Annual *Turning Grass Into* *Greenbacks Bull Sale*

April 2, 2024

At the Ranch • Lusk, WY • 1 pm • Lunch at noon
8 miles east on Hwy 20 to Node, then 0.6 miles south on Pfister Rd

Selling: 17 Two-Year-Old Angus Bulls
90 Yearling Angus Bulls - 5 Yearling Hereford Bulls

Featured Sires:

Sitz Accomplishment - S Architect - Yon County Road - GAR Home Town
High Reward - Sitz Spectrum - BJ Surpass - Mandra Big Valley 180
McD Effective 789 - McD Confidence 035

Welcome to our 17th Annual Production Sale

Well, 2023 was the winter from hell, then I topped it off with a stroke in July. I want to take a moment to just say thank you to my daughters. They stepped up, did what they had to do, and they all pulled together to just get it done. When I got home in October, everything was under control. I have been blessed and have pretty much fully recovered; I thank God for that. Many of you prayed, cheered for us, and helped wherever you could. Again, thank you to you all, it was greatly appreciated. I am truly humbled.

We thank you for your interest and consideration of WEBO Bulls. WEBO Angus will absolutely stand behind our cattle; let us know if any issues come up. We will do what is right and will correct any problems to the best of our ability. Our goal is that you'll be happy and satisfied with the results.

As always, we are applying lots of pressure on fertility; it's the number one trait that will keep us all in business. Hardy, maternal cows certainly paid off. They stepped up, took the coldest, most miserable winter in stride, and bred back in good time. Again, they just took it and stayed in pretty good shape proving we are on the right track.

We continue to select for feed efficiency. This year, every bull selling has been efficiency tested and we have added efficiency data & EPDs on sale day. Please read the letter about feed efficiency testing from Dr. Steve Paisley, Director, UW-SAREC. We were late getting the bulls started on testing so the test results from Grow Safe will be available online or on sale day. We keep working to build a cow herd that will stay in shape, produce offspring that will eat less, and not give up a pound of gain in the feedlot. This will help the bulls you get from us stay in shape and influence the efficiency in your cow herd. If our cattle only effectively reduce consumption by 10% or 15% over several years in their offspring, that starts to add up quickly at both the feedlot and the ranch. We strive for this without affecting performance and reproduction.

Our program in a nutshell: we keep striving to balance all traits in maternal indexes, then we look at the Feeder, Grid, Beef and watch the \$Combination index. We also realize we can't do extreme growth in our program, as here in Wyoming we don't usually have the abundance of feed needed for extremes. We strive for plenty of pounds and plenty of growth, coupled with fertility and efficiency and we'll take carcass when we can get it, but we can't afford single-trait selection in our program. Maternal is a big deal to us and we always keep it at the front of our selection criteria.

Our bulls are and will keep stepping up to meet your program. They are not burned out on hot feed; we strive to raise bulls that will sire market-topping feeder calves that grow and finish quickly, and grade and hit the target weights of 1450# to 1550# payweights in an efficient and timely manner. It's also important to us that our bulls will last several years for our customers. With the hardy, get-it-done genetics added in the last few years, we think you will like them. Two-year-old and yearling bulls were tested at Lingle, WY. We have a set of good, big 2-year-old bulls; we keep some of our younger bulls exclusively for this sale. These older bulls can handle the miles to water, rough country and really get the job done. They have been PAP tested here.

Come for lunch on Tuesday, April 2; our local cattlemen serve a great lunch. Look the bulls over, make your evaluations, and call us if you need additional help or information. We are very grateful and honored that you allow us to have the opportunity to be your source for high-quality Angus bulls. Thanks for coming.

*Sincerely,
Buttons York & Family*

WEBO Angus

17th Annual

Turning Grass Into Greenbacks
Bull Sale

April 2, 2024

At the Ranch • Lusk, WY • 1 pm • Lunch at noon
8 miles east on Hwy 20 to Node, then 0.6 miles south on Pfister Rd

Selling: 17 Two-Year-Old Angus Bulls
90 Yearling Angus Bulls - 5 Yearling Hereford Bulls

All bulls will have updated carcass ultrasound data, yearling weights, ADGs and scrotal measurements available sale day.

SALE DAY PHONES:

Buttons 307-216-0090 | Elly 307-340-1499 | Odessa 307-340-1182

Auctioneer: Lex Madden 307-532-3333 • 307-532-1580

Sale Advisor:

Justin Smith 307-340-0724
Torrington Livestock Markets & Cattle Country Video

Ringmen:

Curt Cox, <i>Wyoming Livestock Roundup</i>	307-630-4604
Brady Williams, <i>Tri State Livestock News</i>	406-938-3071
Alan Sears, <i>Western Ag Reporter</i>	970-396-7521
Ty Thompson, Torrington Livestock Markets & Cattle Country Video	307-340-0770

Kurt Kangas, American Angus Association
Ryan Large, DV Auction

Sale Location:

8 miles east of Lusk on Hwy. 20 (toward NE), turn right (south) on Pfister Road (by church) 6/10 mile. Watch for signs.

Accommodations:

Rawhide Motel	307-334-2440
Townhouse Motel	307-334-2376

Best Western	307-334-2640
Trail Motel	307-334-2530

Food and Refreshments: Complimentary coffee, rolls and lunch will be available sale day.

Inspection of Cattle: Cattle are available for you to view here at the ranch 8 miles east of Lusk, WY on Hwy. 20. Call 307-216-0090 or 307-340-1182, and we will be glad to make arrangements with you to view the bulls.

Identification of Bulls: Ear tags and freeze brands on right hip will correspond to the lot numbers in this sale book.

Photography: Chelsee Camblin Photography

Herd Health:

Birth - Alpha CD, Calf Guard, MultiMin
Branding - Vista Once SQ, Vision 7 CDw/Somnus, Once PMH, Endovac
Late July - Vista Once SQ, Vision 7 w/Somnus, MultiMin
Mid September - Pyramid 5 +Prepsone, Endovac, Vision 7 w/Somnus
October - poured Cydectin, wormed Safeguard, MultiMin
February - poured CleanUp, wormed Safeguard, Foseguard Vaccine (foot rot), annual booster (2-yr-olds), PAP testing
March - Fertility Testing, Foseguard Vaccine (foot rot)
Bulls will be tested BVD PI Free

Herd Development:

Bulls are fed a forage based ration to have both optimum gain and growth. They will not be packing a lot of extra condition. They will look good, but will not be fat. We still maintain that too much condition will have an impact on their soundness and longevity. We believe they will be better breeders, sounder and last longer if they are not overfed. The dams of these bulls are wintered here at home. They have to make it on native pasture, hay and cake. If they work for us in this environment, they should work for you.

Terms and Conditions:

Cattle will sell under the suggested Terms and Conditions of the American Angus Association (http://www.angus.org/Pub/suggested_sale_terms.pdf).

Calving Ease Stars

- 4 Bulls should work on all heifers
- 3 Bulls should work on most heifers and smaller younger cows (Really thin or extra small or really fine boned heifers excluded)
- 2 Bulls should work on most young cows unless they are thin or extra small framed
- 1 Bulls are for mature cows only

Settlement and Delivery:

All bulls are to be settled for sale day, unless prior arrangements are made. Free delivery is available within a 200-mile radius of Lusk, WY. Delivery beyond 200 miles at cost. We will begin delivering bulls within a few days of the sale. If you haul your bulls home on sale day, we will deduct \$75 per bull per buyer.

Liability:

All persons who attend the sale do so at their own risk, and WEBO Angus assumes no liability, legal or otherwise, for any accidents which may occur.

Supplement Sheet:

A supplement sheet will be available sale day with ultrasound data and updated performance as well as scrotals on all bulls. This sheet and all announcements from the auction block will take precedence over information in the sale book.

Retaining Interest:

We are retaining a 1/3 semen interest or revenue interest in all bulls selling unless announced differently from the auction block. Full possession and full salvage value sell on all bulls unless otherwise announced sale day.

First Breeding Season Injury Guarantee:

We offer a first year breeding season guarantee on bulls selling for **\$3,500 or more** for the 90 day period following first turnout of the bull, for any injury that would keep the bull from being a breeder for the first breeding season. If a problem occurs, buyer will be able to exchange the purchased bull for a bull of similar value. If a replacement is not available, the buyer will be given credit minus salvage for the original bull purchased, that is to be used within one year of sale. Lack of care or feed (starvation or no water), human error or injury caused by purchaser will cause this guarantee to be null and void. Example: Deliberately running into bull with pickpaw resulting in broken leg.

PAP Testing (Pulmonary Arterial Pressure):

In recent years, our industry has been seeing an increase in Right Heart Valve Failure in black hided cattle, both at lower elevations and in feedlots. Here at WEBO we have watched bloodlines and have been careful not to use lines that are known to have trouble with the issue. Growing up at Laramie and Centennial, WY, I have been very aware of the issues and the costs to producers with PAP problems. We have PAP tested all of the 2-year-old bulls in the sale, at 18-20 months of age. We do this because at this older age and elevation the bull's PAPs become more reliable and stable. We do not test our yearling bulls because the test results at best are only a screening PAP, **the accuracy is 60% or less for low scores on a really good day.** Low scores at our elevation on young animals does not mean they will remain so. Low scores are not predictable and may well not have much indication of their future level of reliability at an older age and or high elevation. **The results for high scores are accurate on younger animals at lower elevations,** the results are a screening test and alert us who the hyper-responders are. Lower PAP scores are a better indication for living successfully at high elevations.

Insurance:

We highly recommend purchasing full mortality insurance on the bulls you purchase, to protect you from loss should they die. Mortality & Infertility Insurance will be available through Dakota AG Insurance, Jared Mohnen 605-999-4475.

ADG:

Weights for ADG were collected on 1/17/2024. Complete data, along with ADG for the total test will be available on our website WEBOAngus.com and also available on sale day.

ANGUSMEDIA EPDs contained in the hard copy of this sale book were current as of print date. Digital versions of this sale book can be viewed online at www.angus.org and will have EPDs updated every Friday with the exception of EPD references in footnotes and photos. Any PDF downloads from the website will contain EPDs current as of the date downloaded. References: American Angus Association®, AHIR®, AngusLink™, CAB®, Pathfinder®.

• We raised him. His dam was a super producing cow sired by Consensus out of a top-of-the-line High Prime daughter. He graduated from Midland Bull Test, negative RFI, just under 6 pounds of feed to a pound of gain. Good footed bugger, packed with muscle and is really gentle. Nothing extreme, he is above breed average in most traits.

• INTRODUCING OUR NEW SIRE: He is a locked and loaded performance bull with top of the line efficiency and highly Maternal, CED +7; BW +1.0; Performance Merit, Top 5% WW, +86 and Top 10% YW, +144; Solid Values, Top 2% \$M, +92; Top 1% \$W, +96; Top 20% \$F, +105; Top 45% \$B, +149; Top 20% \$C, +285. Tested at Midland Bull Test, he has a MBT overall Rating of 112, Efficiency Rating of 104, ADG of 3.49, WDA 3.87 and a super MBT -1.87 RFI for efficiency! Most importantly, WEBO Angus is geared up to produce bulls that have efficiency and performance that will work in our country. They will produce replacement females and big-time feeder calves and yearlings that are demanded by your buyers. We are excited to see his offspring! Chexs has good feet, and his calves are just starting to hit the ground.

PAP Score (Two-Year-Olds)

\$Value Indexes Weights & Ratios

Calving Ease Rating

Expected Progeny Difference (EPD), is the prediction of how future progeny of each animal are expected to perform relative to the progeny of other animals listed in the database. EPDs are expressed in units of measure for the trait, plus or minus. Interim EPDs may appear on young animals when their performance has yet to be incorporated into the American Angus Association National Cattle Evaluation (NCE) procedures. This EPD will be preceded by an "I", and may or may not include the animal's own performance record for a particular trait, depending on its availability, appropriate contemporary grouping, or data edits needed for NCE.

GROWTH

Calving Ease Direct (CED), is expressed as a difference in percentage of unassisted births, with a higher value indicating greater calving ease in first-calf heifers. It predicts the average difference in ease with which a sire's calves will be born when he is bred to first-calf heifers.

Birth Weight EPD (BW), expressed in pounds, is a predictor of a sire's ability to transmit birth weight to his progeny compared to that of other sires.

Weaning Weight EPD (WW), expressed in pounds, is a predictor of a sire's ability to transmit weaning growth to his progeny compared to that of other sires.

Yearling Weight EPD (YW), expressed in pounds, is a predictor of a sire's ability to transmit yearling growth to his progeny compared to that of other sires.

MATERNAL

Maternal Milk EPD (Milk), is a predictor of a sire's genetic merit for milk and mothering ability as expressed in his daughters compared to daughters of other sires. In other words, it is that part of a calf's weaning weight attributed to milk and mothering ability.

Cow Energy Value (\$EN), expressed in dollars savings per cow per year, assesses differences in cow energy requirements as an expected dollar savings difference in daughters of sires. A larger value is more favorable when comparing two animals (more dollars saved on feed energy expenses). Components for computing the cow \$EN savings difference include lactation energy requirements and energy costs associated with differences in mature cow size.

CARCASS

The genetic evaluation produces a single set of EPDs for carcass weight, marbling score, Ribeye area and fat thickness. The units of measure are in carcass trait format and analyzed on an age-constant basis.

Carcass Weight EPD (CW), expressed in pounds is a predictor of the differences in hot carcass weight of a sire's progeny compared to progeny of other sires.

Marbling EPD (Marb), expressed as a fraction of the difference in USDA marbling score of a sire's progeny compared to progeny of other sires.

Ribeye Area EPD (RE), expressed in square inches, is a predictor of the difference in ribeye area of a sire's progeny compared to progeny of other sires.

Fat Thickness EPD (Fat), expressed in inches, is a predictor of the differences in external fat thickness at the 12th rib (as measured between the 12th and 13th ribs) of a sire's progeny compared to progeny of other sires.

\$VALUE INDEXES

\$Value indexes, are multi-trait selection indexes to assist beef producers by adding simplicity to genetic selection decisions. \$Values are reported in dollars per head, where a higher value is more favorable. The \$Value is an estimate of how future progeny of each sire are expected to perform, on average, compared to progeny of other sires in the database if the sires were randomly mated to cows and if calves were exposed to the same environment.

Maternal Weaned Calf Value (\$M), expressed in dollars per head, predicts profitability differences in progeny due to genetics from conception to weaning. Increased selection pressure on \$M aims to decrease overall mature cow size and improve foot structure and fertility while maintaining weaning weights consistent with today's production.

Weaned Calf Value (\$W), an index value expressed in dollars per head, is the expected average difference in future progeny performance for pre-weaning merit. \$W includes both revenue and cost adjustments associated with differences in birth weight, weaning direct growth, maternal milk, and mature cow size.

Feedlot Value (\$F), an index value expressed in dollars per head, is the expected average difference in future progeny performance for post-weaning merit compared to progeny of other sires.

Grid Value (\$G), an index value expressed in dollars per head, is the expected average difference in future progeny performance for carcass grid merit compared to progeny of other sires.

Beef Value (\$B), an index value expressed in dollars per head, is the expected average difference in future progeny performance for post-weaning and carcass value compared to progeny of other sires.

Combined Value (\$C), expressed in dollars per head, is an index which includes all traits that make up both Maternal Weaned Calf Value (\$M) and Beef Value (\$B) with the objective that commercial producers will replace 20% of their breeding females per year with replacement heifers retained within their own herd. The remaining cull heifer and steer progeny are then assumed to be sent to the feedlot where the producers retain ownership of those cattle and eventually sell them on a quality-based carcass merit grid. EPDs directly influencing a combined index are: CED, CEM, WW, YW, Milk, HP, DOC, MW, Angle, Claw, DMI, Marb, CW, RE and Fat.

CALVING EASE RATING

- 4 Bulls should work on all heifers
- 3 Bulls should work on most heifers and smaller younger cows (Really thin or extra small or really fine boned heifers excluded)
- 2 Bulls should work on most young cows unless they are thin or extra small framed
- 1 Bulls are for mature cows only

GrowSafe Quick Facts

FREQUENTLY ASKED QUESTIONS

What are the benefits of selecting for low residual feed intake (RFI) animals*:

- Reduction of overall feed intake by up to 12% while maintaining the same level of production
- Reduction in the maintenance requirements of the herd by 9-10%
- Improvements in the feed conversion rates of calves of from 9-15%
- Reduction of manure NPK production by 17% and greenhouse gas emissions such as methane, by 30%

What does this mean for a cow herd?

By selecting for RFI, or introducing several low RFI bulls into your herd, feed-related savings will continue to increase. Several years of genetic selection will improve the baseline feed efficiency of the ranch and savings will continue to transfer to the cow herd as replacement heifers are retained.

What is Residual Feed Intake (RFI)?

Residual feed intake (RFI) is a measure of feed efficiency that is calculated as the difference between an animal's actual feed intake and its expected feed intake. RFI is independent of body weight and size. Differences in the trait cannot be detected by physically looking at an animal, it requires accurate and simultaneous measurement of an animal's feed intake and body weight. Animals with low RFI values are more efficient than those with high RFI values.

What is the heritability of RFI?

RFI is a moderately heritable trait (26-58%), and when used as a selection tool, will result in progeny that consume less feed for the same level of production. RFI is independent of growth, body size and other performance traits, meaning that selection for animals with low RFI will lead to reduced feed intake and improved feed efficiency without compromising body size or growth.

Does selection for low RFI animals, that eat less, result in reduced performance and average daily gain (ADG)?

No, selection for RFI does not result in cattle with reduced performance and ADG. Efficient and inefficient cattle can have both high and low ADGs. To prevent a decline in performance, it is important to select for low RFI animals with sufficient ADG. GrowSafe does not recommend single trait selection.

How is RFI calculated?

RFI is calculated as the difference between an animal's actual feed intake and their expected feed intake. An animal's expected feed intake depends on its body size and growth rate. The calculation for expected feed intake is comprised of data from the entire contemporary group using the animals' dry matter intake, mid-test metabolic body weight and average daily gain data. The GrowSafe data analysts use the data captured automatically and continuously by the Feed Intake technology to determine each individual animal's actual feed intake, which is compared to their expected feed intake. Concurrently, the highly accurate partial body weights collected from the GrowSafe Beef® technology are used to determine each individual animal's average daily gain and body weight.

Example:

	Expected Intake	Actual Intake
Animal A	8.5	10
Animal B	10	9.5

- Animal A: $RFI = 10 - 8.5 = 1.5$
- Animal B: $RFI = 9.5 - 10 = -0.5$

Animal B is more efficient because it has a lower RFI value and because it eats less than expected for its size and level of production.

MAKE YOUR CATTLE STAND OUT

You've made a significant investment in your genetics, but does the market recognize that? Stand out by differentiating our cattle with AngusLinkSM programs: the Genetic Merit ScorecardSM and AngusVerifiedSM.

ANGUSLINKSM
**GENETIC
MERIT**
SCORECARDSM

The Genetic Merit Scorecard gives buyers the confidence they need to pay more for your quality calves.

**ANGUS
VERIFIED**SM

AngusVerified validates your calves are sired by registered Angus bulls and make your cattle stand apart from other black hides on sale day.

Users of AngusLink programs earn **\$13-15/CWT PREMIUMS** on average. Give us a call, and learn how to claim your competitive edge with AngusLink value-added programs.
