

ROONEY ANGUS RANCH

ANNUAL SPRING BULL SALE
SATURDAY | MARCH 7, 2020 | 1 P.M. CST

ROONEY ANGUS RANCH
SALE FACILITY
DESDEMONA, TX

Dear Cattlemen,

On behalf of the entire Rooney Angus Ranch team, we would like to invite you to our Inaugural Spring Bull Sale at our new sale facility located in Desdemona, TX on Saturday, March 7th, 2020.

We are very passionate about this business. Our goal is to supply genetics to the backbone of this industry, YOU, the commercial cattleman. We don't take lightly the responsibility of producing seedstock for our customers that enhance sustainability of a way of life we all love.

Breeding profitable cattle requires an in-depth understanding of a complex supply chain from seedstock supplier to retailer. It takes an unwavering focus to ignore the noise and have the discipline to apply the available science and technology to breed better beef.

With that in mind, our bulls are balanced genetically to help capture value at any marketing level whether it is at weaning, yearling or retained ownership in the feedyard. The bulls offered in this sale are superior in calving ease, rapid early growth, performance, phenotype, fleshing ability and carcass quality.

Sale bulls will be available for your evaluation at the ranch anytime. Rooney Angus Ranch is focused on raising herd bulls and we look forward to what the future holds.

With much appreciation,

The Rooney & Chandler Families

Steve & Karen Rooney

Brady & Micah Chandler

Annual Spring Bull Sale
Saturday, March 7, 2020, 1 p.m. (CST)
Rooney Angus Ranch Sale Facility, 7440 TX-16, Desdemona, TX 76445

AUCTIONEER

Col. Jim Birdwell
580-695-2352

COMPARISON OF RAR BULLS TO THE BREED.

Expected Progeny Difference (EPD), is the prediction of how future progeny of each bull is expected to perform relative to the progeny of other bulls listed in the database. EPDs are expressed in pounds, square inches, or centimeters (depending on the trait), plus or minus.

\$Value indexes are multi-trait selection indexes expressed in dollars per head, to assist beef producers by adding simplicity to genetic selection decisions. The \$Value is an estimate of how future progeny of each bull is expected to perform, on average, compared to progeny of other bulls in the database if the bulls were randomly mated to cows and if calves were exposed to the same environment.

The first of many K216 sons you will see in our sale. His sire has proven to be a breeding bull that sires long bodied, big middled, gentle cattle that can add pounds with extra value. His progeny was the biggest weaning group and have not slowed down. Out of a good uddered, attractive Journey daughter that is out of a full sister to VAR Legend. #1 in this sale for RE EPD.

Another stout Enhance son that is moderate and thick. Dam is a big hipped, stellar producing Discovery daughter.

Rooney Angus Ranch Guarantee

All the bulls will sell with the Rooney Angus Ranch Guarantee. If a bull is injured at anytime during the first breeding season (90 days from turnout) so as to make them functionally infertile, you will receive 100% of the purchase value (minus the salvage value) or a replacement bull of equal quality and value if one is available. In short, if you're not happy, we're not happy and we will make it right.

Love having the kids right here learning daily how to be around cattle! - Chauncey Chandler

Created by Angus Genetics Inc. (AGI) and powered by Neogen GeneSeek, our sale cattle have been tested with the first DNA profile designed specifically for Angus cattle, Angus GSSM.

Each marker is intentionally chosen from the Angus genome to drive the Angus breed into the future. It offers maximum accuracy for genomically enhanced EPDs at great value. Testing heifer and bull calves ultimately allows you to reap the benefits of faster genetic gain in your commercial herd. With Angus GS, it's all about you, our customer.

RED CHAIN FEEDS

THE BRAND TO TRUST.

Since 1969, Gorman Milling Company has proudly supplied Texas cattle raisers with quality mixed feeds, pellets, cubes, and commodities under the Red Chain Feeds brand name. Whether you own a couple of cows or a couple thousand, we remain dedicated to providing you with the products and expertise needed to help your operation flourish.

REDCHAINFEEDS.COM

GORMAN MILLING COMPANY, INC
Gorman, Texas | (800) 588-2252

Rooney Angus Ranch Marketing Assistance

All of us here at Rooney Angus Ranch are committed to the beef business. It's who we are. We have been involved in every facet of this business from pasture to plate. The experience and knowledge we have gained over the years of feeding and marketing both cattle in the country and on the rail has given us years of insight to better serve you. We stay in constant contact with feeders and industry professionals to track and monitor cattle markets, cost of gain and trade to insure we can better help our customers marketing needs. We encourage you to contact us when you are ready to market your calf crop or sell replacement females so we can assist as a representative or as a potential buyer. Our commitment to you does not end when the bull leaves the ranch.

Heifer Bull - Big time calving ease Monumental son. #1 in this sale for CED, BW and CEM.

Our WI crew keeps our babies warm and dry! Whatever it takes in whatever part of the country you're in!

EXPLANATION OF EPDs

Expected Progeny Difference (EPD), is the prediction of how future progeny of each animal are expected to perform relative to the progeny of other animals listed in the database. EPDs are expressed in units of measure for the trait, plus or minus. Interim EPDs may appear on young animals when their performance has yet to be incorporated into the American Angus Association National Cattle Evaluation (NCE) procedures. This EPD will be preceded by an "I", and may or may not include the animal's own performance record for a particular trait, depending on its availability, appropriate contemporary grouping, or data edits needed for NCE.

GROWTH

Calving Ease Direct (CED), is expressed as a difference in percentage of unassisted births, with a higher value indicating greater calving ease in first-calf heifers. It predicts the average difference in ease with which a sire's calves will be born when he is bred to first-calf heifers.

Birth Weight EPD (BW), expressed in pounds, is a predictor of a sire's ability to transmit birth weight to his progeny compared to that of other sires.

Weaning Weight EPD (WW), expressed in pounds, is a predictor of a sire's ability to transmit weaning growth to his progeny compared to that of other sires.

Yearling Weight EPD (YW), expressed in pounds, is a predictor of a sire's ability to transmit yearling growth to his progeny compared to that of other sires.

Residual Average Daily Gain (RADG), feed efficiency expressed in pounds per day, is a predictor of a sire's genetic ability for post-weaning gain in future progeny compared to that of other sires, given a constant amount of feed consumed.

Dry Matter Intake (DMI), expressed in pounds per day, is a predictor of difference in transmitting ability for feed intake during the post-weaning phase, compared to that of other sires.

Scrotal Circumference EPD (SC), expressed in centimeters, is a predictor of the difference in transmitting ability for scrotal size compared to that of other sires.

Docility (DOC), is expressed as a difference in yearling cattle temperament, with a higher value indicating more favorable docility. It predicts the average difference of progeny from a sire in comparison with another sire's calves.

MATERNAL

Calving Ease Maternal (CEM), is expressed as a difference in percentage of unassisted births with a higher value indicating greater calving ease in first-calf daughters. It predicts the average ease with which a sire's daughters will calve as first-calf heifers when compared to daughters of other sires.

Maternal Milk EPD (Milk), is a predictor of a sire's genetic merit for milk and mothering ability as expressed in his daughters compared to daughters of other sires. In other words, it is that part of a calf's weaning weight attributed to milk and mothering ability.

CARCASS

Carcass Weight EPD (CW), expressed in pounds is a predictor of the differences in hot carcass weight of a sire's progeny compared to progeny of other sires.

Marbling EPD (Marb), expressed as a fraction of the difference in USDA marbling score of a sire's progeny compared to progeny of other sires.

Ribeye Area EPD (RE), expressed in square inches, is a predictor of the difference in ribeye area of a sire's progeny compared to progeny of other sires.

Fat Thickness EPD (Fat), expressed in inches, is a predictor of the differences in external fat thickness at the 12th rib (as measured between the 12th and 13th ribs) of a sire's progeny compared to progeny of other sires.

\$VALUE INDEXES

\$Value indexes, are multi-trait selection indexes to assist beef producers by adding simplicity to genetic selection decisions. \$Values are reported in dollars per head, where a higher value is more favorable. The \$Value is an estimate of how future progeny of each sire are expected to perform, on average, compared to progeny of other sires in the database if the sires were randomly mated to cows and if calves were exposed to the same environment.

Maternal Value (\$M), an index expressed in dollars per head, predicts profitability differences in progeny due to genetics from conception to weaning.

Weaned Calf Value (\$W), an index value expressed in dollars per head, is the expected average difference in future progeny performance for pre-weaning merit. \$W includes both revenue and cost adjustments associated with differences in birth weight, weaning direct growth, maternal milk, and mature cow size.

Beef Value (\$B), an index value expressed in dollars per head, is the expected average difference in future progeny performance for post-weaning and carcass value compared to progeny of other sires.

Combined Value (\$C), an index expressed in dollars per head, includes all traits that make up both \$M and \$B with the objective that commercial producers will replace 20% of their breeding females per year with replacement heifers retained within their own herd.

American Angus Association \$Value Indexes

Dollar value indexes, or **\$Values**, are a tool used to select for several traits at once based on a specific breeding objective. An economic index approach takes into account genetic and economic values as well as the relationships between traits to select for profit.

ANGUS
THE BUSINESS BREED

Maternal Weaned Calf Value (\$M), an index expressed in dollars per head, predicts profitability differences in progeny due to genetics from conception to weaning. \$M is built off of a self-replacing herd model where commercial cattlemen replace 25% of their breeding females in the first generation and 20% in subsequent generations. Remaining cull females and all male progeny are sold as feeder calves. Increased selection pressure on \$M aims to decrease overall mature cow size and improve foot structure and fertility while maintaining weaning weights consistent with today's production.

Weaned Calf Value (\$W), an index expressed in dollars per head, provides the expected difference in future progeny preweaning performance from birth to weaning. \$W assumes that producers retain 20% of their female progeny for replacements and sell the rest of their cull female and male progeny as feeder calves. Over time, increased selection pressure on \$W will increase weaning and maternal milk traits while also continuing to increase mature cow size.

Feedlot Value (\$F), an index expressed in dollars per head, is the expected average difference in future progeny performance for postweaning merit compared to progeny of other sires. The underlying objective assumes commercial producers will retain ownership of cattle through the feedlot phase and sell fed cattle on a carcass weight basis with no considerations of premiums or discounts for quality and yield grade.

Grid Value (\$G), an index expressed in dollars per carcass, is the expected average difference in future progeny performance for carcass grid merit, including quality and yield grade attributes, compared to progeny of other sires.

Beef Value (\$B), an index expressed in dollars per carcass, facilitates simultaneous multi-trait genetic selection for feedlot and carcass merit. \$B represents the expected average differences in the progeny postweaning performance and carcass value compared to progeny of other sires. This index assumes commercial producers wean all male and female progeny, retain ownership of these animals through the feedlot phase and market these animals on a quality-based carcass grid.

Combined Value (\$C), an index expressed in dollars per head, includes all traits that make up both \$M and \$B with the objective that commercial producers will replace 20% of their breeding females per year with replacement heifers retained within their own herd. The remaining cull heifer and steer progeny are then assumed to be sent to the feedlot where the producers retain ownership of those cattle and eventually sell them on a quality-based carcass merit grid.

Top Dollar Angus Feeder Calf Program

Top Dollar Angus is a genetic-certification and marketing company focused exclusively on the top 25 percent of the industry in carcass and growth Angus and Red Angus-influenced feeder cattle. Top Dollar Angus is a program similar to other popular branded-beef programs, except that Top Dollar Angus does its branding in the feeder cattle and calf market.

Qualified herds must have two or more generations of Angus (Black or Red) genetics with growth and carcass traits objectively ranking in the top 25 percent of the breed based on documented historical sire use. DNA evaluation conducted by Zoetis or GeneSeek is another workable method to qualify. Once your cattle have met the necessary requirements, they will be marketed under the Top Dollar Angus brand and logo, and will be promoted aggressively to a large number of feed yards and buyers. In today's market, Top Dollar Angus cattle are seeing premiums ranging from \$30 to \$70 per head above the average market.

Why the premium? Cattle feeders know that Top Dollar Angus cattle perform better and have higher grid-based carcass rewards compared to other cattle. This puts more dollars per head into the cattle feeder's pocket, which can be passed back to the producer in the form of premiums paid above market price.

Jared Wareham,
general manager

Top Dollar Angus helps take the guess work and surprises out of growing and feeding cattle. Feed yards are tired of unpredictable performance and wide-ranging profitability results from group to group on cattle they purchase. Cattle often look the same and have the same colored hides, but are very different genetically. That's why the genetic certification of high-end Angus and Red Angus feeder cattle is here! The industry must differentiate the best Angus and Red Angus genetics from average cattle, and that's what Top Dollar Angus will do for you!

If you have consistently invested in high-performance Angus or Red Angus genetics, Top Dollar Angus will make your cattle stand out from the pack and get you the premiums you deserve. No matter how you market your cattle, our goal is to create more demand and higher prices for your calves.
