Sale

Wednesday, December 2, 2020
Midland Bull Test Sale Arena • Columbus, MT

Sale Day Phone 406/ 322-5597 or 406/ 780-0176

Lunch All Day — Sale 1:00 p.m.

Auctioneer: Joe Goggins and Greg Goggins

- 30 Coming Two-Year-Old Angus Bulls
- 100 Fall Yearling Angus Bulls
- 40 Registered Bred Heifers

Accommodations

Super 8 Motel	406/ 322-4101	Columbus
Big Sky Motel	406/ 322-4111	Columbus

Health

Health of each herd is excellent. All cattle sold according to State of Montana health regulations. Individual health papers will be furnished for interstate shipment. If your state or province requires additional tests, your purchases will be cared for at buyer's risk and expense until tests are completed. All bulls are BVD-PI tested free. Semen testing is done by Dr. Brian Roe, ultrasound by Matt Lane.

Trucking

Free delivery on Angus bulls up to 400 miles. \$50 off each bull purchased if you bring your own trailer. Free delivery is not available on the bred heifers, but we can help you with arrangements.

Wintering Arrangements

Angus bulls at Midland for \$2.50 per day.

Terms

Terms, conditions and guarantees herein stated in writing shall constitute a binding contract between buyer and seller. Terms of the sale are cash or check payable at the close of the sale and prior to load-out unless other arrangements have been made with the owner in advance. Animals will be sold to the highest bidder with auctioneer settling dispute as to bid. Announcements at the sale by owner or auctioneer will take precedence over statements in the sale catalog or supplement. Each animal becomes the buyer's risk as soon as it is sold, but will be cared for by the seller until load-out or for a reasonable period of time. Everyone attending the sale does so at their own risk and Midland Bull Test Center, Big Country Breeders, or their agents assume no liability, legal or otherwise, for any accidents which may occur. Except for those specifically herein stated in writing, there are no further warranties or guarantees of any nature, expressed or implied.

Guarantee

Every animal in this sale is, to the best of our knowledge, free from any disease or defect.

Mortality Insurance Available through

John Goggins 406/ 373-5000

Genomic Enhanced EPDs

All bulls have been Genomics tested through Angus using Neogen GS tests except Lots 69-70-136. Submitted but still waiting for results are Lots 95-96-127-128-129. EPDs are current as of November 6, 2020

First Breeding Season Guarantee

All bulls selling for \$2,500 or more will be covered 50% by seller if they are injured during the first breeding season. Breeding season is defined as the 60 day period following the first turnout of bulls. 50% of the value of the bull up to \$8000 in purchase cost, minus one-half salvage value will be given as credit in a future Beef Country Sale or towards a replacement bull if one of equal quality is available by seller. All injured bulls must be diagnosed by a veterinarian. Please notify us as soon as possible should injury occur and prior to the injured bull being sold for salvage. All claims must be made by September 1, 2021. This guarantee does not replace mortality insurance and does not cover loss due to death or other natural occurrence or negligence. Mortality insurance is available sale day.

Thank you for considering our breeding program and bulls.

Welcome to our December Sale!

There is nothing more core to making a ranch work right than a sound, fertile, functional cow that will stay in the herd and convert grass to pounds weaned in her calf.

We also continue to believe and become more convinced every year that breeding true efficiency backed by large, collected data sets for intake, offer the industry the greatest opportunity to change and improve the profitability of our business. Environments will only allow for so much weaning weight to be expressed without changes in management or additional supplementations. That is why we put so much emphasis on RFI and on maternal production and longevity. With disciplined selection it has been proven numerous times and in multiple countries that one can reduce grass and hay consumption by up to 20% without effecting weaning weights.

We continue to progeny test our efficiency sires and last year in 2019 we tested 188 steers at Simplot near Grandview, Idaho. We tested 3 of our efficiency sires against 12 other Angus & Simmental sires. The steers were weighed on at about 950 lbs. and our top 2 efficiency sires converted at 5.11 lbs. feed and 5.23 lbs. feed/ lb. of gain. The 12 other sire's steers converted at 6.10 lbs. That is an 18% savings on feed costs alone. The steers were all from one ranch.

The bulls selling are from our herd, with the two partnership herds of Steve & Kim Crowe and Marda Angus. MJB Angus will again have a top set of bulls and we continue to partner and share herd bulls with them. Terry and LaVonne Frost of Frosty Creek Angus have a nice set of bulls, many sired by efficiency sires.

Also, Jocko Valley Angus joined us last year and will have a nice set of bulls and 40 very fancy registered bred Angus heifers.

If you are unable to make the sale, the bulls and heifers are available to view at Columbus anytime. Video will be on our website www.McDonnellAngus.com Or call us anytime if we can be of assistance.

On behalf of Sam and I, we would like to thank everyone for your support.

Sincerely,

Leo & Sam McDonnell

Welcome to all cattlemen and women,

This has been a year of challenges and trials 2020 has not been kind to so many in so many ways. We are of the belief that the bulls offered today will bring a smile to your faces. The Frosty Creek Angus Ranch bulls continue to deliver proven genetics. The feed efficiency results continue to supersede all expectations, as well as the docility we expect in our bulls. Fall bulls definitely are guaranteed to be solid breeders.

Our mother traits have always been of major importance to us and have proven super strong as we progressed after the Bobcat Fire this year. Our girls were given a tough road with having to quickly move them four times in two days from oncoming flames. There has been less grass for us to offer them, lots of ash and smoke that continued for months. Calving was a challenge as the fire was still engulfing our property, proudly the mother cows continued to be good caretakers of their calves and offered all the milk they needed.

Our five generation family remains involved on the ranch. We are so grateful for all as they stepped up to help during our rough days. Fourteen miles of fences have needed torn down and replaced as an aftermath of flames ran through. Our corrals and barns are non existent but with terrific help we are managing to work cattle as one must during timed life expectations with these animals. Our losses were great, but our blessings of family and friends are overflowing.

Enjoy some of the photos of our cattle during the flames, and we are sure our bulls offered today are examples of the **STRENGTH**, the **LONGEVITY**, and the **SUSTAINABILITY** we offer for your herd.

Terry and LaVonne Frost

RFI (Residual Feed Intake) (lbs/day)

The amount of feed intake an animal consumes daily, above or below its maintenance requirements as well as its performance (growth) requirements. A negative RFI is a more efficient bull.

Example: -2.0 means the bull ate 2 lbs. less feed per day than he needed to meet his body maintenance requirements and production needs (ADG). With today's feed costs, that is a savings of 20 cents/day or \$36.00 per feeding period. The difference between a -2.0 and a +2.0 bull is 4 lbs. of Dry Matter Feed/Day.

If you are keeping replacement females, by selecting for negative RFI, research has shown you have the potential to save close to \$80.00 per year on cow maintenance costs.

UNDERSTANDING EFFICIENCY AND RFI

Historically, the weight of an animal has been the most important component in determining value, which follows closely with production being the most heavily promoted and taught value in agriculture.

However, when you consider that more than 75% of the cost of growing cattle is related to feed inputs, and that 70-75% of the feed consumed by cattle is solely for maintenance requirements, then the importance of improving the efficiency of feed intake becomes very real. With today's feed prices, improving a herd's efficiency of feed utilization is obvious.

WHAT DOES THE RESEARCH SAY

1. Efficiency is highly related to growth and growth is the traditional method of measuring efficiency. The problem is that using growth alone as a measure of efficiency also increases the size of the animal, which will increase maintenance requirements, which will increase appetite, which will increase the need for available feeds/grasses.
2. Using RFI will lead to improvements in feed efficiency without compounding the need for additional feeds or increasing mature size.
3. RFI allows you to produce at a level that optimizes on one's management and environment instead of stressing it.
4. RFI is a highly heritable trait, meaning that through genetic identification and then selection, one can make rapid improvements.
5. Selecting for efficiency will allow the cattle industry to become more competitive in production with swine and chicken. About 5% of the feed consumed by cattle is converted into protein, while swine and chicken are 14 and 22% respectively.
6. Research has shown there is a 0.90 correlation (very high) between bulls measured for RFI postweaning and how their daughters will perform for efficiency in the cowherd.

QUESTIONS AND ANSWERS

What is the heritability of RFI (Residual Feed Intake)?

0.28-0.50 (Moderately to highly heritable).

How is RFI calculated?

Basically RFI is looking at what the feed intake requirements for maintenance are for the individual bulls and then what the feed intake requirements are for production (each individual bull's ADG) and compares that to what the individual bull consumes.

How much difference can one expect to find in cattle?

Research from Australia, Canada, and the U.S. have consistently found differences of up to 30%.

If you have two cows weighing 1300 lbs and one produces 15 pounds of milk and the other 20 pounds of milk, wouldn't the other cow at 15 lbs require less feed?

No, and it could just as well be that the 15 lbs. milk producer is a larger consumer of feed which compounds her inefficiency on both feed intake and lower production. That's the importance of measuring RFI. This is a case where size doesn't matter.

What should one be aware of when using RFI?

First and most importantly, RFI needs to be balanced with production and profitability. A negative RFI like a negative DMI with low production is no more cost efficient than the high production with a positive RFI. You need to balance RFI with production.

Why can't we just use our eye and pick the more moderate, easy-fleshing cow?

Don't confuse size or fleshing ease with efficient productive cattle. Contrary to what some folks believe, RFI is not related to frame size, body type, or body condition. You'll find as many inefficient cows in any frame size and just because they look fat it doesn't mean they're efficient. A fat cow that is high intake with a 400 lbs calf is not going to generate much profit.

Reading Performance Information

EPDs are current as November 11, 2019.

Updated EPDs can be
viewed at www.Angus.org

Expected Progeny Difference (EPD) is the estimate of how future progeny of each sire are expected to perform in each of the traits listed.

Calving Ease Direct (CED) - is expressed as a difference in percentage of unassisted births, with a higher value indicating greater calving ease in first-calf heifers. It predicts the average difference in ease with which a sire's calves will be born when he is bred to first-calf heifers.

Birth Weight EPD (BW) - expressed in pounds, is a predictor of a sire's ability to transmit birth weight to his progeny compared to that of other sires.

Weaning Weight EPD (WW) - expressed in pounds, is a predictor of a sire's ability to transmit weaning growth to his progeny compared to that of other sires.

Yearling Weight EPD (YW) - expressed in pounds, is a predictor of a sire's ability to transmit yearling growth to his progeny compared to that of other sires.

Milk EPD (Milk) - is a predictor of a sire's genetic merit for milk and mothering ability as expressed in his daughters compared to daughters of other sires. In other words, it is that part of a calf's weaning weight attributed to milk and mothering ability.

Marbling EPD (Marb) - expressed as a fraction of the difference in USDA marbling score of a sire's progeny compared to progeny of other sires.

Ribeye Area EPD (REA) - expressed in square inches, is a predictor of the difference in ribeye area of a sire's progeny compared to progeny of other sires.

Index values are expressed in dollars per head

Maternal Weaned Calf Value (\$M) predicts profitability differences from conception to weaning. Traits included: calving ease direct, calving ease maternal, weaning weight, milk, heifer pregnancy, docility, mature cow weight, claw set and foot angle.

Weaned Calf Value (\$W) is the expected average difference in future progeny performance for preweaning merit and includes both revenue and cost adjustments associated with differences in birth weight, weaning direct growth, maternal milk and mature cow size.

Feedlot Value (\$F) is the expected average difference in future progeny performance for post-weaning merit compared to progeny of other sires.

Grid Value (\$G) is the expected average difference in future progeny performance for carcass grid merit compared to progeny of other sires.

Beef Value (\$B) is the expected average difference in future progeny performance for post-weaning and carcass value compared to progeny of other sires.

ABOVE AVERAGE GOALS REQUIRE TARGETED BULLS

Aim High

The Targeting the Brand™ logo highlights registered Angus bulls with greater genetic potential to produce calves that meet the most challenging specifications of the *Certified Angus Beef®* brand.

Only 1 in 4 non-parent Angus bulls qualify.

Minimum Genetic Requirements

Marbling EPD (Marb)	+0.65
Dollar Grid Carcass Index (\$G)	+55.0

We continue to believe that feed efficiency "in the cow herd and in the feedlot" offer the greatest opportunity for the cattle industry.

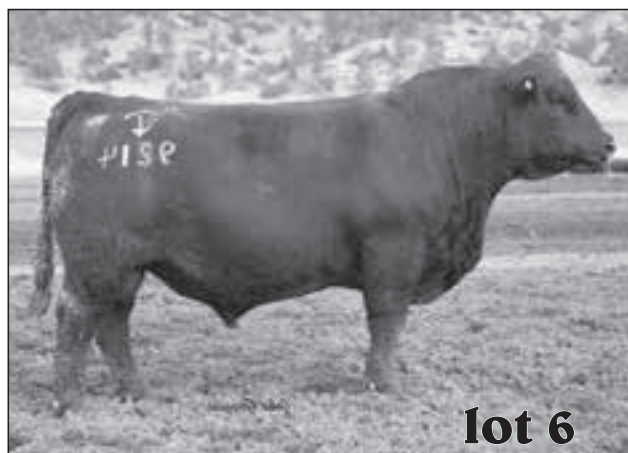

Basically, it never has been selected for so rapid improvements can be made.

Still important that the cattle fit the environment.

Discipline. Maternal Efficiency to me includes fertility-longevity-structure-problem free, udders, and teats-and efficiency in production. With 70% of feed going to just maintenance requirements and half a cows life spent in a non-production phase, there are huge economic gains to be made here and when you combine it with the right frame size you can compound those profit margins.

Look at the lbs./acre or unit and not just the lbs. weaned/cow.

If you get a 20% improvement in feed efficiency across the board by utilizing this technology and consider a five hundred dollar average feed cost per cow, which we see in the industry in a lot of places, then if you save 20% that's one hundred dollars that you're saving per cow that goes back into your pocket," explains Tommy Perkins Ph.D., PAS of West Texas A&M University and a member of the GrowSafe Strategic Advisory Committee as he discusses the use of feed efficient genetics to manage and reduce input costs. Feed Efficiency doesn't have anything to do with frame size.

- Tommy Perkins, GrowSafe • April 7, 2020

Few management techniques can be offered to beef producers that yield a 10 to 15% improvement in production efficiency. By stacking generations selected for RFI improvement greater than 20% in production efficiency can be achieved.

- Dr. Monty Kerley,
University of Missouri

What are the benefits of selecting for low residual feed intake (RFI) animals*

- Reduction of overall feed intake by up to 20% while maintaining the same level of production
- Reduction in the maintenance requirements of the herd by 15-20%
- Improvements in the feed conversion rates of calves of from 15-20%
- 28-50% Heritability which is high in production traits.
- 90% correlation between how a tested bull does and how his daughters do.
- Independent trait with no correlation to other traits such as fertility, milkability, performance, frame size, feet, body condition, etc. — which means you can select for this trait without having a negative impact on other traits.
- Efficiency benefits are found both in cow herd and in the feedlot.
- There is a potential to improve efficiency up to 20-25%.
- Feed & grass costs are the #1 expense in raising cattle, after fixed costs.
- 70% of feed is used just for maintenance - improving feed efficiency can have a big economic impact.

NEW GENERATION OF PERFORMANCE

We have maxed out what mother nature will allow us in weaning weights in these drier, short grass environments without heavy supplementation.

The next big advance in profitability on the ranch will be the introduction of efficiency genetics that allow a 20- 30% reduction in feed/grass inputs while still maintaining, or even increasing the same production level as one looks at pounds per unit produced.

Registered Angus Bred Heifers

The heifers were ultrasounded earlier for pregnancy status and will be pregnancy examined again on December 1st by Dr Lacey Fahrmeir at Midland.

They have been poured this fall and given a Scourguard vaccine shot. Expect these heifers to start calving 12 days early, so a May 13th bred heifer that is due to calve February 19th could very well calve starting February 7th.

For further information on the heifers, contact:

Dave Powers 616-581-6527 • Marvin Rehbein 406-546-4687 • Leo McDonnell 406-780-0176

Reference Sire

ADG - Average Daily Gain
DMI - Dry Matter Intake
RFI - Residual Feed Intake
Eff Index - measures how efficiently feed is converted to pounds of beef and ties it with RFI

It is important you only compare bulls within groups as rations vary and so does weather.

Fall bulls were tested this summer for intake.

The warmer weather sure improves their ADG and Feed Conversion.

There are 3 different test groups represented in the 2-year-old bulls. RFI are just within each group.

Coming Two Year Old Efficiency • test date 11/9/19 - 1/17/20

Lot	Final WT	ADG (lbs)	AvgDMI (lbs)	Feed Conv	RFI (lbs)	Eff Index

COMMITMENT.

Raising quality registered Angus cattle takes commitment. As your genetic supplier, we take that seriously.

That's why we participate in MaternalPlus®. Through MaternalPlus, we devote extra time to tracking maternal traits beyond those normally required, ultimately targeting greater performance and predictability.

The data we choose to gather through this inventory-based program today sets the stage for reproductive and lifetime productivity tools tomorrow — tools to pioneer new ways of selecting the most profitable animals.

Herd improvement starts with smart decisions. A commitment to the female starts with MaternalPlus.

Contact AGI at 816-383-5100 or agi@angus.org for more information.

ANGUS MEANS BUSINESS.

ANGUS
THE BUSINESS BREED
