

AT THE RANCH ABSAROKEE, MT LUNCH NOON | SALE 1:00 PM MST

The background of the entire poster is a photograph of two brown and white calves standing in a field of straw. The calves are facing right, with one slightly ahead of the other. They have thick, muscular builds and distinctive white markings on their heads and chests. The straw is dry and yellowish, covering the ground. In the background, there are some metal fence posts and a blurred view of more cows or a field.

7TH ANNUAL PRODUCTION SALE 3.10.23

L BAR W
CATTLE
COMPANY

L BAR W CATTLE COMPANY

THE PINNACLE OF
HEREFORD GENETICS

SALE LOCATION

The sale barn is located at 21 Red Barn Lane, Absarokee. Take Hwy 78 to Absarokee approx. 10 miles from Columbus, sale barn will be on your right. Columbus is 45 miles from Billings, MT and 90 miles from Bozeman, MT via I-90

VIEWING

Sale Cattle will be on display starting Thursday the 2nd thru sale day. The offering will be sold via video by CCI.live. A copy of the video will be available after February 28, 2023 by contacting us or see it at **CCI.live** or **www.lbarw.com**

SALE TERMS & CONDITIONS: Terms of the sale are cash unless prior arrangements have been made. Every lot will be sold to the highest bidder with the auctioneer settling disputes as to bids. All cattle are the buyer's property as soon as sold. All announcements made from the auction block on sale day by the owner or auctioneer will take precedence over statements in the sale catalog.

Guarantee: Every animal in this sale is, to the best of our knowledge, free from any disease or defect. All animals are guaranteed breeders. We guarantee the first 60-day breeding season, not to exceed 6 months from the delivery date. If an animal fails to breed after a period of six months, it may be returned to the seller in good condition and in compliance with Montana Health Regulations. The seller reserves the right to try said animal for six months and if it proves to be a non-breeder, either an animal of comparable value will be substituted or credit will be given in a future sale on an animal for animal basis. All pregnant females are considered breeders. No other warranty of any nature is express or implied.

Health: Each bull will pass a semen test before leaving the ranch. The health of the herd is excellent. We guarantee that all sale cattle will be able to ship to any state, Mexico or Canadian province. All females are officially calf hood Bangs vaccinated. All cattle are on a pre-conditioning program and herd health program.

Feed Arrangements: Bulls will be fed until April 1 at no cost. After said date, buyers will be charged for feed until delivery, at buyer's risk.

Delivery: Free delivery within 1,000 miles on purchases exceeding \$5000. Additional delivery beyond 1,000 miles will be charged at cost to central points anywhere in United States. For Canadian buyers, we will deliver up to nearest points of entry. Reputable purebred livestock haulers will be contracted for delivery.

Liability: All persons attending the sale do so at their own risk. Neither the owners nor any person associated with the sale assumes any liability, legal or otherwise.

Semen Interest: L Bar W retains the right of a ¼ in-herd semen interest in all bulls selling

Accommodations: Ask for the L Bar W Sale Rate at the Super 8, Columbus – 406-322-4101

Numerous other accommodations available in Billings and Bozeman, Montana

2023 HERD HEALTH

All bulls received a breeding soundness exam on January 26, 2023, by Dr. Lacey Fahrmeier of Stillwater Veterinary Clinic. Scrotal measure listed in catalog were taken at this time.

BULLS

BIRTH: Calf Guard, Alpha C&D, & Multi-Min

BRANDING: Inforce 3, Ultrachoice 8, Multi-Min, & Pink Eye

PRE-WEANING: Pyramid 5 Plus Presponse, UltraBac 7 w/ somubac, & Multi-Min

POST WEANING: Pyramid 5 Plus Presponse, UltraBac 7 w/ somubac, poured with Ultra saber, and drench with Valbazen.

MID DEVELOPMENT: Multi Min and Cleanup pour on. All bulls received 2 rounds of Fusogard Foot rot vaccine
Breeding Soundness Exam: Bovishield Gold FP5VL5 & Ultra Boss pour on

FALL ET HEIFERS

BIRTH: Calf Guard, Alpha C&D, & Multi-Min

BRANDING: Inforce 3, Ultrachoice 8, Multi-Min, & Pink Eye

PRE-WEANING: Pyramid 5 plus Presponse, Pink Eye & Multi-Min

POST WEANING: Pyramid 5 plus Presponse, UltraChoice 8, and drench with Valbazen.

PRE-BREEDING SHOTS: By sale time heifers will have received 2 rounds of Bovishield Gold FP5VL5 and poured with Dectomax Pour-on. They have been freeze branded to match tattoo numbers

9 YEAR OLD PAIRS

Cows are on a spring breeding vaccination protocol with Bovishield Gold FP5VL5. They were poured with Dectomax December of 2022. Their calves at side have received the following at birth: Calf Guard, Alpha C&D, & Multi-Min

Welcome friends to our seventh annual L Bar W Cattle Company 2023 production sale. We see an industry wide turn around occurring this year as we come out of the drought and supply chain problems diminish. The domestic cattle business will be expanding their herds which were reduced during the drought. This will lead to growing demand for replacement females as well as bulls. We believe that Hereford cattle will be instrumental in attaining this growth. Hereford bulls on black hided cows, the best cross in industry, will lead this expansion.

As you walk through the pens, you will find that the quality of this class goes well into the offering as a sure sign that our program is working for you the commercial cattleman. You will see length, structural correctness, consistency, docility and just good looking Hereford cattle.

We continue to work to provide the latest genetics in our herd which is focused on traits which will maximize the dollar in your pocket. We are focused on improving marbling and the ribeye scores in conjunction with performance parameters in the upper quartile. We ultrasound all our bulls and participate in the Hereford Feedout Program. We feel the data derived from this investment will yield improved output in the coming years.

All our bulls have been fully vaccinated and given a full health check and are fully guaranteed.

If you have any questions, please feel free to contact Carl, Mike or Denise.

Thank you for participating in our sale and we look forward to seeing you.

Mike and Jeannette Walen, Carl and Denise Loyning

The Power of Genomically Enhanced EPDs

The American Hereford Association (AHA) has embraced the use of genomics into their genetic evaluation by launching a first of its kind single step analysis that utilizes the marker effects of specific traits. Likewise, AHA is directly estimating accuracy values rather than approximating. The direct estimation of accuracy results in a more conservative value but a more accurate value than previous methodologies. The AHA is producing the most reliable genetic evaluation that is supported by Whole Herd TPR™ and genomics, which will give prospective buyers added confidence in purchasing young and unproven animals.

Buying animals that have a genomic profile incorporated into their Expected Progeny Difference (EPD) offers many advantages that allow for quicker breed and herd improvement. Below is a table showing the average increase in accuracy when buying a young animal with a Genomic Enhanced EPD (GE-EPD) versus an animal without a GE-EPD. Similarly, an effective progeny number increase is listed by trait that shows how many progeny equate to a genomic enhancement of a young animal (e.g. yearling). That's right, buying a young animal that has been genotyped is like having 2-17 progeny, depending on the trait. The proof gained on young, non-parent animals, through a genomic enhancement is valuable and greatly mitigates the risk and allows for more directed selection.

Each animal tested is recognized with the AHA GE-EPD logo.

AHA Trait	Accuracy Improvement	Effective Progeny Number Increase*
Calving Ease	0.09	17
Birth Weight	0.12	8
Weaning Weight	0.14	12
Yearling Weight	0.16	9
Scrotal Circumference	0.17	6
Mature Cow Weight	0.12	4
Udder Suspension	0.17	7
Teat Size	0.17	7
Carcass Weight	0.11	3
Fat	0.08	2
Rib-Eye Area	0.07	2
Marbling	0.10	3

* Effective Progeny Number Increase (EPNI)- EPNI is the difference gained for genotyped animals versus non-genotyped animals.

L-W WOW!! Phenotypically this stud could be the best straight Line One bull. He is a stout made red to the ground powerhouse. His donor dam 1179Y, was a solid investment for us as she never misses a beat. She is still in production at the age of 12. We have a set of ET calves on the ground that are going to be something special. Owned with Bowling Herefords, OK

L-W Our decision to keep a half possession of 901G was probably the best thing we have ever done. He has proven to be a solid replacement for his now deceased sire 6128D. He is adding thickness, hip and depth to his progeny. We are super excited about his future here and at Fawcett Elm Creek's.

L-W We were able to purchase half possession of 9108G in Cooper's 2020 sale. 9108G is a really powerful 7156E son that is short-marked, good pigmented, outstanding balance, and has lots of muscle and substance. He has a big top and his muscle carries down into his lower quarter. 7156E is a moderate made bull that they have used successfully on mature cows and heifers. 9108G should follow in his footsteps as a very complete, well-structured bull with unlimited potential. We expect his daughters to be moderate, thick made, and good uddered. Owned with Johansen Herefords, UT and Cooper Hereford Ranch.

L-W Our choice from Holden's 2019 production sale. He is red to the ground, deep sided and thick made. He offers a great EPD profile and the phenotype to match. His daughters are going to be great cows, with excellent udders and teats. Now owned by Harper Herefords, MT

YEARLING BULLS

This group of yearling bulls represents our top 2/3rd of our 2022 calf crop. We again scanned the bulls for carcass data end of January so please note that the EPD's were current as of 1/31/2023, they did not have the updated carcass data calculated as of this date. Updated EPD's will be available March 1, on our website www.lbarw.com.

We take pride in raising our bulls in a commercial cattleman's environment. Therefore their individual data are actual birth weights and weaning weights are from August 22, 2022. These bulls are developed on a high roughage ration of dryland alfalfa hay, corn and a complete amino grower pellet under the direction of Josh Stroh and Calvin Bacon of Hubbard Feeds. Our avg. daily gain on a 120 day test period was 3.3lbs.

FACES OF LEADERSHIP CONFERENCE

Summer of 2022

When Amy Cowan reached out to us and asked us to be a stop for the NHJA Faces of Leadership Conference in August of 2022, we said without a doubt, YES! We welcomed junior members from all over the United States. This is such a great opportunity for the youth of our industry to get out and see other parts of the country and operations. They are an amazing group of individuals, with such passion for the breed and our industry. When you look at the group picture that is the future of the Hereford Breed, and it's a very bright future. Thank you to the NHJA for allowing us the opportunity to showcase our operation.

18 MONTH OLD BULLS

Here is a select opportunity to get your hands on an outstanding set of 18 month old bulls. This offering is made up of only ET calves. When we decided to flush 3070A to the Belle Heir bull we were hoping to produce a set of elite progeny, and I think we hit the name on the head. It is hard to write individual notes about each of them as they are so uniformed not only in phenotype but in EPD profile as well.

18 MONTH OLD HEIFERS

EXPLANATION OF BREED EPDS

CALVING EASE — DIRECT (CE)

CE EPD is based on calving ease scores and birth weights and is measured on a percentage. CE EPD indicates the influence of the sire on calving ease in females calving at 2 years of age. For example, if sire A has a CE EPD of 6 and sire B has a CE EPD of -2, then you would expect on average, if comparably mated, sire A's calves would have an 8 percent more likely chance of unassisted calving when compared to sire B's calves.

BIRTH WEIGHT (BW)

BW EPD is an indicator trait for calving ease and is measured in pounds. For example, if sire A has a BW EPD of 3.6 and sire B has a BW EPD of 0.6, then you would expect on average, if comparably mated, sire A's calves would come 3 lb. heavier at birth when compared to sire B's calves. Larger BW EPDs usually, but not always, indicate more calving difficulty. The figure in parentheses found after each EPD is an accuracy value or reliability of the EPD.

WEANING WEIGHT (WW)

WW EPD is an estimate of pre-weaning growth that is measured in pounds. For example, if sire A has a WW EPD of 60 and sire B has a WW EPD of 40, then you would expect on average if comparably mated, sire A's calves would weigh 20 lb. heavier at weaning when compared to sire B's calves. Yearling Weight (YW) YW EPD is an estimate of post-weaning growth that is measured in pounds. For example, if sire A has a YW EPD of 100 and sire B has a YW EPD of 70, then you would expect on average if comparably mated, sire A's calves would weigh 30 lb. heavier at a year of age when compared to sire B's calves.

MATERNAL MILK (MM)

The MM EPD of a sire's daughters is expressed in pounds of calf weaned. It predicts the difference in average weaning weights of sires' daughters' progeny due to milking ability. Daughters of the sire with a +14 MM EPD should produce progeny with 205-day weights averaging 24 lb. more (as a result of greater milk production) than daughters of a bull with a MM EPD of -10 lb. (14 minus -10.0 = 24 lb.). This difference in weaning weight is due to total milk production during the entire lactation.

MATERNAL MILK & GROWTH (M&G)

The M&G EPD reflects what the sire is expected to transmit to his daughters for a combination of growth genetics through weaning and genetics for milking ability. It is an estimate of the daughter's progeny weaning weight. A bull with a 29 lb. M&G EPD should sire daughters with progeny weaning weights averaging 19 lb. heavier than progeny of a bull's daughters with a M&G EPD of 10 lb. (29 minus 10 = 19 lb.). It is equal to one-half the sire's weaning weight EPD, plus all of his MM EPD. No accuracy is associated with this since it is simply a mathematical combination of two other EPDs. It is sometimes referred to as "total maternal" or "combined maternal."

RIBEYE AREA (REA)

REA EPDs reflect differences in an adjusted 365-day ribeye area measurement based on carcass measurements of harvested cattle. Sires with relatively higher REA EPDs are expected to produce better-muscled and higher percentage yielding slaughter progeny than will sires with lower REA EPDs. Ultrasound measurements are also incorporated into this trait and have been shown to be highly correlated with the performance of slaughter progeny. All data is expressed on a carcass scale.

MARBLING (MARB)

MARB EPDs reflect differences in an adjusted 365-day marbling score (intramuscular fat, IMF) based on carcass measurements of harvested cattle. Breeding cattle with higher MARB EPDs should produce slaughter progeny with a higher degree of IMF and therefore higher quality grades. Ultrasound measurements are also incorporated into this trait and have been shown to be highly correlated with the performance of slaughter progeny. All data is expressed on a carcass scale.

BALDY MATERNAL INDEX (\$BMI)

The BMI\$ is a maternally focused index that is based on a production system that uses Hereford x Angus cross cows. Progeny of these cows are directed towards Certified Hereford Beef. This index has significant weight on Sustained Cow Fertility, which predicts fertility and longevity of females. There is a slightly positive weight on Weaning Weight, Mature Cow Weight and Milk which accounts for enough growth but ensures females do not increase inputs. There is some negative emphasis on Dry Matter Intake, but a positive weighting on Carcass Weight which is anticipated to provide profitability from finishing of non-replacement females and castrated males. Marbling and Ribeye Area are also positively weighted to keep the harvested progeny successful for CHB. This index is geared to identify Hereford bulls that will be profitable when used in a rotational cross with mature commercial Angus cows.

CERTIFIED HEREFORD BEEF INDEX (\$CHB)

The Certified Hereford Beef Index is a terminal sire index that is built on a production system where Hereford bulls are mated to mature commercial Angus cows and all progeny will be targeted for Certified Hereford Beef after the finishing phase. This index has significant weight on Carcass Weight to ensure profit on the rail. As well there is a positive weighting for Average Daily Gain along with a negative weighting on Dry Matter Intake to ensure efficient pounds of growth in the finishing phase. Keep in mind, this production system takes advantage of complimentary breeding with the commercial Angus cow. Although Marbling is weighted positively in this index, a positive weighting for Rib-eye Area and a negative weighting for Back Fat are a greater priority in this index to allow for optimum end-product merit. This is the only index that has no emphasis on fertility. Remember that no replacement heifers are being retained.

L-W Man do we hate to let this one go. She has been an honest female from the day we got her. This 7136T daughter is a role model cow. She looks just like her dam. Her pedigree is packed with some the very best and proven Line One genetics. Her bull calf at side by 901G is going to be a herd bull for someone. We would like to flush her after the sale, at the buyer's convenience. Please contact Carl for details on flushing her.

Stand out with Proven Genetics

THE **HEREFORD ADVANTAGE** PROGRAM

Increase added market power and brand recognition with feeder cattle sired by a Hereford bull battery ranking in the top 50% for CHB\$ index.

PROGRAM BENEFITS:

- ✓ EPD ranking summary
- ✓ Added market exposure
- ✓ Genetic improvement tool
- ✓ Access to AHA resources
- ✓ Get started at HerefordFeederCattle.com

Certified Hereford Beef Index(CHB\$) is a terminal sire index that is built on a production system where Hereford bulls are used on Angus-based cows with a focus on feedlot performance and end-product merit. To qualify for the Hereford Advantage program, cattle must be sired by registered Hereford bulls with transferred ownership, and the Hereford bull battery must have a CHB\$ value ranking in the top 50%.

thank you

We have said before and we will say it again, we are so blessed to live where we do, and be involved with this industry. We are so thankful for the individuals behind the scenes that have given advice, showed up to help on picture or video day, helped haul cows home, and the list goes on. We cannot thank you all enough for everything you do for us. Thank you all, your friendship means the world to us.

In the fall of 2021 we welcomed the Romine Family to our operation and what a blessing it has been to have them here. Amanda is my behind the scenes gal and she is going an amazing job with the website, all the data entry and list goes on. I always said I needed an assistant and I finally got one. Thank you Amanda. This is Taylor's 1st year full year feeding and taking care of the bulls and he is finding his groove and I think the bulls are proof of that his year. Job well done Taylor.

We welcomed Frankie Luongo to the operation in June, and his 1st day on the job was the epic flood event that took place in our area. To say he jumped right in is an understatement. Frankie has done a great job for his 1st year in this crazy seedstock business. Frankie has kept the equipment operating at full speed this past year. Thank you Frankie

Take advantage of hybrid vigor by capitalizing on Hereford genetics.

The Maternal Advantage program generates females with added longevity, more docility, increased fertility and more profit per year.

Can be utilized by producers using Hereford bulls on British-based cows or Brahman-based cows in their breeding program.

Producers utilizing the program will have access to a sire EPD summary, added market exposure, replacement selection tools, genetic improvement tools and access to AHA resources, marketing and staff.

Qualifications

- Producers must verify that eligible females are sired by registered Hereford bulls with transferred ownership.
- Participating bull batteries must rank in the top 50% of the breed for Baldy Maternal Index (BMI\$) if used on British-based cows or the top 50% of the breed for Brahman Influence Index (BII\$) if used on Brahman-based cows.

A photograph of a sunset over a grassy field. The sun is low on the horizon, creating a warm, golden glow. A herd of cattle is grazing in the field on the left, and a person is riding a horse on the right. The sky is filled with clouds, and the overall scene is peaceful and scenic.
