They Can Take it

**Yes, it's just a bunch of horses standin' out there in the rain.
The reason they are doin' it is easy to explain.
there is no shelter handy, so to travel aint no good;
And they wouldn't go into a barn, not even if they could.**

**It is just a little weather, and they're plenty used to that.
Like a cow boy in the open, livin' underneath his hat.
All the horses and the people that has lived their life outside.
Seems to have a constitution that can take it on the hide.**

**Without a bit of thinkin' I could tell you right from here,
Of horses livin' on the range as long as thirty year.
While the horses that's in stables, and was always roofed and fed.
Lots of them before they're twenty, has been hauled off plenty dead.**

**So it seems the way with people, and it seems the way with stock.
And the cedar grows the toughest when it's right amongst the rocks.
That's why horses, men, and women, if they're made of proper stuff.
Gits along a whole lot better if they're raised a little rough.**

- Bruce Kiskaddon

Welcome

Thank you to all of you for your interest in our program here, and welcome to our 2nd annual Loyning Angus sale.

As our "Simply Maternal" motto suggests, we are all about maternal functional efficiency. In our commercial herd, the cow that goes unnoticed the longest is the best cow. She is the cow whom we've never had to interfere with in any way. She does her job and never draws negative attention to herself by under producing. In a range cow outfit, the cow that overproduces generally works herself out of a job. So, we're back to that old cow that has done her job well enough within your environment/management system who as your trailing along one day, you wonder to yourself, "Who is that cow? She is ten years old, and I don't really remember anything about her." I'll tell you who she is. She is your most profitable cow. She is the premise of our entire breeding program. Our primary goal is to raise bulls that go out and produce functionally efficient range cows for our customers. You'll find the steer calf mates produced will be very acceptable in terms of terminal merit within your system too.

The ideal cow in our mind's eye is feminine headed, long necked with a strong level topline and is wedge shaped in her body composition. She is structurally correct, slopes off slightly from hooks to pins, is strong hocked, and has good feet. She has an excellent udder, and is moderate in her milk production. She is hormonally balanced as evidenced by her sleek and glossy hair coat. She is highly fertile. She has a soft and intelligent eye. This cow is of exceptional maternal disposition. Her whole world revolves around her calf, and she wants and loves to be a mother. She knows how to go out, forage, and scrap for her living if need be. This cow is closely bred for added prepotency to produce consistently and be able to renew herself through her daughters. These unquantifiable traits/qualities seem to get forgotten in the world of bigger is always better and biggest is best. In the race for EPD, carcass, DNA marker superiority, or whatever it may be, maternal traits are generally the first traits to be left in the dust. Contrary to popular belief, you can't have it all. There are tradeoffs in everything. At Loyning Angus, we bowed out of the race a long time ago. Hell, we were never really in it. We want to focus on making the mother cow better at what she does. She is our factory after all, and we want to optimize her. Instead of single mindedly worrying about the quantity that our factory produces (at all costs), we want to optimize the functional

efficiency of our factory and focus on the quality of what she's producing. Our focus is "Simply Maternal." We want you, our customer, to be able to produce females that enhance your bottom line through the ability to limit feed and labor expenses. Should you have specific end product goals in mind, you have the flexibility to terminally mate those females and hit those targets. We must remember that terminal traits belong on a plate and not in the replacement pen though.

With all that said, we run these cows as real as we can. They range on high desert native grass pastures for 8-10 months of the year depending on what mother nature will allow. We don't prop them up, and if they are going to fail, we let them. During the two to four-month period they aren't on range grass, they eat hay. This winter they came out of the hills about the 10th of February. They are currently being fed 22 pounds of first cutting orchard grass hay and 2 pounds of Muggli Cake. These cows would be an extremely profitable set of commercial production cows for any range cow outfit on the northern plains. They know how to get it done.

We breed our running age cows in one multiple sire breeding pasture. This ensures that the herd bulls have to compete in order to mate and propagate themselves. Parentage is then determined on the resulting calves through DNA. During our fall preconditioning work, we choose the bulls that make the cut and our replacement heifers before DNA parentage results are known. This eliminates any preconceived notions on who ought to be the best. None of "He's out of old such and such he ought to be okay." They either make it, or they don't. All of the sires to these bulls breed/bred cows. The same can't be said about many AI stud sires as they never leave their run, and when they do, it is usually to be canned as the industry has moved on to the next latest, greatest thing.

As you look through our pedigrees, you will see that part of the bulls selling are registered and part are commercial purebred bulls. One group of the commercial purebreds stem from females purchased starting in 1993 from Cole Creek Angus. We didn't keep registration papers up on these cows, but we did keep track of pedigree. They are 100% purebred Angus. The Cole Creek based cows' sons will have a C following their name in the catalog. The other group stems from a set of cows purchased from my late friend Larry Leonhardt at Shoshone in 2011. The solid foundational base behind these bulls, with our own environmental and selection pressures applied to make "Simply Maternal" Loyning Angus cattle. The Shoshone based cows' sons will have an SH following their name in the catalog.

This set of bulls was weaned off of native grass pasture, mother's milk, and salt. At weaning they went on free choice orchard grass hay, two lbs. of R30 Holden Bull Challenger and FlaxLic tubs. They are now worked up on to 13 lbs. of R40 Holden Bull Challenger and are consuming about 15 lbs. of orchard grass hay and their FlaxLic. On average, they have gained 3.06 lbs. per day. The bulls were weighed onto test 11/24/19 and were weighed again on 2/26/2020 for a 95-day test. The gain ratio was figured during that period. The ET bulls ratios were calculated as a separate group. We slowly grow these bulls out in order to ensure structural soundness and set them up to succeed in rough breeding pastures. We understand that the breeding season is a marathon not a sprint and marathoners aren't obese. These bulls are developed to go out and stay strong and productive throughout the entire breeding season and seasons to come. Yes, they will work down some, but the bull that doesn't generally isn't doing much. We will not be clipping the bulls as we like to be able to see them in their full hair coat. Their coat is a good indicator of masculinity and hormonal balance. These bulls have been handled almost exclusively horseback for their entire lives and are generally easy to handle and respect a saddle horse.

I would like to thank Dennis Voss at Horse Butte for being a mentor and one heck of a good friend to me. Our herd is strongly influenced by Horse Butte genetics, and they are a big part of our program and its forward progress. Scott Shively thank you for the opportunities you've afforded us with the 6306 cow and the connections you've help us make my friend. I want to thank all of my friends that I regularly "talk shop" with. I enjoy the hell out of it. Next I want to thank all my good neighbor friends/customers. We wouldn't and couldn't be here without you and all of your help! Grandma Bonnie, without your good summer grass and moral support we couldn't do it. Thank you! Dad, thank you for your patience, encouragement and stockman knowledge. Your "range savvy" guidance has a strong influence on us pressuring the things we pressure in our program. I know I can get gruff and hard to be around sometimes, but I always appreciate everything you do for us. Mom you're about the best MOM (notice the capitalization) a guy could ever want. Thank you for always having my back. Thanks to Brook's family for always helping us whether it's babysitting or working cattle. We know we can always count on your help. Brook, thank you for not killing me during our work on this catalog.

If you have any questions, please don't hesitate in letting us know. We are honored by your consideration of our program.

Ben Loyning

ALOYNING ANGUS

Simply Maternal

2nd Annual Bull Sale

Thursday • April 2, 2020

Sale Starts at 5:00 p.m.

Auctioneer

Bronson Smith

Sale Day Phones

Ben (307) 271-1786

Brook (307) 202 -0246

Sale Location

Deaver Town Hall, 113 1st Ave W, Deaver, Wyoming (13 miles South of the ranch)

Accommodations

We are 60 minutes South of Billings, MT and 40 Minutes North of Powell, WY

Sale Format

Bulls will NOT be at the sale location. We will play a pre-recorded video of the bulls at the auction site for buyer viewing during the live auction. We encourage you to come inspect the bulls live prior to the sale if possible.

Terms & Conditions

The cattle will sell under the standard terms and conditions as recommended by the American Angus Association.

Herd Health

Bulls have been vaccinated twice (branding/preconditioning) with Alpha 7 MB1, One Shot BVD and Inforce 3, once with BoviShield Gold One Shot and Somubac (weaning), and in November were poured with CleanUp II and injected with Dectomax.

PAP Tested

Bulls were PAP tested March 3, 2020 by Dr. Lanny Weddle from Walden, CO. PAP test was at 4,750'. If you have any questions regarding PAP, call Dr. Weddle at (970) 723-8314. We recommend if bulls will be used over 7,500' that they have a PAP score of 40 or below.

Fertility

A breeding soundness exam will be completed by Matthew Asay, DVM and results will be available sale day.

Delivery

Delivery is free within 300 miles and at cost thereafter. If you pick your bulls up within the week following the sale, a \$50 per head discount will be given. Delivery will take place within the month following the sale. If you need your bulls sooner than that, please let us know. Feed up until the first of May is on us and will cost \$2.50 per head per day thereafter if you want us to keep your bulls.

We will deliver bulls going to Canada to the nearest American Port of Entry.

All proper health work will be completed for shipment within the continental US. Bulls selling to Canada, we will split health testing costs 50/50.

Liability

Everyone attending this sale does so at their own responsibility and risk and without liability on the part of the owners or their employees.

Inspection of Bulls

The bulls are available for inspection any time prior to sale day at the ranch, 379 Quarry Road, Warren, Montana. The day of the sale we ask that you hold off until noon so that we can prepare the bulls for more convenient viewing. Videos will be posted online at BillPelton.com.

Retained Interest

Loyning Angus will be retaining an interest on select bulls. These will be noted in the footnotes.

Guarantee

Bulls sell as guaranteed breeders. If a problem arises, we will deal with it on a case by case basis. Your success is important to us, so we want these guys to do a good job for you.

Bid by Phone

We will have the conference call option with Bill Pelton, or contact Ben (307)271-1786 prior to the sale.

Sale Terms

Cash, to be paid sale day.

Sale Order

Bulls sell in catalog order which is by age. Oldest to youngest.

*Please stick around after the
sale to socialize and enjoy a
taco bar supper.*

Sale Day Conference Call

It's as easy as

1. Pre-Register for your buyer number
2. Receive toll free call in # and pin
3. Get last minute instructions for call

Give Bill Pelton a call in advance

"Our goal is to get you in the seats but if you can't make it on sale day, we're fixin' to get you On The Line"

Sire of Lots 91, 94, 95

Viking is the sire to three of the ET bulls in the sale. His sons in our sale are all out of the Shoshone Frances 6306 cow. We cannot be credited with the Viking x 6306 mating as it was made by Scott Shively. The embryos were purchased as an insurance policy due to the advanced age of 6306 and the uncertainty of how she would flush. We put in five of these embryos and got five bull calves. Viking has a strong following and many of those who've had his progeny feel they were among some of the best cattle they ever had. He is said to have sired yearlings that rapidly gain weight on grass and broody, sturdy females. Viking is one of the few bulls in the breed who was proven genetic defect free through the mating of him to 35 of his own daughters without issues in the resulting progeny. Bred by Shoshone Angus and owned by Shoshone Angus and Ben Lawson.

Sire of Lots 915, 922, 927, 929, 930, 937, 942, 943, 953, 954

4133 came to us in-utero from our good friends Dennis and Erica Voss at Horse Butte Ranch. I had ridden a young horse for Dennis and Erica for a couple of years and my payment was our HBR Shoshone Ester 7133 donor cow, a heifer calf at her side and 4133 in her belly. Needless to say the best horse trading that we've ever done. As a yearling 4133 had a deferred semen test due to immaturity (he was like 9 or 10 months old) but we turned him out with our multi-sire group anyhow. When we weaned calves the next year and pulled DNA we found out that 4133 had more calves make our cut than any other sire that we were using at the time. He's never looked back and it doesn't look he'll relinquish the title of head honcho anytime soon. The females that he's sired so far are feminine, sharp fronted, wedge shaped, with excellent udders, and are attentive mothers of excellent maternal disposition. His pedigree is stacked with ideal type females and he is a refining influence as a sire of maternal characteristics. 4133 himself is just an average bull in terms of length and thickness. He has outstanding testicles, is structurally sound, is agreeable disposition wise, and is a top of the line breeding bull. He is spot on in terms of masculinity. He stacks up the Horse Butte matriarch Shoshone Ester 3116 multiple times with appearances of Esters 3131, 3128, 3141, and 9116 in his pedigree. A very strong maternal heritage built on a closebred, prepotent foundation. Help yourself to some of his really nice sons. Bred by Horse Butte Ranch and proudly owned by Loyning Angus.

Sire of Lots 926, 952, 961

60 is a product of our ET program. He is sired by Horse Butte 7128 of 3128 and out of Shoshone Ester 7133. 60 traces his lineage to Shoshone Ben 99-1012 on the topside. Ben was known for leaving functional females and sired extreme libido in his sons. Shoshone Ester 3116 anchors the pedigree top and bottom. 7128, his sire, suffered a broken hind leg as a prime aged bull and still serviced more cows on three legs than most can on four. 60 is a good footed bull with excellent testicles and extreme libido. He is a mover and a shaker in the breeding pasture that drops in on the party to make sure no ladies are in need of attendance and then onto the next one. Loyning Angus bred and owned.

Sire of Lot 941

64 is a product of our ET program. He sired by Horse Butte 796 of 9116 and out of HBR Shoshone Ester 7133. 64's pedigree is one of beneficial outcrosses that enhanced certain traits without disrupting others and it is built upon the solid foundation of Shoshone Ester 3116, the matriarch of the Horse Butte maternal program. He is a sound made bull with a quiet disposition. He reminds me a lot of his grandsire HBR 46C Ambush 917 who did such a good job at Horse Butte for so many years. Loyning Angus bred and owned.

Sire of Lots 940, 945, 957

612 is a product of our ET program. He is sired by Horse Butte 6141 of 3141 and out of Shoshone Ester 7133. The pedigree of 612 is very pleasing, symmetrical and strongly anchored by Horse Butte matriarchs Shoshone Ester 3116 and Shoshone Ester 3128. He has no choice but to sire the maternal traits we strive for. 612 reminds me strongly of his sire. He is balanced made, strong topped, appropriately masculine with good feet and obviously he can get it done in the breeding pasture. Loyning Angus bred and owned.

Sire of Lots 97, 923, 924, S915

Equinox is a product of our ET program. He is a full brother to the Erector bull here and Loyning 6141 Encore 71 at Scott Shively's in ND. Equinox as an individual is an impressive beast. He's long, smooth, thick, and sound. His feet are good and he has big, compositionally correct testicles. His long neck and handsome head are both things I feel that are conducive to making beautiful females. Maybe his best trait of all is his quiet, confident disposition. He carries himself with the mystique of a herd bull. The flush sisters of Equinox are all near ideal in their type, feminine, long, and broody, with excellent udders. As a sire his male and female progeny are of equal quality, they are a chip off of the old block. Equinox calves are attractive, long, smooth, easy doing, with quiet dispositions. Bred and owned by Loyning Angus.

Sire of Lots 900, 902, 903, 904, 905, 907, 908, 958

Evolver is a product of our ET program. He's a cocky and confident bugger. He is thick and expressively muscled as his pedigree would indicate. He fluidly strides atop impeccable feet and legs. Evolver is an attractive and stylish bull with a handsome head and he always catches visitors' eyes. His disposition is quiet but he keeps his head on a swivel ready for anything. The last couple of seasons we have used Evolver as a heifer bull and there has been little need of assistance. His calves are born easy with plenty of get up and go. We have three flush mate sisters to Evolver who are functionally efficient, feminine, range cows, with correct structure, beautiful udders, and strong maternal instinct. An outfit ought to have a whole herd like them. The Evolver sons have a distinct muscle pattern to them when compared to the other bulls in the pen and have done well on test. Most of the Evolver sons could be used as heifer bulls. Female calves from Evolver look like they'll make excellent range cows. They are moderate, really feminine, and remind me of his flush mates. Evolver has earned his way onto the cows for this upcoming breeding season. Bred and owned by Loyning Angus.

Sire of Lots 934, 935, 938, 939

Establishment is a product of our ET program. He is a Horse Butte 1116 of 3116 out of our JAD Ester 3750 cow making him a flush brother to 76 and maternal brother to Equinox and Erector. Lots of Shoshone Ester 3116 in this guy which we consider a good thing. He is a bit larger framed than our other herd bulls, has excellent feet, legs, testicles and is an intelligent cow breeding machine. He added a tick of frame to his calves and they are long strided, easy moving cattle that look like they'll have the ability to cover a lot of country in a day. I'm talking miles. His sons should leave you some excellent range females. Loyning Angus bred and owned.

Sire of Lots 920, 931, 946, 959, 996

Erector is a product of our ET program who's also a full brother to Equinox and Loyning 6141 Encore 71 at Scott Shively's in ND. This bull took over as the dominant bull in the breeding pasture during the 2019 breeding season. He controls his territory with swift and terrible violence to any other bull who dare enter. If you don't want the neighbors bull breeding your cows this is a good bull to have around. As an individual he is strong topped, deep bodied, and is sturdy in his bone structure. He has excellent testicles and a soft disposition. His sons are sound made and soggy middled bulls. His daughters look feminine and broody. Erector's flush mate sisters are high quality, functionally efficient examples of maternal finesse. Loyning Angus bred and owned.

Sire of Lots 906, 909, 910, 917, 933

76 is a product of our ET program and is a full brother to Establishment. He is as high libido as they come. If don't want the cows bred then you better throw a cage around old 76. As an individual 76 has the look of a really solid maternal sire to me. Nothing really stands out about him but you really can't fault him too hard either. He's just a steady bull. He has sired some really steady sons in this offering. His daughters are refined, feminine, easy fleshing, top end range cow prospects. His flush mate sisters are functionally efficient and productive. Loyning Angus bred and proudly co-owned with Boone Taylor and his Gals at the Y Bar in Bicknell, UT.

Sire of Lots 9

Forte is a bull that has been on my radar for a long time. Years ago I went on a ranch tour and it seemed like every time I asked "What's that good cow?" the answer was "She's a Forte daughter" so I told myself we need to make sure and incorporate him into our program some day. Forte is being used here for his calving ease, newborn calf vigor, range-ability, good feet, and those excellent females mentioned above. A shot of Forte will enhance any big country range cow outfit. If survivability=profitability on your outfit, look hard at these Fortes. They can get it done. Bred by Dale Davis and owned by Horse Butte Ranch, Dale Davis, and Dave Duncan.

*Flush mate sister to Loyning Equinox 7
and Loyning Erector 75*

We start the sale with a Forte embryo bull out of the Shoshone Frances 6306 cow. He is long, really thick, with a strong top, good feet, and a stylish pattern to him. He has a unique pedigree and should sire excellent range cows. The male progeny from this bull should be attractive, stout, and easily marketable. Could be used as a heifer bull. *Loyning Angus will retain 1/2 semen interest in this bull.

Pronounced fray-er. Freyr is a widely attested god in Norse mythology associated with battle, virility, peace and prosperity, with sunshine and fair weather, and with good harvest. Freyr is a powerful, thick Viking x 6306 ET bull that displays a ton of libido and is at the head of the pecking order amongst his peers. He should grow out to be a very impressive specimen. I would expect some growth from him and if his daughters are like his mother, they'll be solid, functional cows. *Loyning Angus will retain 1/2 semen interest in this bull.

Excellent heifer bull. He has the aura of a herd bull about him, alert and confident. 97 is deep bodied, long, smooth, with good feet and good nuts. I affectionately call 97's dam "The Mother of Herd Bulls." She is a really nice young Forte daughter who was the first cow to calve last year and this year. She is long, feminine, and good uddered. She is near my ideal. 97's sire, Equinox is about as impressive as they get as an individual. I can't see how 97 won't sire excellent females. I really hate to sell this bull and would love to turn him out myself. *Loyning Angus will retain 1/2 semen interest in this bull.

This Equinox son looks a lot like his sire. Same head, same profile, long, and he has good testicles. His dam is a really solid, 9 year old 796 daughter that never misses. If you were to ask my Dad which cows were our best ones, he'd point you to the 796's. Nice bull to sire good pay weight steers and functional heifers. Could be used on bigger heifers.

An Establishment son with as many outstanding cows in the front end of his pedigree as you could find anywhere. With 3116, 3750, 3128, 6357, 6157, and 6146 all right in the first 3 generations it's a virtual "Murderers Row" batting lineup. A few of those cows make more appearances in the generations previous too. The bull himself is another high libido, long strided, rangey bugger. If sharp made, good uddered, functionally efficient females are what you're after, here's your bull. Prepotent, cow making, cow bull. *Loyning Angus will retain 1/3 semen interest in this bull.

612 son out of a WT54 daughter with good feet and a perfect udder. She is a nice example of the kind of cow that mostly goes unnoticed. She calves on time every year, raises a calf that is somewhere in the middle of the pack, and never screws up. That kind of cow pays the bills year in and year out in a commercial range setting. Cow bull.

Easy doing, smooth, thick made 60 son. His mother has a nice, feminine, wedge shape to her and is very functional. Stout cow bull.

Josie says "We'll see you next year."

Really stylish Esteem son here. He always catches my eye and reminds me quite a bit of his maternal grandsire 7196. His mother is a really nice cow. We sold a full brother in last year's sale and I thought he was one of the best buys of the day.

*Loyning Angus will retain 1/3 semen interest in this bull.

Thick made Esteem son. His mother is a smaller than average cow that always brings in a whale of a calf. She is 12 years old and has a perfect udder. This bull should sire excellent range cattle to harvest grass with. Cow bull.

Thick made, masculine 612 son from a really nice Shoshone 6356 daughter. His dam stems from the Frances cow family at Shoshone. She's a balanced type female who is near ideal in her type as a range cow. This is a good, sturdy cow bull.

Growthy, cocky 60 son. He's a show off, always bucking, playing and drawing attention to himself. His mother always produces bulls that make the cut and had her first heifer a couple days ago. I think she has/has had a son at darn near every one of our neighbors places. She's as functional and productive as one can be. Strong cow bull.

Last but not least, Wil's bull. He's the youngest bull in the sale and is out of a good 796 daughter with a perfect udder. Wil is only a couple of years from legal driving age and has pickups driving through his mind. He encourages you to bid away. Could be used on heifers.
