DEAR CATTLEMEN AND FRIENDS,

We would like to invite you to join us at the Sandmeier Charolais Ranch on **Friday, March 6, 2020**, for our **Annual Production Sale**.

We invite you to come to the ranch to see this year's offering at your convenience. Please join us prior to the sale for a complimentary lunch beginning at 11:30.

Our predominantly polled cow herd is bred to convert ranch grass and roughage into meat. As we strive to achieve improvement, we use criteria including performance, rib ultrasound, EPD's, structural correctness, and disposition for determining the bulls to be offered.

Recognizing the fact that each breeder selects for different traits, we supply the following information: birth weight, 205-day adj. weight, 365-day adj. weight, rate of gain, current EPDs, ultrasound rib-eye area, ultrasound marbling score. Most of the bulls are in 6 to 7 frame score range.

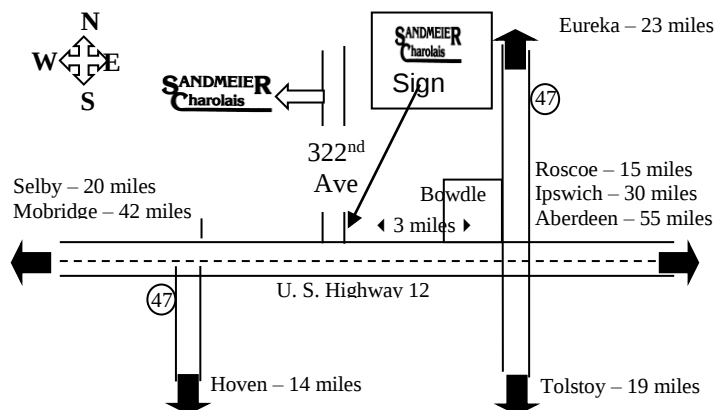

In developing these bulls, none of the bulls receive any individual feeding or pampering. Each bull competes with all of the other bulls in their age group to provide you an honest performance comparison. Feed ration formulated by Cattlecents Consulting, DeWayne Siebrasse, Aberdeen, SD.

If you can't make it to the sale, and would like to make a purchase, we will help you with your purchase in a very honest, professional manner.

We will again offer the live broadcast of the sale over the Internet at www.dvauction.com. If you would like more information concerning this option, please contact us, or check out the web sites.

Hope to see you March 6th at the ranch.

Explanation of EPDs

Birth Weight EPD (BW) The expected difference in average birth weight (pounds) of progeny. Birth weight reflects prenatal growth.

Weaning Weight EPD (WW) The expected difference in average weaning weight of calves. The evaluation reflects the genetic influence on pre-weaning growth rate.

Yearling Weight EPD (YW) The expected difference in average yearling weight of progeny. The evaluation reflects genetic influence on both pre-weaning and post-weaning growth rate.

Maternal Milk EPD (M) The genetic ability of a sire's or dam's daughters to express in pounds of weaning weight in her calves due to her maternal ability through mothering instinct and milk.

Total Maternal EPD (TM) A value to predict the weaning weight performance of calves from an animal's daughters due to genetics for growth and maternal ability. Total Maternal is calculated by adding ½ the WWT EPD to the Maternal Milk EPD.

Terminal Sire Index (TSI) The AICA Terminal Sire Index (TSI) is a formal method of combining Expected Progeny Differences (EPD) – BWT, WWT, YWT, REA, HCW, MARB and FAT – into one single value on which to base selection decisions. The TSI uses estimates of the genetic relationships between traits with an economic default value based on three year rolling USDA data.

The TSI represents a dollar index per terminal progeny produced for a bull in the AICA database, ranking them for profit potential. This dollar index is to be interpreted much like single trait EPD. For example, if Sire A's index is \$191.66 and Sire B's index is \$200.00, then we would expect Sire B's offspring to average \$8.34 more net return (\$200.00 minus \$191.66) than Sire A's offspring.

At this years sale there still might be brownies and lemon bars but after many attempts it has been hard to make them as good as Mildred's. Over the years she has missed very few sales but has made bars for every single one of them. She has done everything to help, from cooking meals, bars, babysitting, and every other role you can imagine, she did them all. You will be missed by us all.
