175 Coming Two-Year-Old Registered Red Angus Bulls Will Sell!

LOT 32 CALVO CRACKERJACK 197F

LOT 2 CALVO RIPPED IN RED 157F

Welcome to our annual bull sale!

Thank you for your interest in our program. Bull sale time is one of the highlights of our year and we always look forward to meeting up with old and new customers. Getting the opportunity to speak with commercial cattlemen & cattlemen across the country is something we find great value in.

We breed these bulls to be able to fit the needs and demands of the commercial industry out making a living in the “real world”. These are the types of bulls that are going to last and breed their assigned cows' year-after-year; and ones that will sire easy fleshing, maternal females that profitable herds are built around. By having a strong emphasis in phenotype selection over computer generated EPDs, we stay focused on creating functional cattle that will flat out work. The strict breeding plans and matting strategists that has been put into these bulls is what separates them from the rest. Many in this offering our ½ or even ¾ brothers. We understand the importance of multi-trait selection for customers that are wanting to create practical cattle that convert forage into pounds. This is done by the consistency of line breeding and the use of proven cow families in our sire selection. This has also enabled us the ability to offer a large group of bulls that are uniformed. The genetic merit behind our bulls is going to shine when the progeny of them are marketed; for a large group of calves that are similar in their phenotype and genetic makeup sell for premiums. This goes the same way with consistency and predictability of your replacement heifers - knowing what to expect is something that allows our customers to have confidence in when buying their bulls from Calvo Family Red Angus.

Bull development is something we take very seriously. We feel as if it is more of an art and something that impacts how each individual bull is going to perform his entire life. Our offering of bulls has not been in a feedlot or been fed a hot ration to attain big gains. We develop our bulls slow and steady to create an honest appearance to ensure structural integrity and feet soundness. They were out on grass all summer, with plenty of room to “be bulls”. We like to develop them in similar conditions they are going to see out breeding cows. They have all been pastured together where everyone receives the same treatment. No special ration was given to poor performing bulls; for if they cannot perform under the same conditions as their contemporaries - they will be culled. We allow them to sort themselves out, and thus only the bulls with superior fleshing ability and structural correctness rise to the top. We strive to offer bulls that have met all the requirements and not been made out to be something they are truly not. We greatly appreciate the positive feedback we have received from our customers about the way our bulls have been able to perform year after year.

What to expect on sale day from the bulls:

We push to create a group that is uniformed and phenotypically attractive. We feel as if a bull is going to be a bull - he better look like it. Creating bulls that are masculine with real muscle and top shape; but yet one that is smooth made and free moving. We also put a strong emphasis on disposition, for we absolutely do not tolerate poor disposition bulls. Most of the ones in this offering qualify for the use on heifers; but we don't feel as if this has restricted the bulls in terms of power and shape. Over the years we have always selected the low birth weight bulls that have performed the best on grass all summer to clean up cows, or to even be used for natural service on a select group of females. We feel this has really started to show with the bulls we offer. Sacrificing pounds just to have an enjoyable calving season is a thing of the past. We calve in the months of May and June out on pasture. Cows and heifers are checked once a day while tagging calves; for it is very important to us that these cattle calve unassisted. However, it is just as equally important to us is the ability to perform and put on the pounds during the young stages of being on the cow. Because at the end of the day, most customers have to sell by the pound.

Again, thank you for your interest in our program. We look forward to seeing you on sale day!

God Bless,
The Calvo Family

Cowherd - Building

Profit starts at Reproduction!

Placing selection pressure on traits that will have a direct impact on your marketed product (weaned calves, yearlings, carcasses sold in the meat) can certainly increase your revenue on a per-calf basis. However, in order to achieve the higher goal of increased revenue per cow exposed, selection pressure must be placed on cowherd-building traits.

Red Angus' commitment to Total Herd Reporting allows for the measurement of each female's lifetime production history; from being exposed to breeding as a yearling, to measuring females' productive lifespan. Implementing these tools into your selection decisions will have a long-term impact on your operation's profitability.

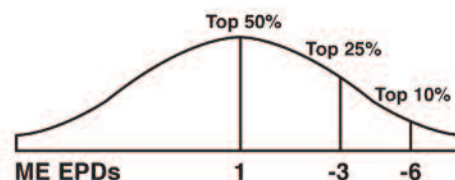

Calving Ease Direct (CED) - predicts the probability of calves being born unassisted out of 2-year-old heifers. Producers want live calves - born unassisted. Selecting on actual birth weight is flawed; it is influenced by non-genetic factors such as nutrition and weather (ambient temperature). While BW EPD removes these non-genetic factors, Red Angus' CED EPD is the best predictor of calving ease. The CED EPD includes variation in BW plus other influential genetic factors such as gestation length, calf shape, etc.

Heifer Pregnancy (HPG) - predicts the probability of heifers conceiving to calve at two years of age. Many breeds offer genetic predictions of yearling bull scrotal circumference as an indicator of age of puberty. While puberty is a prerequisite, many factors influence pregnancy rate. Red Angus' HPG EPD offers a tool which selects for what is economically relevant to ranchers - pregnant heifers.

Calving Ease Maternal (CEM) - predicts the probability of a given animal's daughters calving unassisted at two years of age. Replacement heifers should be able to calve on their own. Red Angus' CEM EPD offers the industry's most reliable prediction to address that concern. It includes not only the predisposition for a female to calve unassisted, but also her contribution to her calf's traits (birth weight, calf shape, etc.) that make it more likely to be born unassisted.

Maintenance Energy (ME) - predicts differences in daughters' maintenance energy requirements and is expressed in Mcal/Month. Recognizing that 70% of cowherd feed costs are burned up in maintaining weight and condition, Red Angus' ME EPD allows for the selection of bulls whose daughters will require less feed; thus, reducing cowherd expenses. Include selection pressure for ME EPD to ensure feed costs don't get out of line when selection is made for greater performance and production.

Dry Matter Intake (DMI) - predicts differences in daily feed intake as measured in a feedlot during the post-weaning period. (Pounds/Low value)

EPD percentiles reflect non-parent animals under two years of age.

Traits

Excel in Stayability... Excel in Profitability!

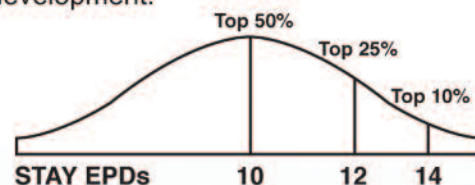

Improving Stayability enhances cowherd profitability by increasing the percentage of females that deliver pounds and value to the weaning pen without extra labor or feed – and do it year after year.

Red Angus' Stayability (STAY) EPD is a selection tool to improve overall cowherd efficiency through reducing replacement rate. Cows that stay productive, are problem free and last longer mean a larger percentage of heifers can be cash cropped, instead of developed as replacements.

How is Stayability EPD Calculated?

THR provides the foundation for a reliable Stayability EPD. Once a female enters the productive cowherd she is monitored annually for her productive ability. Only

Stayability (STAY) – predicts the probability of a bull's daughters remaining productive until at least six years of age. Why six? That's how long it takes a female to breakeven given all the expenses of development.

females that produce a calf every year up until at least six years of age are given a positive observation. Females that miss a calf or are culled for any reason including soundness, production, disposition, body condition, etc. are given a negative observation.

Mandatory collection of Stayability observations from all Red Angus herds provides ample data for the prediction of a bull's ability to sire Ranch-Tested – Rancher-Trusted cowherds.

EPD percentiles reflect non-parent animals under two years of age

View the Auction Live! Bid Online... you're ringside right at your desk!

Buying online is as easy as 1, 2, 3...

1. Create an account at www.DVAuction.com under the "Register" tab
2. Apply for bidding approval by clicking on the "details" tab at least 24 hours prior to the auction – a DV representative will notify you once you have been approved.
3. Tune in for the sale to may your purchases!

High Speed internet is required for successful bidding-be sure to check the lag-time monitor in the top left corner to ensure real-time broadcasts.

Proxy-bidding – if you can't make time to watch the sale, register a proxy bid and let our system represent your bid while you're away. Look for the "proxy bid" tab on the auction listing, and fill in your maximum bids. We'll handle the rest!

For General Questions Please contact Our Office: 402-316-5460 or support@dvauction.com

We are not cattle multipliers... We are cattle breeders.

We do not breed for numbers, we breed for a specific brood cow. Our definition of a “brood cow” is a feminine female that carries natural fleshing ability, is structurally correct, has excellent udder quality, can wean off at least 50%, and still breed back early every year.

These cows allow us to keep our operating expenses low and increase our profitability.

To achieve this, we believe in only selecting bulls from proven cow families to use in our program. We are firm believers in linebreeding our cow herd. Line breeding allows us to strengthen our pedigrees and increase calf consistency with every passing year.

The value of knowing what to expect is something we rely on in our program.

Consistency & Efficiency = Profitability

At Calvo Family Red Angus, we breed cattle based on how they perform in a real world environment; and under the same conditions our customers are going to be operating under. We understand the challenges producers face day to day – so we operate our purebred cows the same way our customers are going to operate their commercial cows. It is because of the challenges so many producers face today is why we stress our breeding program and to breed for consistency. We linebreed our cattle, rather than chase fads or hype. Today’s stakes are too high to go after something that is unproven and to simply hope for the best.

5L RIPPED IN BLACK Z169 510B – SIRE OF LOTS 2-18

Ripped in Black 510B is a bull that has been used in our program for a few years now. He is a special bull that you just don't come across every day. He is a son of Redhill 28U Ripper 132Y and out of a OCC Prototype daughter. A true beef bull that is arguably siring more hip and muscle than any bull we have used; and it all comes in a light birth weight package. We used 2 red sons of 510B last spring on a group of 2nd calf heifers and we had his first daughters calve last year. We noticed that they have a lot of look and style with absolutely perfect udders. If you're looking to add muscle and shape then be sure to check out his sons.

Lot 35

**OCC RED GRAZER 610Z**

Sire of Lots 36-46

Out of 84 bulls of all breeds Grazer's sire, BB Grazer 6242, was the highest gaining, forage tested, purebred bull at the 1992 Noble Foundation forage test. OCC Grazer 610Z has also proven himself to be a leading sire in the red angus breed for grass-based cattle. He will reduce your cow cost without sacrificing pounds per acreage. We feel his claim to fame is going to be the females he leaves behind. We have a lot of daughters in production out of Grazer, and they are as efficient as they come. They are moderate framed females with a lot of rib shape and natural fleshing ability. They are feminine made with absolutely perfect udders. If you're looking for the type of bulls that are going to perform on grass and sire efficient females that wean off a big calf every year, these 610Z sons are the ones you need to look at.

A moderate framed age-advantaged bull that is going to be able to cover a lot of cows.

Lot 153

This year's black red-gene carrier bulls are some of the most impressive that we have had the opportunity to offer. We use a lot of Angus genetics in our program to create the type of cattle that work for us. We also have a lot of back red gene carrier females in the herd today. So, dealing with a few more black bulls every year is just part of it. If color is not a concern - take a serious look at these black red-gene carrier bulls... they are flat out good.
