

Annual Production Sale

MONDAY - 1:00 PM MST

FEBRUARY 22, 2021

DILLON LIVESTOCK AUCTION
DILLON, MONTANA

Offering

119 PAP TESTED YEARLING & LONG YEARLING BULLS

10 REGISTERED REPLACEMENT HEIFERS

74 COMMERCIAL REPLACEMENT HEIFERS

W E L C O M E

Our 14th Annual Production Sale will be held in Dillon, Montana on Monday, February 22nd. Like most of you, we welcomed 2021 as the past year has been a trying one and the cattle market has certainly felt the effects. Surely better times are on the horizon as high quality Angus cattle remain in demand.

This year's offering includes 119 bulls that have been Fertility, PAP and BVD tested and we believe this is the most powerful set of bulls ever offered. We continue to strive to produce high quality, fault free cattle that will enhance your program. Also included are 10 registered replacement heifers right out of the heart of our program and 74 fancy home-raised commercial replacement heifers.

The cattle were raised in the Wise River high country and are now on feed at Hansen Feedlot (just past MM 6 on Hwy 91 North, Dillon, MT) and are available for previewing until Saturday, February 20 and at Dillon Livestock Auction thereafter. We are pleased with their condition, growth and excellent dispositions. Videos of the offering will also be available at our website.

We hope to see you sale day but if you are unable to attend we are offering 2 options for bidding online via either Northern Livestock Auction or Cattle USA. Please see page 2 in this catalog for instructions. We appreciate the opportunity to be your seed stock source and invite you to come evaluate the cattle and enjoy a beef lunch beginning at 11:30 on Monday, February 22nd. Please contact us if we can be of assistance.

DILLON LIVESTOCK – DILLON, MT

Annual Production Sale

MONDAY, FEBRUARY 22, 2021

DILLON LIVESTOCK AUCTION
DILLON, MONTANA
Lunch 11:30 AM MST | Sale 1:00 PM MST

SALE DAY CONTACTS

Dillon Livestock Auction.....406-683-2002
Cory Lamey Cell.....406-491-7363
Kari Lamey Cell.....406-491-1800

SALE LOCATION

Dillon Livestock Auction is south of Dillon and east of Interstate 15. Take Exit 56 and head north or Exit 59 and head south.

AUCTIONEER

Joe Goggins.....406-861-5664

REPRESENTATIVES

Kurt Kangas, American Angus Association.....406-366-4190
John Goggins, Western Ag Reporter.....406-698-4159
Jeff Thomas, AgriMedia.....406-581-8859
Devin Murnin, Western Livestock Journal.....406-696-1502

INSPECTION Cattle may be inspected at Hansen Feedlot, Hwy 91 N (just past mile marker 6 on west side of Hwy) any time prior to the sale. They will be available for viewing at the sale site beginning Saturday, February 20, 2021.

WINTERING Free feed until April 1, 2021 and then \$3 per head per day thereafter.

DELIVERY Free delivery on bulls up to 750 miles and at cost thereafter. If you choose to haul your own bulls sale day, we will deduct \$100 per head. Buyer is responsible for heifer trucking.

BIDS/SIGHT UNSEEN GUARANTEE

If you are unable to attend the sale, please call us, the Publication Representatives, or the Auctioneer, and we will assist you with your order and offer a sight unseen satisfaction guarantee.

SALE ORDER Commercial heifers sell first, followed by fall bulls in catalog order, then yearling bulls in catalog order, and registered heifers sell last.

ACCOMMODATIONS

Fairbridge Inn Express.....406-683-3636, ask for Circle L rate.

ANNOUNCEMENTS

Check CircleLAngus.com for a supplement sheet with up-to-date information. All announcements made from the auction block take precedence over printed material in this sale book.

FIRST BREEDING SEASON GUARANTEE

All bulls selling for \$3,250 or more will be covered 50% by Circle L Angus if they are injured during their first breeding season. This guarantee does not include death as that can be insured for. Breeding season is defined as a 60-day period following the first turnout of bulls. Fifty percent of the value of the injured bull, minus one-half the salvage value, will be given credit in a future Circle L Angus sale or towards a replacement bull if one is available. Salvage value, if any, will be split equally between Circle L Angus and the buyer. All injured bulls must be diagnosed by a veterinarian. We also reserve the right to a second opinion by a veterinarian of our choice. Please notify us as soon as possible should injury occur and prior to the injured bull being sold for salvage. All claims must be made by September 1, 2021.

FERTILITY Joe Hartley, DVM performed a breeding soundness exam, semen test, scrotal measurement and BVD test on all bulls.

HERD HEALTH All bulls are guaranteed virgin bulls and were vaccinated with Pyramid 5 Presponse, 7-way with Somubac, wart vaccine, Fusoguard plus booster, and Pour On. All dams of registered cattle selling have tested negative for Johnes disease.

PAP TEST All bulls in the offering have been PAP Tested by Tim Holt, DVM and Pap Testing expert. Circle L Angus spring bulls were born at 5860 feet and summer ranged from 6000-8500 feet from June to October. The fall bulls ranged at 6000 feet from April through October. All the bulls were PAP Tested in Wise River and the PAP scores are in this catalog. For more information or recommended scores specific to your operation, contact us or Dr. Tim Holt, DVM at 970-596-1470 or timholt@colostate.edu.

RETAINED INTEREST Circle L Angus is retaining one-third revenue sharing semen interest in any bull sold in this sale. Full possession and full salvage value sells on all bulls.

TERMS AND CONDITIONS This sale is being conducted under the suggested sale terms and conditions adopted by the American Angus Association.

GENOMIC ENHANCED EPDS
Sale bulls that have genomic enhanced EPDs through the GeneSeek test are noted by this logo.

EPDS AS OF JANUARY 22, 2021

ABSENTEE BIDDING OPTIONS

Setting up your absentee bidding option a few days before the sale is recommended.

1.

WATCH AND BID ON NORTHERN VIDEO

**Preview Cattle Videos at
northernlivestockvideo.com**

Signing up to bid on your desktop:

1. It is best to use the Google Chrome web browser.
2. Pre-Register at least one day prior to the sale.
3. Go to bid.northernlivestockvideo.com and click "Get Approved to Bid".
4. Doing this will prompt you to create an account, after which you will fill out a bidder approval application.
5. Once Approved, an email will be sent to the email account provided, please click the link in that email to activate your account and a buyer number will be provided.
6. On sale day (after approval), visit www.northernlivestockvideo.com to view and bid!

Signing up on your phone:

Use your mobile device to download the Northern App and follow the above steps to get approved. There is an instructional video on how to register to bid on our website, if you have any questions.

For technical assistance with Internet Viewing and Bidding Questions, call Sam Fraser 406-860-0590.

2.

WATCH AND BID ON CATTLE USA

Visit cattleusa.com and pre-register for bidding. Click on Dillon Livestock Auction and login to your account or set up a new account if you have not bid before. Once logged in, click the Submit button next to Beaverhead Livestock Auction to obtain pre-approval. Please pre-register 24 hours in advance of the sale. If you have questions, call Dillon Livestock Auction at 406-683-2002.

When it comes to agriculture, "best laid plans" are just that.

At Northwest Farm Credit Services, we know things don't always go the way you expect. We've been through it—100 years strong—providing financing and crop insurance to farmers and ranchers through good times and bad. Because we believe in what we do—and who we do it for.

If partnering with a stable lender sounds good to you, give us a call. We'd be happy to help.

Here to Help You Grow®

Driving the science of better breeding

There's little room for error in the cattle business. Producers need the most advanced information to make smart selection decisions, and Angus Genetics Inc. (AGI) provides it through genomic-enhanced expected progeny differences (GE-EPDs).

GE-EPDs have become the industry standard for herd improvement, building on decades of science-backed genetic evaluation tools originated and maintained through the American Angus Association®, home to the largest and ever-growing single-breed beef cattle database.

EPDs that traditionally contained all pedigree, performance and progeny information now also include results from available genomic, or DNA, tests. Breeders who use genomic technology give buyers access to AGI-generated GE-EPDs that provide:

Increased predictability and decreased risk for young and unproven animals due to enhanced accuracy of EPDs

Better characterization of genetics for difficult-to-measure performance traits (such as carcass traits, maternal traits and feed efficiency)

The ability to make more rapid progress for traits that are important to you, due to:

- more accurate selection
- easier identification of genetic outliers
- the ability to propagate young animals with confidence earlier in their lives

In fact, GE-EPDs on unproven animals have the same amount of accuracy as if they had recorded 10-36 calves, depending on the trait. That's valuable insight, offered regularly through the breed's weekly national cattle evaluation.

Trait	Progeny Equivalent	Trait	Progeny Equivalent
Calving Ease Direct	26	Heifer Pregnancy	17
Birth Weight	23	Calving Ease Maternal	20
Weaning Weight	27	Milk	36
Yearling Weight	23	Mature Weight	15
Dry Matter Intake	12	Mature Height	9
Scrotal Circumference	15	Carcass Weight	15
Docility	12	Yearling Height	17
Claw Set	10	Carcass Marbling	11
Foot Angle	10	Carcass Ribeye	17
		Carcass Fat	14

How do you know if EPDs are genomic-enhanced?

Ask your breeder, refer to the registration paper, or look for the AGI GE-EPD logo, Angus GS™ powered by partner Neogen GeneSeek or the HD50k by partner Zoetis. These images indicate animals for which low-density or high-density genomic testing has been conducted and incorporated by AGI into GE-EPDs

www.angus.org

Research Report: Selecting Against High Altitude Disease

On May 29, 2020, the American Angus Association® and Angus Genetics Inc. (AGI) officially released expected progeny differences (EPDs) for high altitude pulmonary arterial pressure (PAP). The EPD predicts the genetic differences in PAP score with lower EPDs being more favorable. PAP is an indicator for animals with lower risk of developing high altitude disease (HAD), which in most cases results in congestive right heart failure. Researchers and veterinarians at Colorado State University (CSU) have been studying the disease and its onset for decades and have developed PAP tests in order to select animals to avoid pulmonary hypertension. This disease, most commonly found in cattle living at elevations of 5,000 ft. or greater, is a result of cattle living in hypoxic environments challenging heart and lung function. Symptoms of the disease include lethargy, diarrhea, weakness, brisket edema, right heart failure and eventual death.

While hard to quantify the economic deficit to the industry, it is known to be detrimental to high-altitude herds as onset can occur at any age, can be further exasperated by other events such as bovine respiratory disease (BRD), and in almost all cases is fatal to the animal. The PAP procedure is helping operations to remove high-risk high-risk HAD individuals earlier in life, not only to be removed from the herd, but also to select breeding animals for the next generation. In order to take high-altitude PAP measurements on individual groups, animals need to be living at elevations at 5,500 feet or higher for at least a 4-6 week period before scores are taken. This warm-up period allows for the cattle to adjust to the environmental settings, allowing accurate scoring.

Research in the area reports PAP score is a moderately heritable measurement. A collaboration with the Association, CSU and AGI laid the fundamental groundwork for a PAP genetic evaluation. A recent study investigated the relationships of scores taken at differing elevations. The study by Pauling et al. (2018) concluded a high positive correlation ($r=0.83$) between PAP measurements taken at high altitudes (5,250 ft. or greater) and moderate altitudes (4,000-5,250 ft.). This reveals PAP scores taken at moderate altitudes can be an informative indicator trait of measurements taken at higher altitudes.

For the Association's PAP genetic evaluation, measurements taken at 5,500 ft. or greater are considered high-altitude measurements; whereas, measurements taken from 4,000 to 5,500 ft. are considered moderate altitude. Heritability estimates were similar to those found in previous research with high altitude ($h^2=0.39$) having a larger heritability when compared to moderate altitude PAP scores ($h^2=0.20$). In addition, the correlation estimate between the two elevation groups remained relatively unchanged at 0.75. In addition, high-altitude weaning PAP scores are included in the Association's genetic evaluation to account for any pre-selection that may occur at weaning time. High-altitude weaning PAP scores are those taken between 120-319 days of age at 5,500 ft or greater. The heritability of high-elevation weaning PAP ($h^2=0.25$) is similar to that of moderate-elevation yearling PAP.

PAP EPDs are predicted using the Association's Single Step genomic evaluation; therefore, genotypes are used for the PAP evaluation to more precisely define relationships among pedigrees. This means

Selection Tools for Pulmonary Arterial Pressure

any animal with their own record, progeny records or genotype included in the weekly genetic evaluation receives a PAP EPD.

It is important to remember, a lower PAP EPD predicts a sire should produce progeny with lower pulmonary arterial pressures, decreasing the risk of contracting HAD, which is desirable. It is also important to remember that a PAP EPD is not a replacement for taking scores on cattle living at elevation. An animal may have good genetics to pass onto the next generation, but due to a life event, BRD for instance, their respiratory system may be damaged, causing them to lack the viability to survive at high altitudes. Think of PAP in terms of scrotal size. Bulls may have the genetic potential to pass along larger scrotal size genetics, but scrotal (SC) EPDs are not a replacement for breeding soundness exams (BSE). Producers will not send a bull out without conducting a BSE, no matter how good his SC EPD is. The EPD can be valuable to select parents for the next generation with less risk. However, if a sire is to be taken to higher elevations to live, they should be tested themselves before doing so.

PAP EPD remains a tool to increase the environmental adaptability of cattle living at altitude. While research exists and is ongoing to understand the possible link between bovine congestive heart failure (BCHF) experienced at high altitude versus lower altitude, no definitive evidence of a direct link exist at this time. PAP EPD is not considered a solution to avoiding BCHF in the feedlot. For more information or questions on PAP EPD, please contact the Performance Programs Department at (816) 383-5100.

AMERICAN ANGUS ASSOCIATION SELECTION TOOLS

Expected Progeny Difference (EPD), is the prediction of how future progeny of each animal are expected to perform relative to the progeny of other animals listed in the database. EPDs are expressed in units of measure for the trait, plus or minus. **Accuracy (ACC)**, is the reliability that can be placed on the EPD. An accuracy of close to 1.0 indicates higher reliability. Accuracy is impacted whether the animal has a genotype and the number of progeny and ancestral records included in the analysis.

Calving Ease Direct (CED), is expressed as a difference in percentage of unassisted births, with a higher value indicating greater calving ease in first-calf heifers. It predicts the average difference in ease with which a sire's calves will be born when he is bred to first-calf heifers.

Birth Weight (BW), expressed in pounds, is a predictor of a sire's ability to transmit birth weight to his progeny compared to that of other sires.

Weaning Weight (WW), expressed in pounds, is a predictor of a sire's ability to transmit weaning growth to his progeny compared to that of other sires.

Residual Average Daily Gain (RADG), feed efficiency expressed in pounds per day, is a predictor of a sire's genetic ability for postweaning gain in future progeny compared to that of other sires, given a constant amount of feed consumed.

Yearling Weight (YW), expressed in pounds, is a predictor of a sire's ability to transmit yearling growth to his progeny compared to that of other sires.

Yearling Height (YH), is a predictor of a sire's ability to transmit yearling height, expressed in inches, compared to the that of other sires.

Scrotal Circumference (SC), expressed in centimeters, is a predictor of the difference in transmitting ability for scrotal size compared to that of other sires.

MATERNAL

Heifer Pregnancy (HP), is a selection tool to increase the probability or chance of a sire's daughters becoming pregnant as first-calf heifers during a normal breeding season. A higher EPD is more favorable.

Calving Ease Maternal (CEM), is expressed as a difference in percentage of unassisted births, with a higher value indicating greater calving ease in first-calf daughters. It predicts the average ease with which a sire's daughters will calve as first-calf heifers when compared to daughters of other sires.

Maternal Milk (Milk), is a predictor of a sire's genetic merit for milk and mothering ability in his daughters compared to daughters of other sires. In other words, it is that part of a calf's weaning weight attributed to milk and mothering ability.

Mature Weight (MW), expressed in pounds, is a predictor of the difference in mature weight of daughters of a sire compared to the daughters of other sires.

Mature Height (MH), expressed in inches, is a predictor of the difference in mature height of a sire's daughters compared to daughters of other sires.

MANAGEMENT

Dockity (DOC), is expressed as a difference in yearling cattle temperament, with a higher value indicating more favorable dockity in a sire's offspring compared to another sire.

Claw Set (Claw), is expressed in units of claw-set score, a lower EPD is more favorable, indicating a sire will produce progeny with more symmetrical, even and appropriately spaced toes.

Foot Angle (Angle), is expressed in units of foot-angle score, a lower EPD is more favorable, indicating a sire will produce progeny with an angle closer to 45 degrees at the pastern and appropriate toe length and heel depth.

Pulmonary arterial pressure EPD (PAP), is expressed in millimeters of Mercury (mmHg), with a lower EPD being more favorable indicating a sire should produce progeny with a lower PAP score to decrease the risk of progeny contracting high altitude disease most commonly experienced at 5,500 ft or greater in elevation.

CARCASS

Carcass Weight (CW), expressed in pounds, is a predictor of the differences in hot carcass weight of a sire's progeny compared to progeny of other sires.

Marbling (Marb), is expressed as a fraction of the difference in USDA marbling score of a sire's progeny compared to progeny of other sires.

Ribeye Area (RE), expressed in square inches, is a predictor of the difference in ribeye area of a sire's progeny compared to progeny of other sires.

Fat Thickness (Fat), expressed in inches, is a predictor of the differences in external fat thickness at the 12th rib (as measured between the 12th and 13th ribs) of a sire's progeny compared to progeny of other sires.

\$VALUE INDEXES

\$Value Indexes, reported in dollars per head, are multi-trait economic selection indexes where a higher values suggest more profit when comparing two individuals.

Maternal Weaned Calf Value (\$M), expressed in dollars per head, predicts profitability differences in progeny from conception to weaning by decreasing mature cow size and improving dockity, foot structure and fertility while maintaining weaning weights consistent with current production.

Weaned Calf Value (\$W), expressed in dollars per head, provides the expected difference in future progeny preweaning performance from birth to weaning.

Cow Energy Value (\$EN), is expressed in dollar savings per cow each year due to lower cow maintenance energy requirements (due to lactation and body size) with a larger number being more favorable.

Feedlot Value (\$F), expressed in dollars per head, is the expected average difference in future progeny performance for postweaning feedlot merit (growth and feed efficiency) compared to progeny of other sires assuming producers retain ownership of cattle and sell on a carcass weight basis.

Grid Value (\$G), expressed in dollars per carcass, is the expected average difference in future progeny performance for carcass grid merit, including quality and yield grade attributes, compared to progeny of other sires.

Beef Value (\$B), expressed in dollars per carcass, represents the expected average differences in the progeny postweaning performance and carcass value compared to progeny of other sires. This index assumes commercial producers wean all male and female progeny, retain ownership of these animals through the feedlot and sell on a carcass merit grid.

Combined Value (\$C), an index, expressed in dollars per head, includes all traits that make up both \$M and \$B with the objective that commercial producers will replace 20% of their breeding females per year with replacement heifers retained within their own herd. The remaining cull heifer and steer progeny are then assumed to be sent to the feedlot where the producers retain ownership of those cattle and sell them on a quality-based carcass merit grid.

CIRCLE L

LANDMARK

AAA 19148655

Landmark was added to the BEEF-360 lineup due to his exceptional phenotype; being an extremely deep bodied, stout made, attractive bull standing on an impeccable foot.

With his outcross pedigree, great balance of calving ease and performance, and quiet nature, Landmark is a great choice. After topping the 2019 Circle L Bull Sale, Landmark has proven to sire the kind of progeny demanded by the most discriminating seedstock breeders and ranchers alike.

1AN01546 CIRCLE L GUSTO

Reg#: 19437104 | Circle L Gus x Connealy Final Product

- › Gusto combines calving ease and growth with breed-leading HPG and \$M, moderate milk and common-sense \$EN. His daughters will be the keeping kind, while his sons will make you money across the scale and in the feedlot.
- › Here's an elite herd bull prospect descending from a high-producing dam. Gusto's individual performance ratios are 85 for birth, 110 at weaning and 109 for yearling.
- › A son of the high-altitude standout Gus, Gusto is a great choice for those at elevation, boasting a PAP score of 36 and a top tier PAP EPD.

- This multi-trait sire produces moderate-framed, thick-made calves with muscle expression, plus exceptional feet and legs.
- Daughters are easy-fleshing females with beautiful udders that will make outstanding cows.
- Very docile bull as exhibited in his progeny.
- One of the top PAP bulls being used today, Gus excels in high altitude environments.
