, maximum bids and more.

IS THE AUCTION PLATFORM MOBILE FRIENDLY?

Yes, the auction platform and entire site is mobile friendly. So, no matter the device (computer, cell phone, tablet, etc.) you are utilizing to view and/or bid on an auction, the site is responsive to your screen, so you have the most optimum viewing and bidding experience.

Herd Sires

The Pinebank SE 9D and 10D are $\frac{3}{4}$ brothers, they are out of a flawless old cow that stayed in production for many years. She was my favorite cow when I visited the Pinebank herd in New Zealand. You see the cream rises to the top with time. I believe that even when people are uncertain about what bull or cow to concentrate on, just by looking at a pedigree and knowing the number of good proven cows and bulls in it, it is a good yard stick on what the offspring will do. Both the Pinebank SE 9D and 10D both look fantastic with great structure. Average birth weight on 18 sons is 79 pounds out of mature cows. The 9D is sire to sale bulls, 3X, 4X, 30X, 50X, 52X, 53X, 90X, 92X, 103X, 116X, 121X, 126X, 131X, 132X, 140X, 147X, 161X, 180X and 202X

The Pinebank SE 9D and 10D are $\frac{3}{4}$ brothers, they are out of a flawless old cow that stayed in production for many years. She was my favorite cow when I visited the Pinebank herd in New Zealand. You see the cream rises to the top with time. I believe that even when people are uncertain about what bull or cow to concentrate on, just by looking at a pedigree and knowing the number of good proven cows and bulls in it, it is a good yard stick on what the offspring will do. Both the Pinebank SE 9D and 10D both look fantastic with great structure. Average birth weight on 8 sons is 81 pounds out of mature cows. The 10D is sire to sale bulls, 20X, 28X, 36X, 53X, 59X, 94X, 118X, and 137X.

Sire to DDA Pondera 10U

The DDA Pondera 10U is a bull that was sold at our 2018 sale and we had the opportunity of buying him back. He has grown into one of my favorite herd sires. He was a younger and smaller bull that I threw into the multi sire breeding group that ended up siring many calves. This tells me a lot about a bull when he is capable of that. He has Lodge of Wye in his pedigree many times. Also mother to our great DDA Galetea 859 who is mother to a herd bull we used heavily for multiple years, DDA Great Plains 57R. The DDA Galetea 031 is also the mother to our DDA B&T 18K. Buy sons of this great young sire with confidence they will sire some of your very favorite daughters. The average birth weight on 10 calves selling is 75 pounds out of mature cows. He is the sire to 62X, 64X, 67X, 72X, 77X, 82X, 115X, 160X and 168X.

DDA Sandy 308	Shoshone 130-6357
	D D A Melisa 545

Every time I look at our 29R, I have to say WOW. He is very correct, very masculine, very soft temperament to people and very complete in the breeding pasture. His mother was a flawless DDA Emblazon 27C daughter, who was almost perfect on udder quality. On the dam side of this great pedigree is our Sandy cow family. This is the same as our DDA Sandy 404 cow who is in many of our great maternal pedigrees. Unfortunately this summer it appears as he broke his tool. I have not had him checked at this point, but it is a tough job that we ask our herd sires to do and it is not unusual to have some of our favorite sires injured. It is important to me to run our bulls the same as our good commercial customers. Average birth weight on his 11 sons selling is 82 pounds on mature cows. Sons selling are 2X,, 13X, 21X, 22X, 26, 27X, 40X, 69X, 85X, 96X and 149X

Mother to 77U

It is sometimes interesting to see what sires rise to the top of our multi sire breeding group. To no surprise the DDA Great Plains 77U has passed the test. His mother is a full sister to our great DDA Lodge E5H. Of course she is out of our DDA Melisa 824, also the mother to DDA Emblazon 27C. For anyone that has studied our program know that the 824 cow is in almost every pedigree we own, many multiple times. She was that good of a cow. For those of you that know the OCC program well many say the OCC Great Plains 943G is the best cow maker to ever come from that famous program. The average birth weight on his 10 sons selling is 73 pounds. Sons selling are 18X, 54X, 73X, 76X, 81X, 99X, 119X, 123X, 127X and 151X.

I was visiting with one of our customers, Linda Lawrence. She was telling me about the 91N bull that she purchased from us in 2015. She said he had earned his worth while breeding in mountains of Wyoming. He spent summers breeding cows at 8,000 feet and always came home in good condition. His feet were in almost perfect condition. After our phone conversation I decided to look at his pedigree. The 91N bull's sire DDA Pinebank 50H. His dam is a good 21X daughter, who is still in production now at 15 years old. So I made another call and made her an offer to buy the DDA Athabasca 91N back. No doubt it was the right decision. Average birth weight on his 7 sons selling is 80 pounds on mature cows. Sons selling are 25X, 83X, 95X, 102X, 107X, 135X and 158X.

The Pinebank herd in New Zealand is known for producing cattle that are very structurally correct, with great feet and fertility. DDA Hodge 3X would be no exception. I have great marks on this good Pinebank SE 10D son. The Hyland BC has also left some of our favorite cows in our herd. Great pedigree. You will want to save every daughter this great bull produces. We have very good marks on this young bull.

The sire to this great bull ran in the mountains of Wyoming for numerous years. He was in elevations of over 8000 feet and did very well. He had flawless feet and that were never touched. He was very much a survivor. Unfortunately he froze his scrotal and he came back home about 3 years ago to live out his final days. We have brutal wind chill factors that we deal with here in northern Montana. I see a ton of good in this great pedigree; you will want to save every daughter the DDA Athabasca 25X sires.

Here is another great 9D son out of a sire that left some of our favorite daughters, Hyland BC 0668. Cows that are trouble free and stay in production for many years are what is most lacking in the Angus breed today. You will find that Diamond D Angus has focused on the traits that make a cow last for over 50 years. In other words, it is not a new direction for us. We wrote "very good" across the board on our critique list for this bull.

The Pinebank SE 10D is a ¾ brother to our 9D who were both bought from Sustainable Genetics. The 10D sired the most calves in this calf crop. This tells me that he was the most fertile and most aggressive sire we had in our multi sire breeding group. He has great depth and perfect feet. We feel many cattle in general have been bred for that perfect EPD number and the functional traits largely ignored, so feet have suffered greatly in many herds. This is a bull that will correct a serious foot problem. We scored the DDA Hodge 30X very good across the board in our critique.

If you think the Pinebank genetics would work for you, don't miss this opportunity. This good bull is straight bred Pinebank on sire side and out of a mother that is sired by a 100 percent Pinebank bull. He will have depth, Length and fertility. The Pinebank herd is the only herd in the world, that I am familiar with gives a guarantee on feet. I know the 9D and 10D both have perfect feet. This good bull also has great cows on the bottom of this pedigree. The DDA May 059 is also the mother to 88U who we are using as a herd sire. The DDA May 059 is a paternal sister to our great DDA Melisa 824. The 059 cow had 17 calves here at Diamond D Angus and never missed an opportunity. We never keep cows that miss an opportunity.

The DDA May 059 had 88U when she was 17 years old. She is a paternal sister to our great DDA Melisa 824. If you want trouble free, long lasting cows it is necessary to choose a bull from a herd where these traits are selected. The DDA May was a model cow with great feet and structure. No cow is ever kept if she misses a calf. So all cows in our herd have a proven record of raising a calf every year.

This pedigree is loaded with proven old cow making genetics. PBC 707 1M F0203, many times, our DDA May 059, who is also the mother to our 88U, an upcoming sire at Diamond D Angus. She was 17 years old when she gave birth to our 88U. Also our proven old DDA Melisa 824 showing up. She is mother to DDA Emblazon 27C and DDA Lodge E5H. She stayed in production for 20 years.

If you like our DDA Melisa 824. Take a look here, she is in the pedigree of DDA At&t 41X four times in 4 generations. No question on what his daughters will look like. Having a pedigree like this may hurt the performance of 41X as an individual, however his sons and daughters will way out perform what he did. That is, if he is used on cattle that do not have the DDA Melisa 824 already in the pedigree.

When I think about the DDA Bar Lad 177U, there is no doubt about the function and longevity in this great pedigree. DDA Hana 940 cow did her job for 20 years, her mother did her job for 22 years. This does not happen unless you select for function and longevity. In fact most traits that EPD numbers measure are antagonist to function and longevity. We also wrote "very, very" soft temperament on this young bull and you will want to save every daughter he produces.

Some seed stock producers have recognized the need for more function and longevity. Very few have stacked generations of good trouble free cows like Diamond D Angus has. My father used to say, do not make very many mistakes in breeding. It takes sometimes 10 or more years to realize your mistakes. So before using a bull make sure it comes from a herd that has a proven track record of this type of selection.

Another great 29R son. We wrote "very good" in all categories of our critique list. We also wrote "great depth" in comments. Trouble free and longevity do not happen by accident. It has to be selected for. Diamond D Angus was selecting for it in 1988 when I came home to work on this ranch. My father always said we will continue to select cattle with this in mind whether we ever sell another bull or not. He would add, "At least we would have a good bunch of cows". I see many of those cows in this pedigree.

 DDA Zelda 3102

We have very few Emulation N Bar 5522 daughters in the herd. This may have been a mistake on our part. We have always known the good in these cattle; however we were afraid of the reputation on temperament that they received. Here is a bull that also traces to 5522 multiple times on the sire side. We marked him as "very good" on temperament. Temperament is a trait in which we have been very critical of. If you like the qualities that the 5522 offers, mixed with good old Diamond D Angus genetics, do not pass this one up.

The DDA Bar Lad 80X has a mother with a deep pedigree of trouble free, long-lasting genetics. Grandmother Zelda 234 DDA stayed in production for 18 years, Zelda 902 for 15 years, one more generation back is our 580 cow, she stayed in production for 20 years and her mother 22 years. If anyone has any doubt whether function and longevity is very highly heritable, please look at this. We also wrote "very good" across the board in our critique on this great bull. His sire also offers outstanding function and longevity. He traces to the great Southolm Bar Lad 50D too many times to count.

Wow, Hyland BC 0668 is the grandsire on both sides of this great pedigree. The DDA Surgeon 77X traces to Lodge of Wye too many times for me to count. He also traces to our DDA Melisa 824, several times. Buy this bull with confidence! He will produce some of your favorite mother cows. Due to his intense line breeding, he will sire calves that perform much better than himself. That is if you use him on unrelated females.

What an outstanding pedigree. We just lost our DDA Ginny 458 cow last year at 16 years old. We chose her last bull as one of our herd sires. Proven old cows that do their job year after year with no problems is what we select. So with that in mind, choosing bulls out of cows with many proven cows in the pedigree will reduce the chance of problems. Not just this pedigree, it is every pedigree that we sell offers this type of selection. We wrote "very good" across the board on the DDA Right on 86X.

We have "very good" across the board on our critique list for the good DDA Blue Print 29R son. We also wrote "good depth" in our comments. This is a combination of genetics from the best herds in New Zealand and Diamond D Angus. Sean and his family at Resurgam Angus and the Falloon family at Pinebank Angus both have outstanding, pure New Zealand Angus with no American influence. Both herds are known for great feet and structure. We have "very good" across the board on this great 29R son. We also wrote "good depth" in comments.

I believe you will love these Pinebank 10D sons. The 10D is a ¾ brother to 9D. Looking at bottom of this good pedigree is also proven old cows. DDA Galatea 031 stayed in production for 17 years, she was a model cow that was very feminine and fertile. On very bottom is our DDA Ginny 832 who was maybe my favorite cow in that time frame. She was a very deep bodied cow with great fleshing ability. Unfortunately we lost her at 12 years old. She got on her back in a ditch and died. She was also a donor cow at that time.

Grandmothers on both sides of this pedigree are model cows. The DDA Holly 102 is ten years old and a paternal sister to our DDA B&T 18K. Like most pedigrees here at Diamond D Angus, I find a ton of function and longevity. Our DDA Fahren 5Z traces to our 580/368 cow family. The Miss Diamond Jumbo 587 is a paternal sister to the 580 cow on bottom. The Sandy 404 is the mother to Sandy 308, and a daughter of the 587. She stayed in production for 22 years. We also have Banjo, and Fahren. No question this good bull will sire outstanding daughters.

Trouble Free 99X is our DDA Emblazon 27C, so the Great DDA Melisa 824 is in his pedigree twice. Also tracing to our 580/368, cow family and Banjo 1101 who is full brother to our DDA Sandy 404. We wrote "verThis has been one of my favorites since he was a calf. Grandmother on the sire side is a full sister to our DDA Lodge E5H. The Jad Fremont Z6306 produces beautiful mother cows. On the very bottom of the DDAy good" across the board in our critique.

It is amazing how often the good old standby sire and dams show up in a pedigree. We have spent over 50 years getting rid of any animal that gives problems. The result is less problems. Maternal grandsire is our DDA Banjo 1101, he is also sire to our DDA B&T 18K and full brother to DDA Sandy 404. The DDA Fahren 5Z is a bull that spent most of his life in a commercial herd and we bought back. He is a descendant of our 580/368 cow family that I talk about so much. Almost every animal in our herd traces back to this great cow family somewhere. On the very bottom of pedigree is Zelda 052 DDA, she also is a dependent of the 580/368 cow family. We have "very good" in all categories of our critique list, in comments I wrote "very deep and thick".

Writing these remarks about our sale bulls gives me the chance to study pedigrees. Sometimes it is interesting the combinations that work well. This bull is one of the bigger bulls we are selling. However, he has a bunch of goodness in him. I see Shoshone 130 many times. He is the sire to cows like DDA Melisa 824 and DDA Ginna 850, both show up in this pedigree. Save every daughter this great bull produces, you will love them. We wrote "very good" across the board on our critique.

Again we write "very good" in all categories of our critique list. As I have mentioned before, I believe there are many advantages to buying a bull back from a customer after the bull has spent some time proving themselves in a commercial herd. The DDA Athabasca 91N was put through a very tough test in a commercial herd in high elevations of Wyoming. Buy this DDA Athabasca 102X with confidence he will sire outstanding mother cows.

DDA Hodge 103X

DDA Melisa 534 Dda Galatea 031
 DDA Melisa 050 Hyland BC 0668
 DDA Melisa 434

Grandmother on the bottom side of this pedigree is line bred back to our great old DDA Melisa 824 cow. The maternal grandsire is from proven longevity and functional genetics also. DDA Galatea 031 is also the mother to our DDA Galatea 859 cow that was as flawless as cows can be. The DDA Banjo 1101 is full brother to our proven old DDA Sandy 404 cow. The Pinebank herd has bred for soundness and fertility for many generations. When I talk about soundness, they are the only herd in the world that guarantees against poor feet. Diamond D Angus will in the future offer that same guarantee. We are almost there now.

One of my greatest regrets in recent years is not getting a photo of the DDA Sandy 931, she was a flawless DDA Emblazon 27 C daughter. That makes the DDA Sandy 1107 line bred to our great DDA Melisa 824. That gives me a goal to at least get a good photo of the DDA Sandy 1107, a daughter still in production at 10 years old. We do have good photos of a son we used heavily, DDA Blue Print 29R. Due to the fact DDA Tina 720 is a young 4 year old 21X daughter she will undoubtedly turn into a very good cow. You see, she is too young to know for sure. My father used to say we judge a bull by how many good daughters a sire has left in our herd. The 21X has left many.

After visiting the Pinebank herd in New Zealand many years ago, I liked most of the cattle I saw. I also believe in their ruthless criteria that they have chosen their genetics. One thing that really impressed me is the number of old granny cows they had. The mother to Pinebank SE 9D and 10D are the same cow. She was a cow that I remember well. I forgot I took a photo of her until Bill Hodge reminded me that one of the photos he had, I was the one that took it. Then I went from not interested in these bulls to very interested. They both were out of the old granny cow that I took the photo of. Please help yourself and consider one of these good Pinebank sired sons.

If you would like to raise great mother cows, it would be hard to go wrong here. The Pinebank SE 10D and 9D are at least ¾ brothers. When I was in New Zealand, his mother was my favorite cow. One of the many reasons why I liked her so much is because she was an old proven cow at that time. Sustainable genetics gave me the opportunity to own both bulls. It is easy to see it was the right decision. The maternal grandsire also has Pinebank in the background. Buy DDA Hodge and keep every daughter he sires.

I love this pedigree. The mother to DDA Athabasca 135X is still in production at 11 years old. The mother to 91N stayed in production for 12 years. On the bottom of pedigree you have our DDA Melisa 824 and DDA Banjo E2B. The E2B is a full brother to our DDA Sandy 404. She lasted 22 years in production and her mother Diamond Henretta 368 also 22 years. The DDA Zelda 421 for 14 years and back to our 580/368 cow family again.

This great Pinebank SE 10D son earned "very good" comments across the board on our critique list. We also wrote "deep" in the comments. I see the DDA Hodge 147X has a mother that is line bred back to our DDA Melisa 824. She also traces to our 580/368 cow family. With the Pinebank SE 10D as his sire, I have no question about the ability to sire great replacement daughters.

In order to increase the likelihood of producing good, trouble free, long lasting females, it is necessary to use genetics that have a long history of doing just that. There are few herds in the world that have been doing it as long as Diamond D Angus has. For many years it was not fashionable. To say the least it was difficult through the 90s to sell our philosophy. I am very glad we did not waver. I see DDA Sandy 931, DDA Emblazon 27C, PBC 707 1M F0203, Shoshone 130 and back to Fahre, Bear, Bartor and our 580/368 cow family all in this pedigree.

 DDA Gretta 009 Hyland BC 0668
 DDA Gretta 848

The Hodge 202X ended up with a number that does not match his birth date. This is a bull that if you have been thinking about Pinebank genetics, he is $\frac{3}{4}$ bred Pinebank. No question about feet quality, depth and length of body, or fertility. The Pinebank herd was feeding forage only before it was even thought of here in the USA. The grandmother DDA Gretta 009 is still in production at the age of 12 years old. She is a Hyland BC 0668 who is sire to some of our favorite cows. This good bull may be the last bull in the catalog, but I assure you he is not last in quality. We wrote "very good" across the board on our critique list.
