BOWMAN AUCTION MARKET • BOWMAN, NORTH DAKOTA

**DVAuction**  
Broadcasting Real-Time Auctions

*Dear Friends and Hereford Enthusiasts,*

We would like to welcome you to the 54th Annual Mrnak Hereford Production Sale. This year marks our 75th anniversary of raising Hereford seedstock. We invite you to join us in Bowman, North Dakota for a great event on Valentine's Day. You are also welcome to join us Saturday night at the Mrnak Ranch for a pre-sale appreciation supper.

This year's set of bulls are big, stout and rugged. The 2020 season started with abundant subsoil moisture that carried us into mid-summer before the rain quit falling and the grass started to run short. Fortunately, we had a good growing season, which allowed us to put up high-quality forage. The mild winter has given our cows the opportunity to graze pastures longer than usual. The bulls have been in spacious pens allowing them to move freely and to remain clean and dry.

Once again, the bulls were hauled out to pasture in early May after their horns were tipped. The bulls were developed on grass through the middle of October with a high-grade mineral and 2 lbs of a 14% range cake as their only supplements. We believe this management technique ensures that only the top performance bulls will be offered on sale day.

... replacement females. These

## UPDATE

We are always searching for new ways to continue to select our herd bulls and cows the way we have for years – from the genetics required to be good uddered and problem free while consistently raising structurally sound, rugged calves with a Hereford disposition. We utilize an embryo transfer program to offer top performance herd bull genetics in volume, as well as create a stronger base of females.

We are excited to offer these bulls to our current and new customers. The bulls are ready to go to work. If a problem occurs during the season, please reach out to us. We will make sure you are taken care of. Our goal is to maintain satisfied customers that enjoy working with our operation. Feel free to stop by the ranch any time prior to sale day and look at this year's offering.

See you on the 14<sup>th</sup>!

*The Mrnaks*

| 2.8 | 53 | 86 | 25 | 52  | 352  | 113  |

## — Terms & Conditions —

- All terms will be cash unless credit is arranged before the sale.
- Each animal will be sold to the highest bidder. Bidding disputes will be settled by the aucitoneer.
- Health Certificates will be furnished.
- Animals sold will be fed and cared for at purchaser's risk for a reasonable length of time, or will be loaded and shipped as instructed.
- Bulls are guaranteed breeders. All claims must be submitted in writing to seller within eight months of sale date, along with semen evaluation and health report, at buyer's expense, from veterinarian. Seller shall have the privilege of trying bull after his return before making any adjustment. This guarantee is void if there is evidence of improper management in caring for the animal or the bull's inability to breed is due to sickness or injury which incurred after being sold.
- According to information available from the American Hereford Association and from our own experience, all our registered cattle in this sale are I.E. and diluter free. No further guarantee is implied.
- Any changes of information as it appears in this catalog will be announced at time of sale and such announcements will take precedence over printed matter in this catalog.
- **HEALTH:** These bulls are from a herd free from any known infections or contagious diseases or physical abnormalities. Dr. Johnson of West River Vet Clinic has been in charge of the health of the herd.

## — Delivery —

- 300 miles free delivery at buyers and sellers convenience.
- Cooperate on further hauls.
- No delivery on commercial lots.
- Will help with lining up transportation on any lots.
- Will feed for a reasonable length of time at the buyer's expence.
- All cattle left at Mrnaks to feed must be fully insured.

- This is the first offering of sons by 708. He is a son of Bohannon that is long bodied, deep ribbed, and stands on extra bone with excellent feet and legs. We purchased 708 from 7M Ranch in Nebraska when we saw him at the Black Hills Stock Show in 2019. We have been excited about his offspring since birth and are glad he is part of our breeding program. His sons are deep bodied, stout made and very correct in their structure. We feel there could be some top Herd Bull prospects in this sire group. 14 sons sell.

- 4119 is a son of 2239 that was raised here on the ranch. He has been our mainstay "Herd Sire" as his sons and daughters perform exceptionally well in our program. His sons in this offering are long topped, thick quartered, with loads of eye appeal. He adds pigment and red color to most of his offspring. His daughters in production are super feminine with excellent udders. 4119 has one of the top yearling EPDs in the breed as well as a top CHB Index. 4119 is also a trait leader in six categories. We purchased an interest in 4119 back from Scott Katus and used him for natural service in our program. 9 sons sell.

## THE BALD-FACED TRUTH ABOUT HEREFORD GENETICS

It's obvious – Hereford-sired calves deliver a \$51 increase in net profit per cow, per year.\* Hereford genetics bring legendary hybrid vigor, improved fertility, feed efficiency and easy-handling docility to your program. Read the research, and see why Hereford heterosis pays off, at [Hereford.org/genetics](https://hereford.org/genetics).

\*Compared to Angus-sired calves. Source: Daley, David A. and Earley, Sean P. Impacts of Crossbreeding on Profitability in Vertically Coordinated Beef Industry Marketing Systems. American Hereford Association. Retrieved from <https://hereford.org/wp-content/uploads/2017/02/HarrisHeterosisReport.pdf>. 57100-B07

## 4111 x 505 Mating

- Sale Weights: Lot 1: 1,730; Lot 2: Scurred, 1,750; Lot 3: 1,900; Lot 4: 1,875. Lot 5: Scurred, 1,740.
- This is a top set of ET bulls by an 8Y daughter that we feel was the best Homegrown daughter that we ever raised. She is super feminine with a nice neat udder. She was moved into our ET program at a young age because of her moderate frame, structure, style and balance. This mating to 4111 has been everything we hoped for in that they are stout made, big butted with loads of performance and eye appeal. Their sire 4111 was a top selling bull in 2016 going to Sommers Herefords in Wyoming. We retained an interest in 4111 and have used him with great success in our ET program. Take a look at these flush brothers and we feel you will agree that they are the right kind for today's industry.

### 6038 x 247 Mating

- Sale Weights: Lot 6: 1,875; Lot 7: 1,750; Lot 8: 1,650
- This group of ET bulls is sired by BB 102 Britisher 6038. We purchased a semen package on this bull from BB Cattle Co. in Connell Washington. He is moderate framed, thick quartered and very correct in his structure. He also adds pigment to most of his offspring. The mating we used here was to our very best Sensation daughter. She has done an excellent job in our program producing 43 calves with sons selling into five states. This set of bulls are moderate in their frame, correct made and should promote calving ease. We have retained a set of bulls from this flush to use on heifers in our program and are confident that they will do a super job.

### 6038 X 2224

- Lot 9: 1,550; Lot 10: 1,600; Lot 11: 1,682; Lot 12: 1,600
- Here is another mating by 6038 and another top female in our program. Their dam 2224 is a daughter of 6238 that has done a super job for us as well as Merle Wyatt in Canada. 2224 is neat uddered, moderate framed and super feminine. She has produced 30 calves in our program with sons selling into 3 states. These bulls too are moderate framed, stout made and correct in their structure. Most of them are pigmented as well. We are pleased with this set of bulls and feel you will be equally as impressed.

## 613 x 1192 and 613 x 7333 Matings

- Sale Weights: Lot 13: 1,650; Lot 14: 1,740
- Here are two sons by SR Diablo 613A They are represented by two females that have been outstanding in our program. The Diablo sons are long bodied, thick made and continue to push down the scale at every stage of data collection. They are large ribbed, and should add carcass quality to their offspring. 7333 was 14 years old when we took her out of production and still had the look and udder quality of a young female. 1192 also has a picture perfect udder and has produced well with every mating we have selected for her.

## 4111 x 8102 Mating

- Sale Weights: Lot 15: 1,600; Lot 16: 1,756
- This mating of 4111 and 8102 also surfaces with one of the best females we have ever raised. She produced 26 calves in our program and had a 110.4 WR on her natural calves. 8102 produced two Herd Sires for our program in Frontier and MH 2239 Advance 4210. She also has sons that sold in four states over the years. We are pleased with this set of bulls in that they are long bodied and deep ribbed and have one of the top CHB Indexes in this offering. They are also all red necked and solid marked.

# Understanding Hereford EPDs

The American Hereford Association (AHA) currently produces expected progeny differences (EPDs) for 17 traits and calculates three profit (\$) indexes. AHA's genetic evaluation makes use of a Marker Effects Model that allows the calculation of EPDs by incorporating the pedigree, phenotypic and genomic profile of an animal. Animals that have a genomic profile will be denoted with a GE-EPD logo.

The current suite of Hereford EPDs and \$ indexes includes:

## Calving Ease — Direct (CE)

CE EPD is based on calving ease scores and birth weights and is measured on a percentage. CE EPD indicates the influence of the sire on calving ease in females calving at 2 years of age. For example, if sire A has a CE EPD of 6 and sire B has a CE EPD of -2, then you would expect on average if comparably mated, sire A's calves would be born with an 8% more likely chance of being unassisted when compared to sire B's calves.

## Birth Weight (BW)

BW EPD is an indicator trait for calving ease and is measured in pounds. For example, if sire A has a BW EPD of 3.6 and sire B has a BW EPD of 0.6, then you would expect on average if comparably mated, sire A's calves would come 3 lb. heavier at birth when compared to sire B's calves. Larger BW EPDs usually, but not always, indicate more calving difficulty. The figure in parentheses found after each EPD is an accuracy value or reliability of the EPD.

## Weaning Weight (WW)

WW EPD is an estimate of pre-weaning growth that is measured in pounds. For example, if sire A has a WW EPD of 60 and sire B has a WW EPD of 40, then you would expect on average if comparably mated, sire A's calves would weigh 20 lb. heavier at weaning when compared to sire B's calves.

## Yearling Weight (YW)

YW EPD is an estimate of post-weaning growth that is measured in pounds. For example, if sire A has a YW EPD of 100 and sire B has a YW EPD of 70, then you would expect on average if comparably mated, sire A's calves would weigh 30 lb. heavier at a year of age when compared to sire B's calves.

## Dry Matter Intake (DMI)

The Dry Matter Intake EPD predicts the daily consumption of pounds of feed. For example, if sire A has a DMI EPD of 1.1 and sire B has a DMI EPD of 0.1, you would expect sire B's progeny, if comparably mated, to consume on average 1 pound of feed less per day.

## Scrotal Circumference (SC)

Measured in centimeters and adjusted to 365 days of age, SC EPD is the best estimate of fertility. It is related to the bull's own semen quantity and quality, and is also associated with age at puberty of sons and daughters. Larger SC EPDs suggest younger age at puberty. Yearling sons of a sire with a .7 SC EPD should have yearling scrotal circumference measurements that average 0.7 centimeters (cm) larger than progeny by a bull with an EPD of 0.0 cm.

## Sustained Cow Fertility (SCF)

The AHA's new Sustained Cow Fertility EPD (SCF) is a prediction of a cow's ability

to continue to calve from three years of age through twelve years of age, given she calved as a two-year-old. The EPD is expressed as a deviation in the proportion of the ten-possible calving's to twelve years old expressed as a probability. For example, the daughters of a bull with a 30 EPD would have the genetic potential to have one more calf by age twelve than the daughters from a bull with a 20 EPD. In other words, the daughters from the 30 EPD bull would have a 10% greater probability of having one more calf than the bull with a 20 EPD. This is equivalent to saying that the daughters are 10% more likely to remain in the herd to age 12.

## Maternal Milk (MM)

The milking ability of a sire's daughters is expressed in pounds of calf weaned. It predicts the difference in average weaning weights of sires' daughters' progeny due to milking ability. Daughters of the sire with a +14 MM EPD should produce progeny with 205-day weights averaging 24 lb. more (as a result of greater milk production) than daughters of a bull with a MM EPD of -10 lb. (14 minus -10.0 = 24 lb.). This difference in weaning weight is due to total milk production during the entire lactation.

## Maternal Milk & Growth (M&G)

Maternal Milk & Growth reflects what the sire is expected to transmit to his daughters for a combination of growth genetics through weaning and genetics for milking ability. It is an estimate of daughters' progeny weaning weight. A bull with a 29 lb. M&G EPD should sire daughters with progeny weaning weights averaging 19 lb. heavier than progeny of a bull's daughters with a M&G EPD of 10 lb. (29 minus 10 = 19 lb.). It is equal to one-half the sire's weaning weight EPD, plus all of his MM EPD. No accuracy is associated with this since it is simply a mathematical combination of two other EPDs. It is sometimes referred to as "total maternal" or "combined maternal."

## Maternal Calving Ease (MCE)

MCE EPD predicts how easily a sire's daughters will calve at 2 years of age and is measured on a percentage. For example, if sire A has a MCE EPD of 7 and sire B has a CE EPD of -3, then you would expect on average if comparably mated, sire A's daughters would calve with a 10% more likely chance of being unassisted when compared to sire B's daughters.

## Mature Cow Weight (MCW)

The MCW EPD was designed to help breeders select sires that will either increase or decrease mature size of cows in the herd. The trait was developed after years of cow weight data collection and the EPD relates directly to the maintenance requirements of a cow herd. For example, if sire A has a MCW EPD of 100 and sire B has an EPD of 85, then you would expect the females of sire A, if mated to similar cows, to be 15 lb. heavier at mature size.

## Udder suspension (UDDR)

UDDR EPDs are reported on a 9 (very tight) to 1 (very pendulous) scoring scale. Differences in sire EPDs predict the difference expected in the sires' daughters' udder characteristics when managed in the same environment. For example, if sire A has a UDDR EPD of 0.4, and sire B has a UDDR EPD of -0.1, the difference

in the values is 0.5, or one-half of a score. If daughters of sires A and B are raised and managed in the same environment, you would expect half a score better udder suspension in daughters of sire A, compared to sire B.

## Teat size (TEAT)

TEAT EPDs are reported on a 9 (very small) to 1 (very large, balloon shaped) scoring scale. Differences in sire EPDs predict the difference expected in the sires' daughters' udder characteristics when managed in the same environment. For example, if sire A has a teat size EPD of 0.4, and sire B has a teat size EPD of -0.1, the difference in the values is 0.5, or one-half of a score. If daughters of sires A and B are raised and managed in the same environment, you would expect half a score smaller teat size in daughters of sire A, compared to sire B.

## Carcass Weight (CW)

Carcass weight is a beneficial trait when considering the impact that pounds have relative to end product value. At the same age constant endpoint, sires with higher values for carcass weight will add more pounds of hot carcass weight compared to sires with lower values for carcass weight. For example, if sire A has a CW EPD of 84 and sire B has a CW EPD 64, then you would expect the progeny of sire A, if harvested at the same age constant endpoint, to have a 20-lb. advantage in terms of hot carcass weight.

## Rib Fat (FAT)

The FAT EPD reflects differences in adjusted 365-day, 12th-rib fat thickness based on carcass measurements of harvested cattle. Sires with low, or negative FAT EPDs are expected to produce leaner progeny than sires with higher EPDs. Ultrasound measures are also incorporated into this trait and have been shown to be highly correlated with the performance of slaughter progeny. All data is expressed on a carcass scale.

## Ribeye Area (REA)

REA EPDs reflect differences in an adjusted 365-day ribeye area measurement based on carcass measurements of harvested cattle. Sires with relatively higher REA EPDs are expected to produce better-muscled and higher percentage yielding slaughter progeny than will sires with lower REA EPDs. Ultrasound measurements are also incorporated into this trait and have been shown to be highly correlated with the performance of slaughter progeny. All data is expressed on a carcass scale.

## Marbling (MARB)

MARB EPDs reflect differences in an adjusted 365-day marbling score (intramuscular fat, IMF) based on carcass measurements of harvested cattle. Breeding cattle with higher MARB EPDs should produce slaughter progeny with a higher degree of IMF and therefore higher quality grades. Ultrasound measurements are also incorporated into this trait and have been shown to be highly correlated with the performance of slaughter progeny. All data is expressed on a carcass scale.

## Baldie Maternal Index (BMS)

The Baldie Maternal Index is a maternally focused index that is based on a production system that uses Hereford x Angus cross cows. Progeny of these cows are

directed towards Certified Hereford Beef. This index has significant weight on Sustained Cow Fertility, which predicts fertility and longevity of females. There is a slightly positive weight on Weaning Weight, Mature Cow Weight and Milk which accounts for enough growth but ensures females do not increase inputs. There is some negative emphasis on Dry Matter Intake, but a positive weighting on Carcass Weight which is anticipated to provide profitability from finishing of non-replacement females and castrated males. Marbling and Rib-eye Area are also positively weighted to keep the harvested progeny successful for CHB. This index is geared to identify Hereford bulls that will be profitable when used in a rotational cross with mature commercial Angus cows.

## Brahman Influence Index (BII\$)

The Brahman Influence Index is a maternally focused index that is based on a production system that uses Brahman x Hereford cross cows. Progeny of these cows are directed towards a commodity beef market since Certified Hereford Beef does not accept Brahman influenced cattle. This index has significant weight on Sustained Cow Fertility, which predicts fertility and longevity of females. There is a slightly positive weight on Weaning Weight, Mature Cow Weight and Milk which accounts for enough growth but ensures females do not increase inputs. There is some negative emphasis on Dry Matter Intake, but a positive weighting on Carcass Weight which is anticipated to provide profitability in finishing non-replacement females and castrated males. Marbling and Rib-eye Area are also positively weighted to keep harvested progeny successful for a variety of commodity based programs. This index targets producers that use Hereford bulls on Brahman influenced cows.

## Certified Hereford Beef Index (CHBS)

The Certified Hereford Beef Index is a terminal sire index that is built on a production system where Hereford bulls are mated to mature commercial Angus cows and all progeny will be targeted for Certified Hereford Beef after the finishing phase. This index has significant weight on Carcass Weight to ensure profit on the rail. As well there is a positive weighting for Average Daily Gain along with a negative weighting on Dry Matter Intake to ensure efficient pounds of growth in the finishing phase. Keep in mind, this production system takes advantage of complimentary breeding with the commercial Angus cow. Although Marbling is weighted positively in this index, a positive weighting for Rib-eye Area and a negative weighting for Back Fat are a greater priority in this index to allow for optimum end-product merit. This is the only index that has no emphasis on fertility. Remember that no replacement heifers are being retained.

The breed averages are as follows:

| BW  | WW | YW | MM | M&G | BMS | CHBS |
|-----|----|----|----|-----|-----|------|
| 2.8 | 53 | 86 | 25 | 52  | 352 | 113  |
