Diamond D Angus

Welcome

Stuck in the Mud

I never thought I would say it, but getting stuck in the mud is cause for celebration. Drought (or drouth as old-timers say out West) set in for the last seven years here at the ranch. One year we received just three and a half inches of precipitation. I am grateful for the moisture and hopefully the drought has finally broken. Around the ranch, several vehicles had to be towed out due to the wet conditions this fall. While it is tempting to be frustrated, it is wiser to embrace gratitude and joy for the long walk back to the shop.

Our focus on moderate-framed cattle, grazing management, and soil health served us well during this difficult time with extreme drought. I believe forage development tells a person a great deal about an animal. Cattle developed under practical ranch conditions, especially drought, are more likely to remain functional and pass that function on to their offspring.

Return of the Feet Guarantee

The cattle look very good this year. The bulls we are offering were developed entirely on forage, just like all the cattle on this ranch have been for many years. The longer I do this, the more convinced I become of the advantages it provides for both us and for you, our customers. Last year was the first year we offered a guarantee on feet. We never received a single call about feet problems, only positive feedback, so we offer the same guarantee again this year.

I never claim anything is one hundred percent, and I rarely use the word "never." I strongly believe that when cattle are culled generation after generation for soundness, longevity, fertility, and function, a herd can be developed with very few problems. These cattle last longer, stay productive, and continue doing their job under real-world conditions.

Diamond D Angus is not breeding cattle to chase a number. We have always focused on cattle that prove themselves. If an animal causes problems, we cull it. It does not matter how good it looks on paper. We have not had to cull cattle for feet problems for years.

Proven Performance

If your goal is to build a productive cow herd, I believe you should start with maternal, moderate-framed genetics. That has been our focus at Diamond D for generations. The industry is often short of good maternal traits and we work to meet this demand with functional replacement females who can stay in production for many years. Moderate-framed cattle also help control input costs by performing in tough conditions like bitter cold winters and prolonged extreme drought, which improves the profitability of your operation.

Thank you for your interest and confidence in our program. If you have any questions about the cattle, please call anytime before bidding day. We would be glad to visit with you about the offering and help you find the genetics best suited for your program.

Payment Options
Method One: Full Price
Pay full purchase price. This will allows your bull or bulls to be delivered fall of 2026 or spring of 2027. Wintering charges will apply if you decide to have Diamond D Angus winter your bulls. If you want to have your bull or bulls delivered fall of 2026 you will have the option of buying insurance or not. If you would like Diamond D Angus to winter your bull or bulls insurance will be required.

Method Two: 50% Down
You will be required to pay a nonrefundable 50% of purchase price on your bull or bulls. The balance owed, including wintering charges will be required at time of delivery. Insurance will be required. Delivery charges will be the same as fall delivery.

2/3 Interest & Full Possession
Diamond D Angus is retaining one-third revenue sharing semen interest on every bull selling in this sale. Full possession and full salvage value sells on all bulls. Diamond D Angus will contact the new owner if they would like to collect semen and it will be done at the new owner's convenience, and Diamond D Angus' expense.

Herd Health
Bulls sell 100% guaranteed to be fertile.
We do not guarantee against injury. However, we will pay partial insurance if desired on bulls $8,000 or over.

Register to Bid
Pre Registration is required for the online sale!

Volume Discount
Diamond D Angus offers a $200 discount off third bull purchases, and $200 off for each additional bull purchased by a single buyer.

Hauling Discount
$1,000.00 Discount if you haul within one week of the sale.

Wintering Arrangements
Your bulls may be wintered at Diamond D Angus until the end of April at the cost of $8.00 per head/per day, until payable upon delivery or pickup.

Delivery
FREE DELIVERY on bulls to central points within 500-mile radius from Diamond D Angus. Beyond 500-mile radius, to central points at cost of $.40 per mile per bull anywhere in the continental USA.

Canadian Delivery
Cattle will be delivered via Sweet Grass. Diamond D Angus will pay half the cost of health papers on animals sold into Canada.

Online Sale
The sale is ONLINE this year. You are welcome to come see the cattle. Great Falls is served by Delta, Horizon and North West Airlines. Great Falls is about an hour and a half from Diamond D Angus.

Lot Numbers
Ear Tags and freeze brands will correspond with numbers in catalog.

The Diamond D Advantage

- More Fertile and will cover more cows
- Will continue to gain weight through first breeding season
- No bulls' feet or legs ruined due to hot feed
- More years of service from forage bulls
- Less injuries and breeding problems
- Bulls are more conditioned to the environment
- Bulls have been put through a rigid test

If you want to produce cows that will last a long time, it is important to use bulls from a herd that has cows that have a proven record of calving every year on time for 10 or more calves. We cull our herd for udder quality and temperament and refuse to trim feet. If an animal needs feet trimmed, we eliminate it.

Most pure-bred producers will make excuses for the problems you see on their cattle. The reality is almost everything you see is a result of genetics. When you listen to a producer talk mostly about performance and EPD numbers, chances are they have left most functional traits behind and the genetics will not last for very many years.

2026 WARRANTY OF FEET ON ALL BULLS SELLING

We feel very confident about the quality of feet we offer. The only way to clean up feet issues is to sell all cattle that have any issues. We have done this for years. Mainstream Angus has been a train wreck when it comes to functional traits like feet. The chasers of EPD numbers have made great numbers and destroyed things like feet.
We guarantee that the bull you buy will not develop any genetic problems with their feet until the bull is 5 years old. If the problem with feet is from injury or sickness of any kind this warranty will not cover the bull. Please call if you have any problems.

How This Sale Close Works

The Diamond D Angus online auction will close with horse race style bidding or extended bidding. This means that when the online auction event comes to its scheduled end time there will be 5 more minutes of extended bidding. If bidding continues the sale will stay open until there is a 5-minute stretch with no bidding on any lot. Once there is a full 5 minutes with no bidding on any lot, the whole event will close.

THIS AUCTION IS SCHEDULED TO CLOSE AT 5:00pm ON DECEMBER 8th.
Example 1: The auction closes at 5pm and goes into extended bidding. if there are no bids on any lots between 5pm and 5:05pm, the whole sale is declared clsoed at 5:05pm.

Example 2: The auction is scheduled to close at 5pm and goes into extended bidding. There is a bid on a lot at 5:02pm. Every lot remains open to bids. If there are no bids on any lot by 5:07pm, the whole sale is declared closed at 5:07pm.

Example 3: The auction is scheduled to close at 5pm and goes into extended bidding. There is a bid on a lot at 5:02pm. Every lot remains open to bids. Another bid is placed at 5:06pm. Every lot remains open. Another bid is placed at 5:10pm. Every lot remains open. If there are no bids on any lot by 5:15pm, the whole auction is declared clsoed at 5:15pm.

Creating an Account with Pelton Livestock Online Auctions

To register, select the Login/Register link on the right top side of the screen in the navigation bar. Register for a new account by entering your contact information, email address, desired password, etc. Once you submit the auction registration form, an email will be sent to the email account provided. Please click the link in that email to activate your account. Please keep your user information (email address and password) in a secure place as you can use the same account login for all online auctions hosted by Pelton Livestock. If you have any questions or need assistance with creating an account or bidding, please call PELTON LIVESTOCK Darci Sachdeva at 406-794-3174.
Only registered bidders over the age of 18 can participate in Pelton Livestock Online Auctions.

Auction Demo Available

Is The Auction Platform Mobile Friendly?

Yes, the auction platform and entire site is mobile friendly. So, no matter the device (computer, cell phone, tablet, etc.) you are utilizing to view and/or bid on an auction, the site is responsive to your screen, so you have the most optimum viewing and bidding experience.

Buyer FAQ

Please read the Buyer FAQ on the upper right hand side of the screen in the navigation/menu bar to learn how to bid, use watch lists, maximum bids and more.

Performance Information

Line Breeding

In the notes of all the bulls selling, we talked about pedigrees in hopes of helping our customers understand our breeding program. We strongly believe that our customers greatly benefit from buying linebred bulls. The benefits include:

1. If you like what you see in a bull or cow family, by line breeding it intensifies these traits. A line-bred bull will breed more true to himself than a non-line bred bull.

2. Line breeding intensifies all traits, good and bad. If genetically there were a problem, it would show up in our herd. We would identify the problem and eliminate the use of these traits.

3. The cows and bulls that we have talked about in the notes have already gone through many generations of line breeding and put through a very rigid test. To pass the test they need to be of moderate frame, easy fleshing, adequate performance, structurally correct, and good udder quality. The bulls must be very masculine.

Performance Key

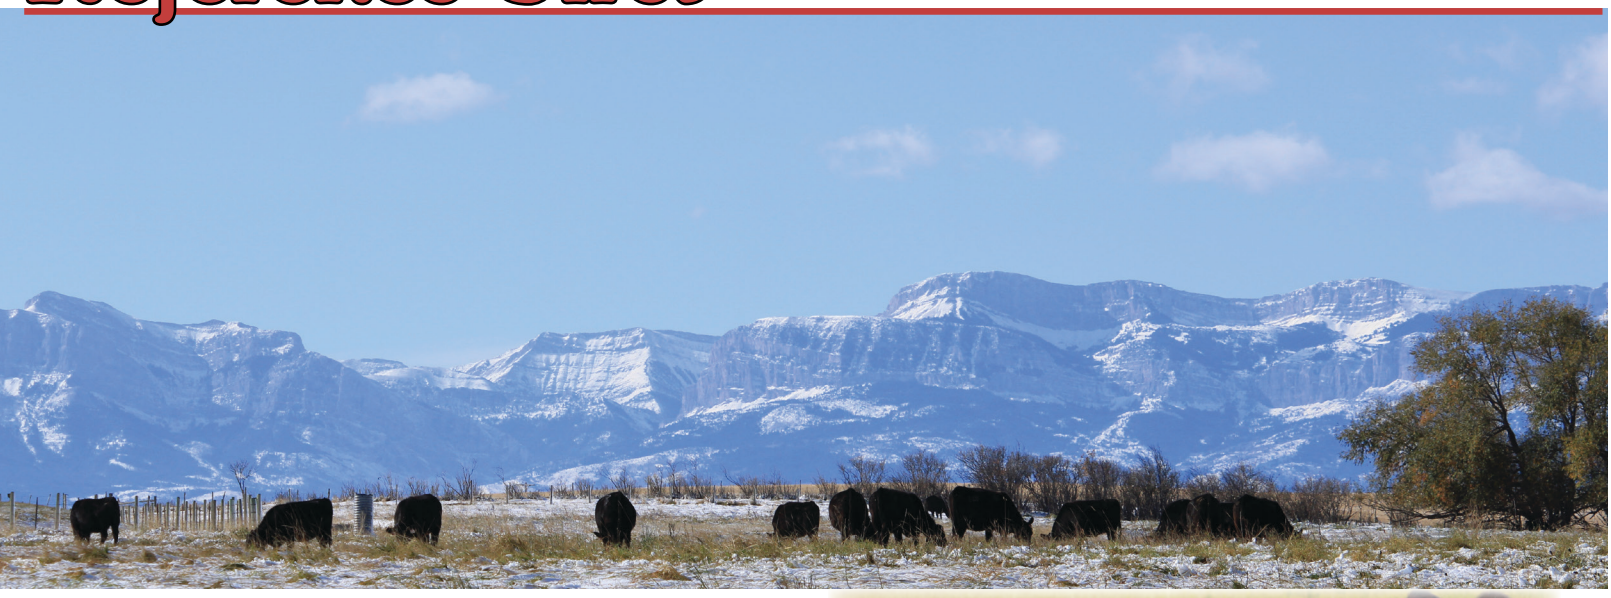

BW - Birth Weight
WW - Weaning Weight
Cow/Calf Ratio - Adjusted Wean Efficiency Percentage of cow's weight that the calf weaned.
Weight, Scrotal, & Hip Ht data was all pulled 10/28/2026.

Calving Ease Prediction

1 Cow only
2 Fair calving ease
3 Good calving ease
4 Outstanding calving ease

This is only a prediction by Diamond D Angus. This is not a guarantee. The sire provides only 1/2 of the genetics in determining birth weight.

DDA Galatea 859

This OCC Great Plains son is owned by North Fork Angus, Chinook, MT, and has served in our breeding pastures for three consecutive seasons. Now seven years old, he remains sound, active, and highly fertile. His dam, the influential DDA Galatea 859, is currently a flush cow for Lyoning Angus and Wyatt DeVries. A top-selling bull in their spring sale traces directly to her. We expect 135U daughters to be among the best cows we've ever raised—deep-bodied, quiet-tempered, and maternally driven. His pedigree is stacked with cow-making power: DDA Trouble Free 60Y, a double-bred OCC Great Plains son and triple-bred to the legendary Dixie Erica of CH 1019 DDA Melisa E808, dam of DDA Great Plains 77U and full sister to DDA Lodge E5H, both out of the prolific DDA Melisa 824 Zelda 119 DDA, double-bred to our cornerstone 580/368 cow family. This lineage reflects our commitment to longevity, maternal strength, and functional genetics.

D D A Melisa 545

It's hard to say enough good about this Great Plains son. He's as close to perfect phenotype as a bull can be—phenomenal feet, athletic movement, and structural integrity that stands out in any pasture. His dam is a full sister to DDA Lodge E5H and a beautiful cow who weaned 10 calves here at Diamond D Angus. While much has been said about DDA Melisa 824, it's worth spotlighting her dam, DDA Melisa 545—a cornerstone cow purchased years ago by Howrey Angus. Monte flushed her extensively, retained many daughters, and sold numerous sons, including MH Mick 53, whom we acquired. DDA Great Plains 77U was actively used this year in a multi-sire breeding group, and we expect his sons to carry forward the same balance, athleticism, and maternal strength. Don't overlook them—they're built to last.

Diamond MC Henry 0113
Miss Diamond Change 065

Longevity in our herd isn't just a number—it's proof of function, soundness, and maternal integrity. Our standard is simple: if a cow gives problems, she's gone. That includes lost calves, runts, poor feet or structure, udder issues, bad temperament, or failure to breed back promptly. So when a cow is old and still here, she's passed a rigid test—year after year. We've identified cow families that consistently pass this test across generations. DDA Hana 940 is one of them. She stayed in production until age 19, and her dam, Diamond Henretta 368, until age 22. We've retained sons from this line—DDA Bar Lad 177U and DDA Alliance 142V—born when Hana was 18 and 19 years old, respectively. In our view, cattle selected to be "the most" in any one trait often sacrifice something essential to get there. True balance comes from selecting for function, not extremes. That's how longevity is earned—and why it matters.

D D A Ginny 401

Sire of 45W

In 2014, I traveled to New Zealand to visit the Pinebank and Resurgam Angus herds—both 100% forage-developed for generations. While photographing cattle and environment, I captured an image of my favorite cow in the Pinebank herd. She was 17 years old at the time and had reached their elite "grannie" status. Bill Hodge of Sustainable Genetics later reminded me that she was the dam of Pinebank SE 9D and 10D—embryos he had imported and raised DDA Carrolton 45W is a son of Pinebank SE 10D and the 16th calf raised by our own DDA Ginny 458. His maternal line runs deep: DDA Ginny 604, his granddam, weaned 11 calves and traces to the same cow family as DDA Bar Lad 177U and DDA Alliance 142V. This family has proven itself through production, not excuses—every cow stayed because she earned it. Buy with confidence: DDA Carrolton 45W sons are built to sire daughters that stay in production for years to come, with soundness, fertility, and forage adaptability bred in.

D D A Banjo 1101
Dda Galatea 031
Lodge of Wye
D D A Melisa 824

Dda B&T 18K

Ole Fahrens 361J was the bull we selected from Ole Farms' 2023 sale. His pedigree is built around cow families we know well. DDA B@T 18K made outstanding daughters and was a maternal sister to DDA Galatea 859. No surprise there — their dam, DDA Melisa E703, stayed in production until age 15 and is also the dam of our DDA Freman 80R sire.

The sire of Ole Fahrens 361J is a son of DDA Pinebank 50H. The Olson family once told me that their very best cows are 50H daughters, which speaks volumes about the maternal strength behind this bull.

DDA Emblazon 27C

Ole Kenetrek 268K was purchased in the 2024 Ole Farms sale, and his first calves are selling this year. I am very excited about what I'm seeing so far. His pedigree traces many times to our famous DDA Melisa 824 cow family — both she and her son were featured in the Angus Hall of Fame books some years ago.

He also comes from a dam that is line bred back to Lodge of Wye. Lodge of Wye is one of only twelve bulls ever recognized by the American Angus Association as being proven defect free, and that influence continues to show up in cattle that last and produce.

DDA Ledger 76E
DDA Maddie 438

Pinebank Waigroup 41/97

Purchased from Ole Farms in Alberta, Canada, in their 2022 sale as a coming two-year-old, 775H brings together some of the most proven maternal genetics in our program. His grandsire, DDA Pinebank 50H, may be the best bull Ole Farms has ever acquired—tracing back to the prolific Melisa 206, who weaned nine calves here. That same productivity runs deep: DDA Melisa 003, another cornerstone cow, also weaned nine calves and ties directly to the cow family behind our influential DDA Fahren 21X. The dam of 775H is JAD Phylix 6157, a female with wide-reaching influence: She is the maternal granddam of Oak Lane Prism 410. She is also the dam of DDA Shoshone 130, sire of many standout females in our herd—including DDA Melisa 824. This bull represents the kind of maternal consistency, longevity, and structural soundness we strive to multiply. His daughters are expected to carry forward the same quiet disposition, fertility, and cow-making power that define this lineage.

A powerful maternal pedigree backed by generations of longevity. The DDA Alliance 142V sire is one we can't say enough good about — correct, consistent, and out of a cow that stayed in production until 19 years of age. She is also the dam of our 177U sire. Her mother, Diamond Henretta 368, remained productive until she was 22. Alliance 142V himself traces to another highly influential cow, DDA Stella 443, who helped build the Hauge Angus Ranch program in Nebraska. His sire, Pinebank Waigroup 41/97 of New Zealand, was known for correctness and real world function. The dam of 1C is sired by Pinebank SE 10D, one of two bulls purchased years ago from Bill Hodge. His mother was a Pinebank cow both Bill and I independently considered one of the best cows the program ever produced. At the time, Pinebank 92/99 was still working at 16 years old — a testament to the maternal strength behind this pedigree.

Ole Farms in Alberta has purchased many straws of our DDA Emblazon 27C, and this bull is strongly represented in the pedigree of this young herd sire. They bred DDA Ginny 107, a cow they acquired from us, who is a Hyland BC 0668 daughter out of a DDA Lodge E5H dam — making her double bred to Lodge of Wye. The two Lodge of Wye sons we owned were exceptional female makers, and that influence shows up again here. In studying this pedigree, you'll also find that DDA Ginny 781 is a direct 27C daughter. Altogether, 2C traces three times in four generations to our famous DDA Melisa 824 cow family, stacking generations of maternal strength, fertility, and longevity.

DDA Carrolton 45W has been a tremendous sire for us, including siring the highest selling bull in program history — the 39Z bull that sold to Peebles Ranch in Texas for $42,500. The maternal grandsire, DDA Great Plains 57R, is a full brother to DDA Cooper 135U and was another no miss bull known for producing functional, long lasting cows. The presence of the 0668 cow family only strengthens this pedigree.

Another strong Ole Kenetrek 268 son. Ole Farms is the largest seedstock producer in Canada, and while size alone doesn't make a program better, the Olson family operates with many of the same foundational principles we value. This pedigree shows that alignment clearly. The grandsire, DDA Trouble Free 60Y, is a DDA Great Plains 77U son — making him a grandson of our influential DDA Melisa 824 cow family. The dam of 16C also traces to DDA Emblazon 27C, adding another layer of proven maternal strength and longevity. Altogether, this bull carries a stacked pedigree built around the cow families that have consistently moved our herd forward.

Studying this pedigree reveals one of the all time great cows — DDA Doris 442, a daughter of Favour of Wye. I remember Scott saying that Favour of Wye may have been one of the best maternal bulls ever produced at Wye Angus, a sentiment echoed by Larry at Shoshone Angus. Ironically, Scott was also the breeder behind Oak Lane Prism 410, another beautiful and influential cow. Favour of Wye is a Lodge of Wye son, making him a half brother to both DDA Lodge E5H and BC 0668.

Like 2C, the DDA Kenetrek 24C is another line bred descendant of our great DDA Melisa 824 cow family. Melisa 824 is featured in the Angus Hall of Fame book of females, and her son, DDA Emblazon 27C, appears in the Hall of Fame book of sires — a testament to the strength and longevity of this maternal line. The dam of 24C, DDA Ginna 3130, is a daughter of DDA Great Plains 77U and DDA Ginna 850. Ginna 850 produced a Fahren of Wye son that Scott Shively of Oak Lane Farms purchased years ago, known as DDA Fahren 58F. He is a bull you would see more often in our pedigrees if we relied more heavily on AI. Altogether, 24C carries a pedigree stacked with the cow families and sires that have consistently delivered trouble free, productive daughters for decades.

These DDA Great Plains 77U sons consistently develop into the kind of mother cows you'll want more of. The dam, DDA Melisa E808, is a beautiful Lodge of Wye daughter out of our famous DDA Melisa 824 cow; a cornerstone female whose influence runs deep in this herd. On the dam's side you'll also find a Noble Jasper daughter. Many years ago, Dave Noble purchased a Favour of Wye son from us, and we later bought a bull from him named Noble Jasper 6039. Favour of Wye, a Lodge of Wye son, was widely used in the early 1970s and became known around the world for the quality of his daughters. That maternal strength shows up again here. At the very bottom of the pedigree is DDA Melisa 174, another member of the same Melisa cow family that has earned a long standing reputation for producing exceptional mother cows. This pedigree is stacked with generations of proven maternal excellence.

Both the sire and dam trace directly to Pinebank — a herd known for exceptional feet and structural correctness. One thing we've learned from our program is simple: when feet are bad, you cull them. That approach has produced consistently sound cattle for decades, long before foot quality EPDs existed.

While EPDs can be helpful, they are no guarantee of good feet. In fact, after years of selecting heavily by numbers, AAA discovered they had nearly ruined foot quality across the breed. Now there is an EPD to address the issue, but numbers alone won't solve it. The only reliable way to improve function is to breed cattle that already have it — exactly what this pedigree represents.

Banjo, Pinebank 202, and Lodge of Wye — all three influential lines appear in this pedigree. There is tremendous function and longevity here.

The dam of 177U stayed in production for 19 years, and her mother, 368, for 22 years. Some say longevity is low inheritance; I say really? The only way to achieve function is to breed animals that have function. The dam side is equally strong. The mother of Pinebank 202 stayed productive into her late teens, and the daughters of E5H — a son of our famous Melisa 824 cow — also remained in production for many years. This pedigree is built for cows that last.

This pedigree is full of good cows and sires. The 133Y traces to the great DDA Ginny 458, dam of our 45W bull. The 15X line traces to DDA Pinebank 50H, DDA Fahren 21X, and the 0668 bull. The 89U bull carries the influential 674 cow as his dam — a Pinebank 41/97 daughter. This is a pedigree built on proven maternal strength.

I can't thank North Fork Angus enough for loaning me back the DDA Cooper 135U bull. He continues to uphold his reputation for siring beautiful young cows. Both DDA Galatea 859 and her dam, DDA Galatea 031, were model cows in our herd. With Cooper on the top side and DDA Ginna 969 — a Pinebank SE 10D daughter — on the bottom, this bull is an excellent choice.

This pedigree is a great example of how a cow can influence a herd even when she doesn't appear in the first four generations. DDA Melisa 824 does not show up until after the fourth generation, yet she appears multiple times beyond that point. In my opinion, she will have significant influence on DDA George 46C. Some writings suggest that cows or bulls past the fourth generation have very little impact, but when the same cow appears repeatedly, her influence can be substantial. Genetics is a complicated system, and we may never know the exact extent — but her presence matters.

These good DDA Bar Lad 177U sons just keep going. I am sure I have mentioned the quality of his mother, DDA Hana 940. She remained in production until she was 19 years old. Her mother, Diamond Henretta 368, stayed in production until she was 22. She was here in 1988 when I came home to the ranch, and my father had bred her. We saved another son of hers, DDA Alliance 142V, and are still using him today. That should give you an idea of what I think of this cow family. I also see a great deal of function and longevity throughout the maternal side of this pedigree. DDA Jody 812 is a good Noble Jasper 6039 son. Dave Noble is a breeder in Wyoming who has used many Shoshone bulls. He traces back to DDA Favour 19H, a good son of Favour of Wye. DDA Jody 335 is also a daughter of Favour of Wye.

Many of the best maternal lines in the breed appear in this pedigree. Starting at the top: 177U is out of DDA Hana 940, who stayed in production for 19 years, and her dam for 22. Pinebank 202's mother stayed productive into her late teens and was sold to Hauge Angus Ranch as a donor cow. OCC Great Plains produced some of the finest cows in the breed. DDA Galatea 859 served as a donor in both the Loyning Angus and Wyatt DeVries herds. Emulation 30K was an Emulation 5522 son, and breeders who used him said he produced some of their favorite daughters. Melissa 121 carries DDA Lodge E5H and 27C — both tracing back to the famous DDA Melisa 824 cow.

DDA Kenetrek 51C carries a tremendous pedigree, tracing to Lodge of Wye many times. Lodge of Wye was one of only about a dozen bulls ever recognized as being completely free of genetic defects — a rare distinction that speaks to the strength and reliability of that line. As an example of how highly we regard Lodge of Wye, we purchased a Favour of Wye son at last year's Wye Angus sale. Favour of Wye, himself a Lodge of Wye son, is arguably even better known for the daughters he produced. That influence shows up clearly in this pedigree, stacking generations of proven maternal quality.

DDA Sober Up 53C is a direct son of DDA Alliance 142V and a maternal half brother to 177U. His dam stayed in production for 19 years and his granddam for 22 — possibly a breed record. When you select bulls from cows that have proven their ability to produce trouble free daughters, you reap the benefits for years. The dam side of this pedigree is built with the same trouble free function in mind.

We were unable to determine his dam through DNA testing. She was most likely an older cow that was never DNA tested. Regardless, this good 177U son is 100% Diamond D Angus genetics. He is a son of the great DDA Hana 940 cow. We are currently using the last two sons she produced. Hana 940 remained in production until 19 years of age, while her dam, Diamond Henretta 368, stayed productive until 22 years old. Longevity and productivity run deep in this cow family.

A father on daughter mating. If you value consistency and trouble free genetics, this may be your bull. There is very little chance he will sire offspring that differ from the type and function of himself or his dam. His maternal line is exceptional: DDA Hana 940 stayed in production for 19 years, and her dam for 22. His maternal grandmother, DDA Sandy 064, traces to DDA Great Plains 77U — a major bonus. The dam of 77U is DDA Melisa E808, a Lodge of Wye daughter tracing back to DDA Melisa 824. This pedigree is stacked with longevity.

DDA Bar Lad 177U appears as the sire of this bull. He is a son of our famous DDA Hana 940 and a grandson of Diamond Henretta 368. Few cows appear in pedigrees with this kind of age and still show natural calves. The 368 cow, born in 1983, was here when I returned to the ranch in 1988 — though we didn't yet understand her value. The dam of this bull is Shoshone bred, adding even more maternal strength and structural correctness.

DDA Back to the Future 73C is bred for function and longevity. I've spoken many times about his dam, DDA Hana 940, and her remarkable record. She bred 18 times without ever missing, her feet stayed sound for 19 years, her udder held up through 18 calves, she never caused calving problems, and her production stayed strong year after year. She passes this stability to the next generation — just as cows lacking stability pass on problems. This is exactly why cows don't last in the mainstream. This bull carries the kind of durability that matters.

This is a half brother–sister mating to the great Pinebank SE 10D bull. The Pinebank herd in New Zealand is known for exceptional correctness, especially in feet and legs. That level of structural soundness has been a hallmark of the Pinebank program for decades. Because of that, there aren't many options in this pedigree that aren't correct; the influence of Pinebank SE 10D ensures a high degree of functional structure throughout. This mating brings together the kind of proven genetics that consistently deliver cattle with sound feet, strong legs, and long term durability.

Take a look at this impressive Ole Pinebank 775H son. Diamond D Angus has been breeding functional, practical Angus cattle for over 60 years, and it takes that level of long term dedication to achieve the kind of consistency you see in this pedigree. When a program commits to disciplined selection for function and longevity over multiple generations, the results show up in cattle that simply work. Purchasing a bull bred with this type of discipline only makes sense for anyone who wants dependable, long lasting mother cows in return. This pedigree reflects decades of thoughtful breeding aimed at producing cows that stay sound, fertile, and productive year after year.

DDA Great Plains 77U
DDA Kerry 853

I see full sisters lined up in this pedigree, which is always a sign of intentional, disciplined breeding. DDA Melisa E703 is a full sister to the dam of DDA Great Plains 77U, and when you stack great cows this tightly, the outcome is predictable — you keep siring great cows back into the program. There simply aren't many other choices when the maternal quality runs this deep. His dam is a DDA Alliance 142V daughter, and what a bull 142V has turned into. At 9 years of age he is still going strong, which is unusual for a bull to remain active in a multi sire breeding group at that age. That kind of longevity speaks volumes about structural correctness, fertility, and overall function. I also see DDA Pinebank 50H in the pedigree, adding another layer of proven maternal strength and durability. This is a pedigree built on cows that last, bulls that stay sound, and genetics that continue to deliver year after year.

Another strong pedigree featuring the influence of Great Plains 943G. His dam is a DDA B&T 18K daughter; a sire that produced some of our favorite cows in the herd, including this bull's own 9 year old mother. That kind of longevity and dependable maternal performance is exactly what we expect from the 18K line. With Great Plains 643G on the top side and the proven maternal strength of DDA B&T 18K on the bottom, this bull carries the kind of genetics that consistently deliver functional, long lasting mother cows.

I've mentioned before that the DDA Carrolton 45W son, DDA George 39Z, was our all time high selling bull — selling to Peebles Ranch in South Texas for $42,500. DDA George 84C carries a similarly strong pedigree. His dam's sire is DDA Great Plains 57R, and her dam is DDA Galatea 859 — a model cow in our herd who later sold to Loyning Angus and Wyatt DeVries. This bull carries generations of proven maternal quality.

What a great pedigree DDA Lad Boy 85C carries — every position is backed by excellent cattle. We've talked many times about how impressive 124X has become, and there are no surprises when studying his pedigree. His sire, DDA Bar Lad, may go down in history as the bull with the most natural calves, backed by a dam and granddam who stayed in production for many years. His dam, DDA Wendy 8122, may be my favorite Pinebank 202 daughter. On the dam's side is DDA Kerry 9100, a DDA Emblazon 27C daughter. Someone recently told me that 27C daughters may be the best cows we've ever raised — and they may be right. The maternal line continues with DDA Kerry 834 and her dam, both excellent cows. I also see DDA Kerry 680, a paternal sister to DDA Melisa 824, who appears again as the dam of 27C. This pedigree is stacked with maternal strength.

Dda Melisa 044

Nearly every cow in this pedigree traces back to DDA Melisa. We used the Melisa name long before DDA Melisa 824 became famous. At the very bottom of this pedigree, the mother of 824 appears. DDA Melisa 179 also traces to 824 and was a Shoshone 130 daughter — the same cow family found in the pedigree of Jad Fremont Z6306. In later years, John purchased the mother of Shoshone 130. I also hauled a 27C son out of Texas that John bought several years ago. This pedigree is full of proven maternal influence.

After using multi sire breeding groups, I often stand in awe of what the results show — and this bull is no exception. The 859 cow was a model cow in our herd, looking exactly like her mother. DDA B&T 18K is her maternal brother, and some of our favorite cows are B&T daughters. I have no doubt about the quality of daughters you'll get from this mating. OCC Great Plains may be one of the best maternal bulls OCC ever produced, and at the bottom of the pedigree you'll find 0668 — another sire known for producing great cows. DDA Zelda 736 also appears, and our great 580 cow is linebred here. Many of the cows that put Diamond D Angus on the map show up in this pedigree.

Another outstanding DDA Bar Lad 177U son. I've talked many times about his mother, the DDA Hana 940 cow — and for good reason. She turned into an absolutely incredible female. In the fall of 1999 we had the opportunity to sell her, and I'm very glad we declined that offer. Her influence has shaped this herd in ways that are still evident today. We are currently using her last two sons, DDA Pinebank 142V and DDA Bar Lad 177U. Both bulls continue to prove themselves, and they will be the sires behind many great cows in the future. Their combination of longevity, structural correctness, and maternal strength is exactly what we strive to produce. This pedigree reflects decades of disciplined selection for cows that last; and bulls that keep breeding long after most others have slowed down.

DDA Bar Lad 177U is remarkable. If you are selecting for function and longevity, you're in the right place. The average age of cows in the mainstream has dropped below five years — yet the breakeven point on a cow is about five years. You don't receive your first "paycheck" from a cow until she is nearly three. It's a travesty that most people selling bulls have not placed more emphasis on function and longevity. They certainly have good EPD numbers — but EPDs don't keep cows in production. Longevity does.

Multi sire breeding groups allow you to enjoy the benefits of increased fertility. The bull with the most testosterone, libido, and athletic ability will sire the most feminine, fertile daughters — and those are the females you keep as replacements. Many people selling bulls do not select for the most fertile cows or bulls. This mating does.

DDA Cooper 135U was a busy boy this year. This pedigree is full of proven longevity. I've talked about the goodness of 859 before, but the dam side of this pedigree is equally impressive. The fact that we are still using the 0668 bull 20 years after he was born tells you what we thought of him. We would still be using his half brother if we weren't nearly out of semen. I've also come to appreciate the advantages of multi sire breeding groups. Part of the reason I moved to them is because I'm getting too old to AI like I once did — but the benefits became clear over time.

DDA Cedar Ridgee 34M
DDA Irma 290

Last but not least in this catalog. DDA Nebraska 180C carries DDA Stella 443 twice within three generations. Stella 443 was a foundational cow used in building the HR Angus herd in Alliance, Nebraska. HAR Pinebank 202 is one of the sires descending from her influence — a tremendously good looking, very correct bull. This pedigree closes the catalog with the same strength and maternal quality seen throughout.

BW	Wt.	Cow/Calf Ratio	Cow/Calf Ratio Adj.	SC	Hip Ht.	Calving Ease

Beef Image Analysis (BIA) Ultrasound

BIA live animal carcass ultrasound is an automated, chuteside software system that captures images and calculates trait measurements on an objective basis. The traits determined by BIA ultrasound software are:

Ribeye Area/Hundred lbs Live Weight.....REA/CWT
Ribeye Shape Score.....SHAPE
Percent Intramuscular Fat.....IMF
Backfat Thickness.....BF
Tenderness Score.....TEND

Ultrasound Explanation

Ribeye Shape Score - Indicative of desired shape of the ribeye muscle. Correlated to eventual Yield Grade. Cutability, and % Retail Product. Score ranges from 0.0 to 1.0. Acceptable score is 0.35 or greater. Ideal score is 0.50 or greater.

Tenderness Score - Correlated to actual Warner-Bratzler Shear Force (WB) in carcass ribeye steak at 12th rib location. Correlation Coefficients between WB and TEND currently average 0.85 - 0.87. Score ranges from 10.50.
10 - very tender
20 - tender
30 - slightly tender
40 - slightly tough
50 - tough
Ideal score is 25 or less. Acceptable score in yearling bulls is 28 or less.

The ultrasound data on the following page is color coded. This is to assist you in analyzing the data quickly.
Blue - indicates superior numbers for that trait.
Purple - indicates good numbers for that trait.
White - indicates acceptable numbers for that trait.
