Welcome to the 24th annual Milk River Angus Bull Sale. The quality runs deep in this year's offering. The four consignors offer you a strong selection of optimal Angus genetics. Once again, the bulls were fed at Hould's Feedlot. A big thank you to Bruce and crew for another wonderful job. The bulls have passed a breeding soundness exam by Dr. Roger Baxter and have been carcass ultrasounded by Sonja Gregory. All bulls tested negative for BVD, PI and are tested free of known genetic defects. If you are unable to attend the sale, please call Bill Pelton, go online to www.LMAAuctions.com, or call any of the consignors. Bulls can be viewed at Hould Feedlot west of Malta. The evening prior to the sale, they will be available for viewing at Bear Paw Livestock. We look forward to seeing you sale day. Thank you to repeat customers and we look forward to meeting new customers.

Sincerely,
Breeders of the Milk River Bull Test and Sale

Sale Day Phones

Travis Buck 406/390-0555
Dexter Buck 406/799-2285

SALE LOCATION

Bear Paw Livestock • Chinook, MT

INSPECTION

Bulls are being fed and can be viewed at Hould Feedlot & Bull Center, Malta, MT. They will be transported to Bear Paw Livestock and ready for viewing the evening before the sale.

SALE ORDER

Sale order has been picked by each consignor.

ACCOMMODATIONS

Chinook Motor Inn 406-357-2248
Bear Paw Court 406-357-2221

TERMS & CONDITIONS

Payments must be made to the clerk at the conclusion of the sale. Payments must be made before delivery is made or the animal is hauled from the site, unless prior arrangements have been made.

All bulls sell under the standard terms and conditions as recommended by the American Angus Association. Sellers are reserving 1/3 revenue sharing interest on all bulls.

DELIVERY

Free within 300 miles & at cost beyond. \$50 rebate for every bull you take home the day of the sale. Bulls will be delivered within a day or two of the sale, unless prior arrangements have been made.

CALVING EASE

- ★ Recommended for Cows Only
- ★★ Moderate calving ease
- ★★★ Easiest Calving Bulls in the Sale

FIRST YEAR LOSS OF USE & MORTALITY INSURANCE

First Year Loss of Use & Mortality Insurance Milk River Angus Consignors have arranged for Stockmens Insurance Agency, LLC to make available Mortality/Loss of Use Coverage. See page 26 for further information. If you choose to purchase insurance, the Milk River Angus Consignors will pay half of the premium for you.

BIDS

Sight unseen satisfaction guarantee. If you cannot attend the sale you have three options to place your bid:

- Leave your bid(s) with the fieldmen, auctioneer, or consignors.
- Call in advance to Bill Pelton or consignors to Pre-register for the sale day conference call.
- Register at least several hours before sale time at LMAAuctions.com, to bid live online.

**Viewing of the bulls will be
the evening before the sale
5:00 pm - dark**

BID ONLINE AT LMAAUCTION.COM

HERE'S HOW IT WORKS:

1. Go to LMAAuctions.com (PC/Computer) or LMA Ringside (Available in App Store for Mobile Devices).
2. Click Login or Create New Account – New users must complete account registration
3. You will be logged in as a Viewer but not yet registered to bid
4. Click on Register to Bid Button next to Bear Paw Livestock
5. Complete the banking information and click on Register – It is recommended that you complete this step at least 2 days prior to sale day.
6. You'll receive an email from sale management once you've been approved to bid.
7. Remember to use either Google Chrome or Mozilla Firefox as your internet browser from your PC. Never use Internet Explorer.

OCC Cortez was the 2nd top selling bull from the 2017 Ohlde Cattle Company bull sale. Cortez is a moderate, soggy made bull. He exhibits the extra muscle typical of OCC cattle and stands on an excellent set of feet. He sires more performance than typically found in OCC cattle. The heifers are big volume, massive ribbed, broody females that look to make great cows. Owned with Ray Gardner and Hould Angus.

Sire to lots 49-62; He is a carcass bull, with lots of performance wrapped up in a beautiful package. With a good scrotal he collects and freezes extremely well producing high quality semen that has yielded a far above average settling rate, and his sons have semen checked "very good" at 12 to 14 months. Maternal family and offspring are slick haired, good footed, easy fleshing, fescue tolerant, and very efficient type cattle.

Sire to Lots 72,73,74,75, and 76
 The top selling bull of his calf crop at \$23,000, Ideal 4223 posted individual ratios of BW 77, Weaning 114, Yearling 114, and Gain 114. In the words of Ron VanDyke: "This line-bred Jorgensen bull is doing exactly what we had hoped. He is the most consistent heifer bull we have ever used, we had 300 heifers calve to him and only had to assist on three. This is a bull to keep your eye on as an outcross calving sire. We like this bull better every year, and his daughters look like they are going to be good cows." We are using this proven AI Sire on our heifers here at North Fork. He calves easy and shows good growth. His calves have done exactly what we were hoping for. They are arguably the most consistent set of calves we have ever had. His daughters are developing into outstanding looking females with no flaws at this point.

Sire to Lots 77,78,79, and 80

We chose Durango from E7 Angus because of his extra length, thickness, and volume. He has good feet and we are getting his second set of calves this spring. His daughters look very sound. As a bonus he is out of the Neville Blackbird T99 Cow who has been in production in the E7 Angus herd for 11 years. His dam has an excellent udder and very good feet. E7 Angus has several daughters from this dam working on Ede's ranch.

Sire to Lots 81,82,83, and 84.

This was our pick at the 2017 Connely Angus Ranch Sale. Remarkable 640's calves are showing very good growth. We calved our first daughters this spring. They are very pleasing females that have outstanding mothering ability. All of our Remarkable 640 daughters have calved in the first cycle. Remarkable 640 has eye appeal and is backed by a female maker pedigree. This bull is from the 12 yr old pathfinder CAR Miss Marie 769 cow.

What's better than a sale catalog rolled up in your back pocket?

**The catalog on your phone
that's *always* in your pocket!**

... and having it interactive!

- Watch videos, dictate or type animal notes, view color lot pictures, pedigree, current EPDs, performance data, and more all in one place.
 - Filter by Birth Dates, Sire, MGS, EPDs, and Weights.
 - Download data in Excel format for further sorting.
 - Select your favorites, even compare side by side to find what will best serve your program.
 - Notifications as more information is available and reminder of sale day.
 - Connect with the breeder quickly and easily.
- and more all within Ballyhoo Go!**

Use the app on your
iPhone
iPad
iPod Touch
Android Phone
or through
BallyhooPrinting.com

www.BallyhooPrinting.com
for Ballyhoo Go!
download links and tips

**Download the free Ballyhoo Go! app to
interact with the Milk River Angus catalog in a whole new way!!**

(Dam BR-2@87, WR-2@93) Heifer Bull. Extremely low birthweight genetics. Very moderate, deep ribbed dam with impeccable udder quality. Her production record was hurt by an injured calf. Grandam by BAR EXT 205 was a foundation donor cow that produced to 15 years of age.

Lot 47 pair

She is the full sister to the Lot 38 bull.

American Angus Association Selection Tools

Expected Progeny Difference (EPD), is the prediction of how future progeny of each animal are expected to perform relative to the progeny of other animals listed in the database. EPDs are expressed in units of measure for the trait, plus or minus. Interim EPDs may appear on young animals when their performance has yet to be incorporated into the American Angus Association National Cattle Evaluation (NCE) procedures. This EPD will be preceded by an "I", and may or may not include the animal's own performance record for a particular trait, depending on its availability, appropriate contemporary grouping, or data edits needed for NCE.

Accuracy (ACC), is the reliability that can be placed on the EPD. An accuracy of close to 1.0 indicates higher reliability. Accuracy is impacted by the number of progeny and ancestral records included in the analysis.

Calving Ease Direct (CED), is expressed as a difference in percentage of unassisted births, with a higher value indicating greater calving ease in first-calf heifers. It predicts the average difference in ease with which a sire's calves will be born when he is bred to first-calf heifers.

Birth Weight (BW), expressed in pounds, is a predictor of a sire's ability to transmit birth weight to his progeny compared to that of other sires.

Weaning Weight (WW), expressed in pounds, is a predictor of a sire's ability to transmit weaning growth to his progeny compared to that of other sires.

Residual Average Daily Gain (RADG), feed efficiency expressed in pounds per day, is a predictor of a sire's genetic ability for postweaning gain in future progeny compared to that of other sires, given a constant amount of feed consumed.

Yearling Weight (YW), expressed in pounds, is a predictor of a sire's ability to transmit yearling growth to his progeny compared to that of other sires.

Yearling Height (YH), is a predictor of a sire's ability to transmit yearling height, expressed in inches, compared to the that of other sires.

Scrotal Circumference (SC), expressed in centimeters, is a predictor of the difference in transmitting ability for scrotal size compared to that of other sires.

Docility (DOC), is expressed as a difference in yearling cattle temperament, with a higher value indicating more favorable docility in a sire's offspring compared to another sire.

MATERNAL

Heifer Pregnancy (HP), is a selection tool to increase the probability or chance of a sire's daughters becoming pregnant as first-calf heifers during a normal breeding season. A higher EPD is the more favorable direction, and the EPD is reported in percentage units.

Calving Ease Maternal (CEM), is expressed as a difference in percentage of unassisted births, with a higher value indicating greater calving ease in first-calf daughters. It predicts the average ease with which a sire's daughters will calve as first-calf heifers when compared to daughters of other sires.

Maternal Milk (Milk), is a predictor of a sire's genetic merit for milk and mothering ability in his daughters compared to daughters of other sires. In other words, it is that part of a calf's weaning weight attributed to milk and mothering ability.

Mature Weight (MW), expressed in pounds, is a predictor of the difference in mature weight of daughters of a sire compared to the daughters of other sires.

Mature Height (MH), expressed in inches, is a predictor of the difference in mature height of a sire's daughters compared to daughters of other sires.

FOOT SCORE

Claw Set (Claw), is expressed in units of claw-set score. A lower EPD is more favorable, indicating a sire will produce progeny with more ideal claw set, which is toes that are symmetrical, even and appropriately spaced.

Foot Angle (Angle), is expressed in units of foot-angle score. A lower EPD is more favorable, indicating a sire will produce progeny with more ideal foot angle, which is a 45-degree angle at the pastern joint with appropriate toe length and heel depth.

CARCASS

The genetic evaluation produces a single set of EPDs for carcass traits where the units of measure are in trait format and analyzed on an age-constant basis.

Carcass Weight (CW), expressed in pounds, is a predictor of the differences in hot carcass weight of a sire's progeny compared to progeny of other sires.

Marbling (Marb), is expressed as a fraction of the difference in USDA marbling score of a sire's progeny compared to progeny of other sires.

Ribeye Area (RE), expressed in square inches, is a predictor of the difference in ribeye area of a sire's progeny compared to progeny of other sires.

Fat Thickness (Fat), expressed in inches, is a predictor of the differences in external fat thickness at the 12th rib (as measured between the 12th and 13th ribs) of a sire's progeny compared to progeny of other sires.

\$VALUE INDEXES

\$Value Indexes, reported in dollars per head, are multi-trait selection indexes where a higher value suggests more profit. The \$Value is an estimate of how future progeny of each sire are expected to perform, on average, compared to progeny of other sires if sires were randomly mated to cows and if calves were exposed to the same environment.

Maternal Weaned Calf Value (\$M), expressed in dollars per head, predicts profitability differences in progeny due to genetics from conception to weaning. Increased selection pressure on \$M aims to decrease overall mature cow size and improve foot structure and fertility while maintaining weaning weights consistent with today's production.

Weaned Calf Value (\$W), expressed in dollars per head, provides the expected difference in future progeny preweaning performance from birth to weaning. Increased selection pressure on \$W increases weaning and maternal milk traits while increasing mature cow size.

Cow Energy Value (\$EN), expressed in dollars savings per cow per year, assesses differences in cow energy requirements as an expected dollar savings difference in daughters of sires. A larger value is more favorable when comparing two animals. Components for computing \$EN savings difference include lactation energy requirements and energy costs associated with differences in mature cow size.

Feedlot Value (\$F), expressed in dollars per head, is the expected average difference in future progeny performance for postweaning merit compared to progeny of other sires. The underlying objective assumes commercial producers will retain ownership of cattle through the feedlot phase and sell fed cattle on a carcass weight basis with no considerations of premiums or discounts for quality and yield grade.

Grid Value (\$G), expressed in dollars per carcass, is the expected average difference in future progeny performance for carcass grid merit, including quality and yield grade attributes, compared to progeny of other sires.

Beef Value (\$B), expressed in dollars per carcass, represents the expected average differences in the progeny postweaning performance and carcass value compared to progeny of other sires. This index assumes commercial producers wean all male and female progeny, retain ownership of these animals through the feedlot phase, and market these animals on a quality-based carcass grid.

CALVING SUPPLEMENTS

Last trimester and calving to breed-back interval is the most critical time for cow nutrition. Vitamin and mineral supplements support:

- ✓ Reduced calving problems
- ✓ Newborn calf vigor
- ✓ Improved colostrum quality
- ✓ Overall calf health
- ✓ Improved breed-back

Bio-Mos-

Fed 45-60 days prior to calving through turnout will reduce calf scours and improve calf health. Available in most products.

Granular mineral -

Bio Range and Blueprint both offer 100% organic (chelated) trace minerals for complete absorption, with no antagonistic effects.

Crystalx-

molasses based lick tubs containing protein and vitamin and mineral package.

Cake and Pellets

Bulk or Bagged
