REMINISCE ANGUS

*That's a measurable difference
in Angus genetics.*

LEADING THE INDUSTRY BACK TO THE FUTURE

**With our “Extreme Middle” approach
to genetic solutions.**

The Angus breed has been chasing maximum performance for 40 years. The tried and true Angus cow has been challenged to maintain her reputation as the world's greatest female, while taking on as much weight as possible, producing more milk than she is capable of, to produce a calf that is genetically even bigger than she is. She has done pretty well, as long as the size of her feed bucket has grown with her by 40%. This makes her easy on the eyes for the average viewer, but the feed cost of the pregnant ones is enormous and a subject that most don't like talking about. It's hard to upgrade equipment when the extra dollars are going to buy extra feed. That extra feed isn't going toward extra performance for premium returns, it is simply going toward maintenance and that isn't paying dividends. Bankers across the country are lending money for the added cost of maintenance, which doesn't pay the interest.

Reminisce Angus cows are run tougher than any of our customers. Ask them.

Our first calvers weigh 975 lbs., fleshy. Our mature cows weigh 1,250 lbs. with an average Yearling EPD of just 87. Angus cattle are big enough.

How good are your cattle?

Bragging rights on performance begin and end on the rail. On that day you will know how healthy they were, how well they gained, how well they converted, and how well they will taste to a consumer that doesn't know you. We all sell our cattle by the pound and on that day, you will be paid accordingly. Do you know how good your cattle are? Reminisce Angus customers do. They have the data. They have the bragging rights.

Our cull calves and customer calves average annually 3.75 - 4.25 ADG, feed conversion at 5.52, and finish at 16 months of age at 1,375 - 1,400 lbs., grading 95% Choice and better, 50% CAB and Prime, 35-40% YG 2's, and fewer than 20% YG 4's. Our customer yearlings average 4.5 - 5.20 ADG, 5.0 - 5.5 feed conversion, finishing at 1,500 - 1,600 lbs., with the same excellent carcass value.

Reminisce Angus doesn't play the EPD number game to entice new customers. Those numbers are fickle and change too often for anyone to make long-term decisions. We play the data game. Those numbers are real, and our customers benefit directly from them.

REMINISCE ANGUS

Reminisce Cows

Cow herd performance starts with measuring structural soundness and disposition. If these 2 traits aren't in order, it doesn't matter how fertile she is or how big a calf she can raise.

Reminisce Bulls

Born and raised in altitudes above 7,000 feet. Developed on a 41 mega cal ration, summered in big sagebrush pastures to learn to travel in big county.

Large Sire Groups

You will notice we have used the same sires in volume for 3-5 years. We breed large sire groups of females. This allows our customers to build large uniform groups of females in their herds. This makes for large uniform groups at shipping, consistent feeding results, and very uniform carcass data.

*The measurable
difference in
American presidents!*

DELIVERY - FREE delivery In-State or up to 500 miles. We will be happy to assist you in making delivery arrangements. Delivery Discount - Haul your own, \$100 per bull within three days of the sale date, to be deducted at the time of purchase. Please make all qualifying FREE delivery arrangements at time of purchase.

BOARD - No charge until March 31st, 2020. Effective April 1st, 2019, all feed charges will become the responsibility of the purchaser, a current cost of \$75 per month will be added to the purchase price. Please make arrangements for Board at time of purchase.

DISCOUNTS - Available only on individual lots \$4000 or above

Volume Purchases: 5 to 9 Bulls - 5% Discount on qualifying bulls
10+ Bulls - 10% Discount on qualifying bulls

BIDS/SIGHT UNSEEN GUARANTEE - If you are unable to attend the sale, please call us, and we will assist you with your order - We offer a sight unseen satisfaction guarantee; we enjoy and pride ourselves on providing you with the best possible bull to fit your program needs, however, If you don't like 'Em when you see 'Em, you don't own 'Em.

ANNOUNCEMENTS - A supplemental update sheet will be available on sale day. Announcements from the block take precedent over information contained in this catalog. Reminisce Angus bulls are bred and developed for the commercial cattle industry, as well these bulls sell with registration papers. Reminisce Angus will retain a 1/2 semen revenue sharing interest. Full possession and full salvage value sells with all bulls. Complimentary Pre-sale lunch at noon - CAB New York Strip sandwiches.

TERMS AND CONDITIONS - All bulls sell according to the standard terms and conditions of the American Angus Association. Terms are cash.

CONDITIONING: Reminisce Angus bulls are bred and raised in Beaverhead County. They have been maintained on a complete health program starting at birth, preweaning, weaning and yearling. We have done extensive BVD testing at Reminisce Angus—all tests have been negative for PI's (persistently infected carriers). All bulls have been developed and maintained on a 41 MegaCal/lb gain high roughage ration at the Big West Management cattle feeding facility in Dillon. Fertility testing, breeding soundness exam, and scrotal measurements have been completed. The bulls may be viewed at Big West Management's cattle feeding facility.

WARRANTY— The seller guarantees that all bulls have passed a breeding and soundness exam. Insurance is available, please review the Coverage Summary of Bull Mortality and Loss of Use statement. All bulls are guaranteed for the first breeding season (60-day period following the first turnout) due to genetic and/or structural defects. Please feel free to contact us about any and all injuries. We take care of our customers. Seller will provide a suitable replacement if available, or purchaser will receive full credit, minus the salvage value of the original purchase price towards the purchase of a bull in the next Reminisce Angus sale. We would like to encourage all buyers to consider purchasing MORTALITY insurance offered the day of the sale. Please feel free to contact us at any time, prior to September 1st, 2020.

The Measurable Difference in Angus Genetics!

Good Morning Friends!

On this gorgeous 22nd day of January 2020, I write this letter to you with more hope and enthusiasm for our industry than I have had for a long time. It's been three tough, stagnant years in the cow/calf sector and it's time for a change.

The three major trade deals, made with the EU, Japan and China, will have a REAL effect on our 2020 market. We have put in our catalog, the USDA fact sheets from these three deals. The time line is the measurable difference in these deals. Over the past 40 years, most trade deals take ten years to fully implement and sunset the same year, rendering them a pair of 4's in a card deal. These new deals will see motion in 2020. The USMCA deal will virtually remain status quo, however, it is good to clear the air with two of our biggest trading partners. If other industries do well with any of these deals, consumers will have more disposable income to spend on food. We have to convince them to buy beef!

It is important to buy proven, predictable, repeatable genetics. We have been developing a tight, high, bell curve in this herd for over 15 years, by aiming at the "Extreme Middle" for genetic solutions. Over 80% of our bulls fall within the high walls of this bell curve. By being disciplined in our actions, we do have something for everyone. On one end of the bell curve, there are some bigger framed bulls; and on the other end, there are some more moderate bulls; and we have customers that like these outliers. BUT in the middle there are bulls, that both these customers can find to suit their needs, that aren't too framey or too moderate to fill their order.

Reminisce Angus bulls are genetically bred to express as much muscle, volume and performance as we can breed into them, sired by bulls with less than 100 for yearling EPD. They are consistently bred for marbling and ribeye together. Structural soundness and maternal traits are standard procedure.

On behalf of our entire family and Reminisce crew; we are looking forward to seeing you on sale day! We'll put the best beef we can buy on a plate for you for lunch, we invite you to enjoy a Gorgeous toddy and a cigar afterwards.

Sincerely,

*Bryan, Marcia
and the crew*

**ECONOMIC AND TRADE AGREEMENT BETWEEN
THE UNITED STATES OF AMERICA AND
THE PEOPLE'S REPUBLIC OF CHINA
FACT SHEET**

MEAT, POULTRY, AND LIVE BREEDING CATTLE

The Phase One economic and trade agreement signed by the United States and China on January 15, 2020, will provide U.S. exporters of beef, pork, and poultry, as well as live breeding cattle with expanded access to China's rapidly growing market.

Key Achievements:

China has agreed to implement the following actions:

BEEF

- Remove age restrictions for U.S. beef and beef products upon completing a risk assessment;
- Expand the allowable product scope for U.S. beef and processed beef products to more closely align with those products that the United States allows for domestic consumption and export;
- Recognize the U.S. beef and beef products' traceability system that the United States already has in place, which exceeds World Organization for Animal Health (OIE) guidelines for bovine spongiform encephalopathy; and
- Adopt internationally-accepted maximum residue levels for three widely-used veterinary drugs (zeranol, trenbolone acetate, and melangesterol acetate).

(406) 660-1214 Silas**

BUYERS SPECIAL NOTE

If you are looking at our catalog for the first time, we want to take this opportunity to share our calving season and bull development program. We calve our cows in June and early July. The bulls are weaned in December, then, performance tested on a 41 mega cal. Ration for 140 days. After ultra-sounding at 12 months of age, we ship them back to high mountain (7,000-7,500') dry summer pasture for 4 months. They are put back on a high roughage ration through sale day.

These bulls on average are only about 3 months old before the grass turns yellow and loses much of its nutritional value. They don't have much of an opportunity to graze on good lush green grass. The cows as well have to produce milk on old dry feed with only protein blocks to supplement them.

Without feeding them high levels of grain, the calves do not post weaning and yearling weights of traditional yearling bulls. However, the additional 8 months of age allow us to develop them for longevity, providing a product with more ROI. We continue to performance test all of our cull calves and several groups of customer calves to ensure we are producing top performance-bred genetics.

American Angus Association / Breed Average EPD & Values / Spring 2020

	CED	BW	WW	YW	RADG	DMI	Milk	Marb	RE	\$M	\$W	\$B
AAA Non-Parent Bulls	+6	+1.3	+54	+96	+.24	+.81	+25	+.54	+.55	+56	+54	+129
Reminisce Sale Lots Average	+7	+.3	+49	+85	+.19	+.45	+28	+.54	+.45	+57	+58	+110

***DNA Testing** - The American Angus Association continues its efforts to improve the breed by identifying and vetting genetic defects within it; as a result, the breed will be stronger and continue to lead the industry in genetic identification for specific traits. This allows its/our customers to move forward at a faster more aggressive pace. With this said, as this process continues to unfold and correct itself, it is very difficult to identify all carriers of all defects at once as new animals continue to be tested. We at Reminisce Angus have done extensive testing on all potential carrier cattle that have come up over the past 5 years. We guarantee our cattle against any genetic defect as we always have. We feel these defects are a minor issue that is being aggressively taken care of by the American Angus association; therefore, it will have very little impact if any on the breed as a whole and to our customers.

American Angus Association—EPD and \$Value Definitions

Each bull listed in this report is comparable to every other bull in the database. The analysis takes into account only the differences expressed in each herd in which the bulls were used. For example, bull A has a weaning EPD of +30lb. and bull B has a weaning EPD of +20lb. If you randomly mate these bulls in your herd, you could expect bull A's calves to weigh, on average, 10 lb. more at weaning than bull B's progeny ($30 - 20 = 10$).

Expected Progeny Difference (EPD), is the prediction of how future progeny of each animal are expected to perform relative to the progeny of other animals listed in the database. EPD's are expressed in units of measure for the trait, plus or minus.

\$Value Indexes, are multi-trait selection indexes, expressed in dollars per head, to assist beef producers by adding simplicity to genetic selection decisions. The \$Value is an estimate of how future progeny of each sire are expected to perform, on average, compared to progeny of other sires in the database if the sires were randomly mated to cows and if calves were exposed to the same environment.

RM Baron 5811, a young reference sire, is a result of executing our slogans. He is the "Extreme Middle" by every measurement. Baron is the most moderate herd bull we have ever used, measuring up to most 4 year old cows in our herd, yet his ability to transmit all traits across the board is unmatched and like nothing we have ever seen before. His daughters are deep and soggy in the britches, with a nice clean angular fronts. His sons are massive, deep and long. All this comes with moderate calving ease and industry leading feed efficiency and gain. Baron's success must go to his dam, the great Queen 9361 cow; also the dam of RM Big West 2336 and RM Sequel 8535. He is an excellent cross to all our other sires.

We have used Combination as our main outcross bull for 4 years now and we are very pleased with the results. Our herd bull, RM Baron 5811 would be the greatest of these results. Combinations are consistent, square, easy fleshing cattle with tremendous feed efficiency. His daughters are great mothers with very nice square, small teated udders. He will moderate milk in your herd in one generation, if you need to. As you can see by his EPDs, he fits right into the "Extreme Middle" of this herd. He has been an excellent cross on our 2 Trend daughters. That combination will be highly sought after for years to come, and we will continue to make more like them in volume.

I tried to hide these embryos somewhere in the sale order, but it was impossible. So for the 3rd year in a row our lead off Lot will be full siblings to the last two years. However, this year there are 5 of them!

This combination of RM Baron 5811 and RM Erica 9368 is a chart topper and would be a sale topper anywhere in the country for any trait. Baron, as many of you know, is a son of our great foundation cow GG Queen 9361. Her ability to produce maximum performance and feed efficiency in a moderate package with tremendous red meat yield and marbling says it all. The maternal traits and fertility are well documented. We didn't start flushing her until she was 14 years old. Her last flush sons sold to the Ashcraft Ranch and the Valley Garden Ranch. They have both had great success with them.

Hunt Angus purchased Baron in that same sale, he has become one of Dean's favorite herd sires. Baron is the most moderate bull we have ever used, yet his progeny are tremendous in stature. His daughters have great udders like 9361, and they are broody.

As usual, we will sell them together - Buy 1 or buy them all for the same money, but..... don't go home without one!

"Well Bryan, I have to say the Reminisce bulls did a good job breeding this year. Our heifers were bred up 84% in 30 days and it's even better than that! The ultrasound showed that the bred ones were all bred in the first 21 days."

Lot 7 is the result of listening to our customers for 35 years. This bull rose to the top of the toughest sale order we have ever had to make. He stems from the most prolific cow family we have. His grand dam produced the Lot 23 bull in our 2017 sale; selling to Maverick Cattle Company. This bull is long and wide with that classic Reminisce style. He sells with an impenetrable set of performance numbers and EPD's.

This young 7 year old dam is making a name for herself at Reminisce Angus. She produces big stout bulls like these and scoffs at a foot of snow when winter grazing. These Natural 1812 daughters are tough and broody. There are a lot of them being represented in this sale.

"On the 2Trend daughters, I have 3 generations of 2Trend daughters and for the last two years, they have bred up 100% in a 45 day breeding. They separate themselves from any other sire group by their temperament, feet, mature size, bag structure, and the weight they bring to the scale. These are the type of daughters that keep commercial producers like myself in business."

Casey Fitzsimmons

Let's follow up that great story with the same cow family. This great bull's dam is rapidly making her way to the Lot 23 stature. We sold a bull in the 2019 sale to Bradley Livestock by this cow's first daughter. This is the best follow-up bull to Lot 23 we have offered. We attribute so much of this performance and longevity success to the great Queen 9361 genetics far back in this pedigree. Long live the Queen!

It takes a special combination to make Lot 23. This bull must be solid in physical stature. His numbers must be sought after, his dam must have producing granddaughters. All the boxes are checked with this one!

This year we toast to another great Reminisce cow, that carved out a living in one of the toughest, if not the toughest seedstock laboratories in the business. REM Lass 7325 produced the Lot 23 as a 12 year old cow. She posts 10 calves @ BW 98, WW 99, YW 102; 8 calves @ IMF 106, RE 103 - these are extreme middle indexes with premium cut ability and taste in the end product.

Along with his solid numbers and physical stature, RM Combination 8578 meets the threshold of 1.20 for red meat yield. This is the type of bull that built ranches 40 years ago. He's the kind that will build them today.

This bull matches the impeccable quality of the CATTLE BARON CIGAR!

We are a small cigar company; however, as people find our cigars, they are ordering them from all over the country because of their incredible quality! The parallels between these two industries are very similar, so LIGHT UP a Cattle Baron cigar when this bull comes into the ring and join us in celebrating this year's LOT 23 bull; you'll like him!

Lots 31, 32, 33:

Here's another powerful set of Baron sons by the dam of last year's Lot 23. This maternal grand dam has produced our Lot 23 twice before. Her maternal sister had the Lot 2 bull the last two years. REM Lass 1358 will have several more embryos in next year's sale.

That's how much we think of her! Her great Combination 0188 bull sold in last year's sale to the Hollow Top Ranch. This genetic line is the most consistent in our herd for producing positive marbling and ribeye. They are perfect phenotype cattle as well.

We buried this good bull in the middle of the sale. He could have been Lot 1. His donor dam continues to do a great job for us. Look at his birth date; after flushing her, we bred her and put her back in the herd. She consistently produces high marbling, easy fleshing sons. Remember, marbling and longevity run together.

You gotta love this young cow, turning 10 and pumping out good solid bulls for you to build a young cow herd. Easy fleshing, perfect udder, and her 14 year old donor dam has a great bull in this year's sale as Lot 54.

This is an outcross bull in this herd. Look at him on sale day and see how moderate and SQUARE he is. We have been selling super bulls by this great cow for a long time. She is a real gem. We flushed her as a 14 year old cow. She has granddaughters producing now to carry on her great legacy.

Holy smokes! Bradley Livestock knew what they wanted in this bull's sire, and he is producing accordingly. His daughters are great, and his grand dam has produced the Lot 1 bull for three years in a row.

"I have a large retained ownership for a customer who uses Bryan's genetics and has fed his cattle with me for 25 years. Here are the reasons I consider these some of the best performing cattle I finish:

- ◆ 90+% Choice, 20% Prime
- ◆ Minimal health issues
- ◆ Cattle are feed efficient if the market wants us to make them 1600 lbs
- ◆ They grid exceptionally well.

Bryan has been able to get ribeye area growth and keep the quality grade."

Tom Jones, High Plains Feedlot
Montezuma, Kansas

This is another full brother by our T019 cow, she raised this high indexing bull at 13 year of age. This 134 IMF indexing bull will draw a lot of attention on sale day. Last year's brother went to Spur Cattle Co., a long time buyer of high marbling bulls. They did have more open cows than they liked, in their 16-19 year old cows last year. That's a measurable difference in Angus genetics. Again, marbling and fertility parallel in this herd. Ask RV Merrill!

Here's a preview of coming events in 2021. Lot 120 is a younger calf, because we were flushing his dam extensively. You might recognize her as the dam to our high selling Lot 23 bull in the 2019 sale. We knew very little about his sire when we flushed her to Cortachy Boy, pronounced Court-a-gee-boy. We flushed all of our donors and AI'd 200 cows to this outcross sire. This Lot might be the best buy, because he is younger. They will be highly sought after next year. He gets wider every day and his Gorgeous dam shows in his phenotype. This is by any respects a true American outcross.

"Every bull in this sale is worthy of a comment. Bulls that don't add value, get banded and fed. We don't pay attention to how much money we spend on embryo work and artificial insemination. A cull is a cull and we treat them all the same."

Bryan Mussard, Reminisce Angus
