AT THE RANCH // WIBAUX, MT

*Selling 162 Simmental, SimAngus & Angus Bulls*

Welcome, Welcome, Welcome,

As we get ready for another year, we look back at a year that certainly had its ups and downs. Mother Nature along with our leadership certainly put agriculture and the world in a position that squeezed us both financially and mentally. Although it's trying at times, the world will keep turning and the men and women that feed the world will prevail. Although we all have moisture on our minds, we as farmers and ranchers know that when it rains that we are in the position for great times ahead. The cattle prices are in very good shape, all classes of cattle bring excellent returns. Grain farmers likewise are seeing very good commodity prices. We all know Ag is not as easy as it is perceived by much of the world. As I look back at the markets through the fall and into the winter, calves have sold very well. Light calves brought a lot of dollars per pound, heavy calves still seem to bring \$150-\$200 per head more. Pay weight is still king. Cross breeding is without a doubt profitable and offers big rewards. In today's tough times a cross bred calf offers all cattlemen extra income potential without any extra cash out lay. I struggle to understand why anyone raising commercial cattle would not crossbreed. Many straight bred British cattle are offered a chance to raise \$100-200 per head more income just by crossing with another breed. You will be surprised how many less small calves show up at the weaning pen. We ourselves see a 50 lb plus difference in our Sim-Angus sired calves over the straight Angus. The Simmental breed is very aware of the industries' needs at all levels. Calving ease, mature cow size, and the ability to convert feed and go on to the packing industry and out to the consumer. Beef is what's for dinner, and the majority of the world knows it and craves it. This set of bulls have been as consistently good and powerful as we have ever offered, absolutely packed with calving ease,

performance, eye appeal, and profit potential. Whether you are looking for a herd sire or a consistently powerful set of bulls, we have them. I encourage you to go check out other programs, we feel you won't find a more powerful even group that are made like you like them. These bulls are bred to survive the tough times and excel in the good times. They are the cowman's kind, they will sire replacement females that thrive and steers that excel from birth to weaning and onto the feed-yards and the consumer's dinner plate. When you sell your calves these bulls will sire pay wt and value. They will help eliminate small under wt calves that need to be held back or cut out. We welcome your visit pre-sale or anytime you are passing through. If you can't make the sale, we have a video online at DV Auctions, view it, and then call us, let's make a plan and go over the offering. We guarantee sight unseen purchases when you consult with us, if you don't like them, you don't own them, that simple. I have never been more confident in a set of bulls we have ever offered. Likewise, the industry is setting itself up for great times ahead. When it rains again let's be ready with the genetic value it will take to bank extra profits. We wish each and everyone a Happy New Year, rains that are timely, and grass that waves in the wind. Whether you need a bull or not come take a look, have dinner on us, and enjoy our hospitality.

The crew at Begger's Diamond V Ranch,

Rocky Forseth, Allied Genetic Resources ..... 406-590-7984  
Bill Pelton, Pelton Livestock Representative ..... 406-671-5100

## RANCH LOCATION

The sale will be held at the ranch located south of Wibaux, Montana.

Go 4 1/2 miles south of the Wibaux County Fair Grounds on Highway #7, then turn left on Black Diamond Road (east) go 1 1/2 miles, then turn right (south) on Custer Trail Road, go 2 3/4 miles, sale location is on the left hand side of the road.

From Beach, North Dakota, take Exit One, turn left, go past both Truck Stops, approximately 1 mile to the first stop sign (please note the 4 way stop), turn right at 4 way stop, go 7 miles west, then turn left on Custer Trail Road and go 2 3/4 miles, sale location is on the left hand side of the road.

From Baker, Montana, take Highway #7 north, approximately 35 miles, turn right on Red Top Road at mile marker 71, where you'll see the large black bull ranch sign, go 1 1/2 miles east (Custer Trail), turn left, go 1 1/4 miles, sale location is on the right hand side of the road.

## CATTLE VIEWING

We welcome your visit anytime that you are in the area. Please call before you come, so that we are here to show you around.

## ANNOUNCEMENTS

Announcements made sale day and from the auction block during the sale take precedence over printed material associated with this sale. Anyone attending this sale attends at their own risk. Begger's Diamond V Ranch or any of the sale force will not be responsible for any personal injury or loss while attending this sale.

## TERMS AND CONDITIONS

As recommended by the American Angus and American Simmental Associations. Cattle will only be released from the sale after they have been settled for. In no instance, will any cattle be allowed to be loaded for shipping without full settlement. Simmental EPDs listed in the catalog were populated on December 28, 2021. Angus EPDs listed in the catalog were populated on January 3, 2022. Please note that EPDs may change from time sale catalog is printed, until registration papers are transferred.

## FEEDING ARRANGEMENTS AND DELIVERY

For bulls selling for \$3,000 or more, we will offer free keep of your bull until the first of April. At that time we will semen test and give your bulls a breeding exam and deliver them free of charge up to 500 miles. For bulls that sell for less than \$3,000 we will feed them and have them semen tested for \$150 due on sale day. We will help in delivery arrangements. The bulls will be delivered to your ranch or in some cases when there are multiple owners of cattle on the truck and there is a need to unload and sort cattle, we may ask that you meet us at a central location that is convenient to both parties. For cattle selling over 500 miles away, we may have to hire a trucking firm to help with delivery, if so, we will guarantee delivery cost not to exceed \$300 per bull. In most cases, we will deliver them ourselves, but occasionally we will put the bull on a commercial truck that is reputable and conscientious. For purchases of cattle a long distance away, we ask that you be flexible on delivery dates in case we have the opportunity to send your bull your direction earlier than April 1st. When purchasing a bull from Begger's Diamond V Ranch, we take responsibility in delivering a healthy, breeding bull. We will take responsibility of injury or death loss while the bull is on our ranch. Responsibility of your bull purchase begins when he reaches your ranch or delivery point. We guarantee buyer satisfaction. If you have any problems with your bulls ability to breed and settle cows, let us know so we can make it right.

## FIRST BREEDING SEASON GUARANTEE

All bulls will be covered 50% by Begger's Diamond V Ranch if they are injured during their first breeding season. Breeding season is defined as the first 60-day period following the first turnout of bulls. 50% of the value of the injured bull will be given as credit on a bull in a future sale or a replacement bull if one is available. Please notify us immediately after injury has occurred and before bull is sold for salvage. All claims should be made before September 15, 2022. We suggest that you insure your bull against death. We cannot guarantee them against an act of God or sickness that develops while he is in your control. We do guarantee our cattle to be healthy sale day.

## HEALTH AND VACCINATIONS

The Bulls were vaccinated at branding with Pyramid 4, with Presponse and Vision 7 with Somnus, and again at weaning, they were poured with Ivermectin on September 3 and again in December.

## SALE ORDER

We will sell lots 1 through 20, then fall bulls, then go back to lot 21 following catalog order, selling Angus bulls last.

## SIGHT UNSEEN PURCHASES

We guarantee all sight unseen purchases. Call ahead and we will go over the bulls and try and match you up with a bull that meets your needs. You can leave a bid with us or any Sales Rep, or by phone, whichever is convenient for you. We know our cattle and strongly recommend that you call and visit with us on all sight unseen purchases. Sight unseen purchase policy does not apply if you are selecting your own bulls without our consultation or the help of our sales reps.

## ONLINE BIDDING

Our sale will be broadcast over the Internet on DVAuctions. If you cannot attend the sale in person we have set up this method so you can view the sale and make a purchase. Make sure you pre-register with DVAuctions before sale day. We likewise will offer phone service sale day for those who prefer making their purchase that way.

## GENOMICS WITH COW SENSE

There is a lot of hype out there about EPDs, Genomic Testing, and Carcass Traits. We strongly believe in the use of all of these genetic enhancement tools. We also know that you can ruin a good cowherd in a blink of an eye if you chase paper traits with no directive or focus put on the mother cow and what it takes to keep her in production with as few inputs as possible. There are breeding programs that only provide EPDs with no actual data. Be careful, at times these cattle might not offer a total package, the upkeep, loss of production, and lack of fertility may cost more than the rewards. Every breeder has the actual data, we believe that as a customer you deserve to access it, if it isn't there, ask for it. Any competent breeder shouldn't be afraid to share it. They don't like to show actual data because it isn't all that good. Raw data such as actual birth weights, 205 wts, 365 wts and performance data and indexes allows you to observe how an animal has performed within his contemporary group. It shows you his potential to sire calves that may increase or decrease certain traits. There are way too many cattle out there with excellent EPDs and dollar indexes that are not worthy of anything but a castrating knife. You can breed for all the highest EPDs and indexes in the world, but if you sacrifice COW EFFICIENCY, FOOT AND

LEG STRUCTURE, FLESHING ABILITY, MENTAL, MATERNAL, and PHYSICAL TRAITS, such as UDDER QUALITY, along with an animal's ability to produce PAY WEIGHT and EYE APPEAL, all you will gain is a cull cow with good EPDs.

*When I wrote this paragraph many of my fellow breeders and industry associates considered me as an EPD and Index hater. This is not true, we use EPD's and Indexes the way they should be used, with an open mind and as one of many tools. So often I watch breeders and cattlemen get so wrapped up in a chase to produce that bang-up sale topping bull with the elite EPD profile, that they fail to watch cow efficiency and structure. Many times the structure and total performance will lack. Folks if all you had to do is add up the numbers, breeding cattle would be easy and everyone would be equally successful. What I notice about EPD's, they are constantly changing because their accuracy level is low. Don't dwell on them to be the total answer, use them to increase or decrease traits that you want to change, like with a bell curve the biggest or lowest numbers are not always the ultimate goal.*

# SPRING SIMMENTAL BULLS

## THE SPRING BULLS

These spring born bulls are exceptional this year. Our calf crop ran 40 strong to the bull side, so we had the opportunity to use the knife very hard. I can assure you if they even had one little flaw, no matter what, he was a steer. I don't believe we have ever offered a set any stronger. We decided if we wouldn't use them in our commercial herd why would our customers want to. Come take a look, do compare, I believe you will be impressed. Times are tough, expenses are high. We feel these bulls are right for the times and will offer the genetics to propel you in the right direction, they are a powerful group. They are very quiet natured, thick, and easy fleshing, profit driven, and as uniform as you will find. They are ready for your appraisal. They are a blend of EPD's, common sense and an experienced eye that ensures every bull will deliver value, no matter how you market your calves.

Without a doubt a herd bull candidate. This Favor son came off the cow as our #1 weaning wt actual. He is very attractive, clean made, wide bodied, strong topped, with outstanding EPD's. Not a heifer bull, but one heck of a cow bull. His dam consistently produces one of our best. By all means put this bull on your list. There won't be many that offer his potential. Very quiet disposition. DNA tested by Igenity.

This is one well balanced super bull. Looking for the best Purebred herd sire candidate, you need to have this bull on your list to see. He is clean made, hard to pick apart and all bull. His EPD's say he is one of the breed's finest, and when you analyze him, he's got all the right parts. We have been in this business for 46 years and I don't believe we have raised a better herd bull candidate. Very quiet disposition. DNA tested by Igenity.

This Cowboy Cut son has what it takes to be a lead off herd bull candidate. He weaned heavy and has never stopped performing. If you need a seed stock bull or a powerhouse to put on commercial cows, here he is. His daughters will be wet and powerful, no doubt one of the elite to sell anywhere. A true scale crusher and a true outcross. DNA tested by Igenity.

Absolutely fantastic, this bull is a real outcross to about any Sim-Angus cattle. Out of SAV DownPour and a powerful Ignite 2 year old daughter. You won't find a more complete thick made Sim Angus anywhere. He is an absolute stud. His young dam certainly out did herself here. If he produces like he looks, just stand back and reap the rewards. He is a rare find, you will run hard to find this kind of balance, phenotype, and thickness, it is all there. He is very quiet. DNA tested by Igenity.

A very stout complete herd bull prospect, they just don't make cattle with anymore balance and eye appeal. Out of a Top Notch cow family that never lets you down. These Favor calves are certainly powerful and right for the times. Analyze them as a group or individually, you can't help being excited. Performance, fleshing ability, or EPD's, this guy has it all and he is homo black and homo polled. DNA tested by Igenity.

Here is a strong made bull that comes out of a cow that has never missed a beat. These Top Shelf calves, are real unique, they come small and out perform most calving ease cattle by a long stretch. If you are looking to produce calves that are long, deep sided, and press the scale down, here is one you need to study. An added bonus is, he's very quiet disposition.

Out of Sale: Lot 11

I don't know why he is even leaving the ranch, he is as complete and easy as any. His dam is very stout in her makeup, with a perfect udder. We absolutely love these Pay Dirt cattle, high performing, eye catching, and they mature into cattle that work. If you want to add one of the top easy fleshing bulls, put him in your pasture.

We used Guardian for the first time this year, these calves came very easy, they had excellent vigor, and performed above our expectations. When it comes to cattle that check all the boxes on paper, Guardian is one to use. It certainly did not stop there! This bull puts together a very nice performance package. His dam is no slouch either, always raising the right kind.

This bull's 2 year old dam knocked it out of the park, way out. Who says you can't have it all, one who says a 2 year old can't keep up. There is so much good to offer here. Fleshing ability is at the top of the list, no melt down in this bull's dam, perfect uddered and strong throughout. If you want it all, put an extra hash mark by this Lot. We used Flat Iron on heifers for calving ease, but got way more, these cattle just wreak with volume and thickness. I don't know if I could change this bull much, he is a knock out.

I just have to admire the completeness and balance this bull brings to the table. Out of a very good 3 year old dam that just don't fault. This bull offers a very nice EPD profile and even a better performance package. Cattle like him ring the bell when it comes to total performance, use him on those young cows that need protected at calving. He has a very gentle personality.

Pure performance and out of one of our top cows, she is 11 years old and absolutely one of the most productive cows on the ranch. This Cowboy Cut son will add a little frame and a ton of performance, use him on a set of cows that could use more size and reap the rewards. He comes with a very calm demeanor.

This is a high performer. These Cowboy Cut sons seem to add a little extra frame, but still sensible sized. This bull is very attractive and should sire calves that catch attention at sale time. You will love the udder quality he puts on his daughters. I recommend a set of Angus or baldys and the rest will be profitable and eye appealing.

What a great bull calf out of a very good 2 year old dam. I may sound like a broken record, but this set of bull calves out of a very powerful set of 2 year old heifers sure make it fun to calve heifers. The real excitement is at weaning and all winter long when they turn into bulls. No doubt he will add class and performance to his calf crop. Don't hesitate to put a group of these Flat Irons together. They will keep your cattle moderate in size and classy, you won't be disappointed.

This Flat Iron is moderate, deep, and thick. Only 79 pounds out of a 2 year old dam that put her heart and soul into her first calf. This bull is for the cowman that like to keep his cattle moderate framed and sensible sized at maturity. Use him to sire excellent replacement and calving ease. He is thick, quiet natured, and well balanced.

8J is a thick, deep, bodied, Manifesto. He was the \$62,000 Proclamation son out of Doug Bichler's a couple years ago. We like this bull, he is thick, deep and very calm. He should really help put muscle on his calves. His daughters should really shine, as he is loaded up with a great cow family. He is out of a very nice moderate Eagle 2 year dam.

These Top Shelves are what the world could use more of, and this one is one of the top performance sons this year. His 3 year old dam did a heck of a nice job on this one. He is very thick, deep sided, and high performance, you won't go wrong here.

I don't know if you can pack more thickness and depth into an animal. This bull is absolutely thick, wide, and moderate. The Gipper calves surprised us at how light they are at birth, but that didn't stop them from performing very well. I recommend using this bull on cows with a little more frame. If you like them thick, moderate, deep, and easy calving, this bull will fit the bill. He just takes your breath away with his sogginess, I put a lot of stars by this one.

Boy oh boy, we are in a thick soggy set of bulls and this bull does not take a back seat to any. If you like cattle with extra capacity and sogginess take the time to look him up. You won't have to look hard because he has a massive rib and depth of body. Out of the SAV Rainfall and a hard working 2 year old dam. He is an outstanding individual, the Rainfalls are very quiet natured.

For you folks that follow EPD's, you may want to put your business hat on here. This Guardian son has the highest API in the entire offering. It don't end there, he is extremely high calving ease and low birth with excellent growth and top marbling and rib eye. This is not your everyday calving ease bull with good numbers, he has a lot of eye appeal and body shape. I feel that his cow family will separate him into an excellent choice to use on seed stock or commercial heifers that are well developed. He is more than just a good set of EPD's.

Now here is a bull that came light at birth and weaned heavy out of a 2 year old momma. These Flat Irons sure are eye catchy. They are moderate framed, deep bodied, and wide based. He has a low birth, high calving ease EPD, along with good growth and excellent marbling and carcass merit. I recommend using him on cows that need calving protection and a little less frame and more fleshing ability.

I really like this Conoco son, he is very eye pleasing and gentle natured. 81J has the presents to sire cattle that say time after time, Here I am. I feel this bull is going to sire cattle with excellent performance and style. We have great expectations out of the Conoco cattle and this one explains why. Any calf buyer would love to own load after load of his kind.

These Preacher calves resemble Main Event. They are clean made, strong topped, and easy on the eye. This bull is a classy bull with the right parts. Use him on any cow and add eye appeal with good performance. He should work very well on Angus or Baldy cows, his daughters will make real neat type cows.

This guy will sire a great set of calves when used on British bred cows. He has got the power along with the EPD values that make him genetically one of the bulls that fit most of the boxes. He is out of a 2 year old heifer and the Guardian bull that was the \$85,000 bull in the bred for balance sale. This bull was weaned very early in life so he probably had even more weaning potential. Don't over look him, he needs to be on your list.

## TESTICLE MEASUREMENTS

The scrotal circumference of each bull was tape-measured on January 2, 2022. The scrotal measurements were adjusted to yearling, and sometimes will vary one way or another as actual yearlings. We guarantee our bulls 100% for fertility, unless damage is induced at your ranch, and then it's out of our control.

Recommendations for Scrotal Circumference:

Months of Age	12-14	15-20	21-30	30 +	
Scrotal cm	35	37	39	49	Excellent
	30-35	31-37	32-39	33-40	Good
	30	31	32	33	Poor

This is a well made Eagle son that comes from a very nice cow. You will appreciate his volume and depth of rib. The Eagle cattle make very nice females and the steer calves are excellent carcass cattle. You will want to retain females out of this bull, his dam has a very neat well made udder.

Here is a younger bull in the sale, he boasts a 702 lb ww, and is out of a real moderate stout made dam. His sire is the Supreme bull that was a high seller in Kip Julson's sale. Look at his EPD profile, there is not much to change or leave to chance. The Supreme's bring excellent calving ease with a lot of eye appeal. Use this guy on those British bred cows to add pounds and value.

We are starting on a new pen of bulls and we chose 7J to lead the way. These Flat Iron's seem to get the job done, they are deep, thick, and wide. 7J offers a lot of performance in a moderate package. He is out of very efficient 2 year old Pay Weight daughter. They have a lot of rib shape and volume, with plenty of base width. This bull offers fleshing ability and performance in a flashy package.

This bull is long and strong, he comes out of a cow that consistently brings in a calf that will press the scale down. He will sire cattle that weigh heavy at sale time and have extra value in feed efficiency and top carcass values. He should add a clean long look, with balance and style. His daughters should be a little bigger cows with excellent udder quality.

This Gipper son certainly packed a punch at weaning with a big 112 weaning ratio. He comes out of a high performance cow that always does a top job. He covers a lot of bases, as he will add length and power along with real good growth. His carcass values are very interesting with excellent rib eye and marbling numbers. All and all, he adds value galore.

Here is a Cowboy Cut son that checks all the boxes fairly well. Just right at birth and really excelled at weaning. He is clean and stylish with just the right frame size. No matter how you analyze him he offers excellent value.

## WHAT CAN YOU EXPECT FROM BEGGER'S DIAMOND V RANCH GENETICS

Our goal is to offer the best when it comes to total profitability. When we select our genetics, we consider all the avenues in the beef business. First of all we look at what will keep you the cow-calf man profitable. Things such as calving ease, fleshing ability, udder quality, disposition, and phenotype, along with mature cow size, and their ability to raise a calf that is worth more at sale time, and is efficient. Producing cattle that the feeders and packers desire. How do we select our genetics? We use EPDs, dollar based Indexes such as API and TI and eye appeal, along with the ability for an animal to be productive, wean a satisfactory calf, breed back on time, and have the ability to use the feed source that our environment provides. We try to run our cows in the same way that most commercial outfits run their cattle and the cows are still in excellent condition. We believe that the API is a valuable tool to

consider, but feel that it is simply a guideline, and like all EPDs and dollar indexes, should be used as a way to split the difference between a choice of 2 animals that appear to be alike. It is just one equation that needs to be considered along with an animal's performance, eye appeal, and ability to survive in its environment. When you purchase your seedstock, take the time to look at your suppliers' cow herd, what do they look like, are they functional, what is their udder quality like, what is their frame size, and do they calve easy, stay in shape, and do they produce a high percentage of their body wt. We consider it all and believe we offer a good solution and end point.

Come take a look, we will have the majority of our cows available to observe, so you can see for yourself what you can expect your cowherd to look like if you use Begger's Diamond V Ranch genetics.

A Top Shelf going back to one of our most valuable Angus cow families. This bull is stacked with cow power, and cow families that do things exceptionally well. 124J should sire top notch daughters and feeder cattle that have value.

## RETAINED SEMEN INTEREST IN BULLS

Every bull sells in his entirety, we know that when you pay a big premium to own a herd sire, that when a breeder keeps a share, it's hard to recoup your investment. We do retain the right to collect 200 units of semen at our expense and your convenience for within herd use only. In case an AI stud buys the bull, we reserve the right to buy semen at cost as if we were a shareholder, but will not share in any revenue received.

This Top Shelf is a lot like his brothers. He has a 102 index on weaning and looks to be a moderate easy keeping bull that should produce sensible sized calves from birth all the way to maturity, but still adding the ability to produce pay weight. The daughters out of him should be very efficient, easy keeping cows with top udder quality.

A very unique pedigree here, Pay Dirt x SAV 9969, a real powerhouse cow maker. These 9969 cows have been the best easy keeping, easy on the eye, and excellent uddered cows. The earning potential of this bull should be excellent, sell steers that pay up and keep daughters that flesh easy, stay the right size, and have beautiful udders.

Out of a great 2 year old dam and Flat Iron. We had exceptional luck when Al'ing to Flat Iron. As you can see we are offering a large group of them, as a whole they are peas in a pod and have performed very well. 22J is no exception, light at birth only 78 lbs and went on to wean heavy. The Flat Irons are thick and moderate and we like them. If you have to protect them, just make sure your cows have enough frame as Flat Iron will shorten them up at times.

This bull just amazes me, he is not ever going to be a big bull at maturity, but he absolutely appears to be a real performance machine. Only 70 lbs at birth and excelled to weaning just missing a 700 lbs 205 wt. I believe he will calve very easy possibly even on heifers. What I truly feel is he will sire moderate framed cattle that can stay in condition even under extreme conditions. Use him to add volume, fleshing ability and eye appeal. He is probably only a 4 frame bull made like a full back and should sire cattle that can stand the tough times.

This is a thick moderate Conoco son out of a big full bodied Beacon daughter we purchased out of the MT State sale. He should sire a lot of thickness and fleshing ability. He is one of the real youngsters in the offering, so don't overlook him. Use him to add body mass and power. His EPD's say there is calving ease and carcass both rib eye and adequate marbling here.

## SUGGESTED GUIDELINES FOR USING YEARLING BULLS

We are firm believers in the use of yearling bulls and feel it is one of the best years of their lives. It is a time when they are easy to manage and their only concern is breeding cows. We have found that yearling bulls that are managed carefully during the second year of their lives, not only do well, but they will perform better, over time. Below are some suggested guidelines for the care of yearling bulls.

Upon delivery to your ranch, keep yearling bulls separate from older bulls and feed them a maintenance ration of 5-8 pounds per head of grain and free choice hay. Reduce the amount of grain fed gradually, so that bulls are on straight hay or grass 2-4 weeks prior to the breeding season.

Where possible, try to limit the bulls to 45-60 days of pasture service the first year. At this time or as soon as possible, remove the bulls and put them in separate pastures with plenty of good quality grass.

It is best to feed yearling bulls separate from older bulls until after their second breeding season. This allows them to achieve the growth and strength to compete with older bulls for feed and space.

You will see the benefit of a little added cost and care of feeding a yearling bull by probably two or three more years of service from a well managed and healthy bull.

Here is a nice calving ease candidate, low birth bull that could be used on heifers that are watched at calving. He is out of the calving ease specialist Boulder and a very nice moderate cow family that always seems to be light at birth. There is also some very good cow power under the hood here.

Here is another Boulder son that has become a top calving ease sire in the ABS lineup. I feel this bull could be used on heifers that are well developed. These Boulder calves have a clean little head and that fine feature that calve easy, yet they have a lot of class and performance that offers more.

## QUICK GUIDE TO ASA EPDS AND \$ INDEXES

**Expected Progeny Differences (EPDs):** EPDs are the most accurate and effective tool available for comparing genetic levels. In using EPDs, the difference between two sires' EPDs represents the unit difference expected in the performance of their progeny. For example, if sires A and B have EPDs of +10 and -5, a 15-unit difference would be expected in their progeny (moving from -5 to +10 yields 15 units). Key to using EPDs is knowing what units they are expressed in. For example, if the above case referred to weaning weight EPDs, A would be expected to sire 15-pounds more weaning weight than B. If calving ease were the trait, A would be expected to sire 15-percent more unassisted births in first-calf heifers; in other words, if B sired 30 assists in a group of 100 heifers, we'd expect A to require 15 assists. A percentile-ranking chart is required to determine where a bull's EPDs rank him relative to other bulls in the breed. For percentile rankings or more detailed information about EPDs and \$ indexes visit [www.simmental.org](http://www.simmental.org).

Listed below are the units ASA EPDs are expressed in:

**All-Purpose Index (API):** Dollars per cow exposed under an all-purpose-sire scenario. (See below for more details.)

**Back Fat (BF):** Inches of backfat.

**Birth Weight (BW):** Pounds of birth weight.

**Calving Ease (CE):** Percent of unassisted births when used on heifers.

**Carcass Weight (CW):** Pounds of carcass weight.

**Maternal Calving Ease (MCE):** Percent of unassisted births in first-calving daughters.

**Milk (MLK):** Pounds of weaning weight due to milk.

**Marbling (MRB):** Marbling score.

**Maternal Weaning Weight (MWW):** Pounds of weaning weight due to milk and growth.

**Ribeye Area (REA):** Square inches of ribeye.

**Warner-Bratzler Shear Force (WBSF):** Pounds of force required to shear a steak.

**Stayability (STAY):** Percent of daughters remaining in the cowherd at 6 years of age.

**Terminal Index (TI):** Dollars per cow exposed under a terminal-sire scenario. (See below for more details.)

**Weaning Weight (WW):** Pounds of weaning weight.

**Yearling Weight (YW):** Pounds of yearling weight.

**Yield Grade (YG):** Yield grade score.

**\$ Indexes:** Though EPDs allow for the comparison of genetic levels for many economically important traits, they only provide a piece of the economic puzzle. That's where \$ indexes come in. Through well-conceived, rigorous mathematical computation, \$ indexes blend EPDs and economics to estimate an animal's overall impact on your bottom line. The same technology that led to the dramatic progress in swine, poultry and dairy genetics over the last several decades was used to develop the following \$ indexes:

**All-Purpose Index (API):** Evaluates sires for use on the entire cow herd (bred to both Angus first-calf heifers and mature cows) with the portion of their daughters required to maintain herd size retained and the remaining heifers and steers put on feed and sold grade and yield.

**Terminal Index (TI):** Evaluates sire for use on mature Angus cows with all offspring put on feed and sold grade and yield.

**Using API and TI:** First, determine which index to use; if you're keeping replacements use API, if not, TI. Then, just as with EPDs, zero in on the unit difference between bulls. (As described above, index units are in dollars per cow exposed.) The difference can be used to determine how much a bull is worth compared to another. Or, put another way, how much you can pay for one bull compared to another. For example, when buying an all-purpose-type sire, you can quickly figure a bull scoring +100 for API is worth an extra \$6,000 over a +50 bull if both are exposed to 30 cows over 4 years (\$50 diff. x 30 hd. x 4 yr. = \$6,000). A percentile-ranking chart is required to determine where a bull's index value ranks him relative to other bulls in the breed. For percentile rankings or more detailed information about EPDs and \$ indexes.

# FALL SIMMENTAL BULLS

## THE FALL BULLS

This set of all bulls are a powerful group, they were all born on the range, checked once a day, even the heifers. All calved unassisted and were never creep feed. They ate what their dams ate and never saw a pampered moment. We weaned them March 14 and fed them a low maintenance diet that never pushed them. In late May they went to pasture and were run strictly on grass, no supplements, mid September we moved them close to home and fed them a low 40 megical diet. These bulls were never pushed and we believe they will be very sound throughout their life time. This is a set of bulls that we worked through several different times and only the cream of the crop were kept. We sorted them for anything we could. You won't find any bad temperaments, bad feet, or low performance. When you get them home turn them out, they will be ready for whatever you give them. They are the cowman's kind. We never ran a gain test on these bulls, so we will provide an actual weight in late November.

I like this bull. He has the volume, muscle, and build of a low maintenance herd sire. His dam has a very nice udder and the eye appeal we look for in cows. I recommend using him on a set of Angus or baldy cows to improve weaning performance and add fleshing ability. There is a lot of value in this bull's genes.

I like him, he is neat in his design and very complete, deep sided, and eye appealing. He should sire excellent females and steers that weigh and pay.

## THE COST OF LIGHT WEIGHT CALVES AT BIRTH

I saw this article in Sydenstricker's catalog, and thought this article was quite interesting, and spot on to what we observe. Breed Associations still believe a lighter calf at birth is better and calculate that in their EPD's, and dollar indexes. We feel many of the real small have problems in the cold and at times with their lungs, and definitely they show up small at weaning time. No, we don't like the huge born either, but on cows there is more rewards than losses with 90-95 lb calves.

Many of us have a predisposed notion that we want calving ease/low BW herd sires. But, in the Angus breed, do we really have that much problem with big calves? It seems like most of the problems at birth are more linked to abnormal presentations than actual calves that are too big for the cow or even heifer. And, it seemed like maybe those smaller calves just were not as thrifty. We decided to see if we could dig into the data, and see what survivability to weaning really looked like. After all, a small calf at birth doesn't really help the bottom line if he dies prior to weaning anyway!

We divided up four years of spring calf crops into three groups: (light) 69 lbs. or less; (medium) 70-89 lbs.; and (heavy) 90 lbs. and up. We edited out any abortions and all twins. In a nutshell, the death loss at birth through weaning was twice as high on the light calves as it was on the medium calves. The death loss on the heavy calves was the least of the three groups, and it was the least in every one of the four years. We did not differentiate according to cause of death, or whether it was right at birth or later on pre-weaning.

We've all heard someone say the growth rate of a dead calf is distressingly poor, and took that to mean we needed lighter calves at birth so we would get more of them born alive. Every operation is different, but it certainly appears to us that bigger calves at birth are more likely to still be around at weaning. We would never advocate breeding heifers to anything but a true heifer bull, but our cowherds might be much better served by sires that give their calves more of a head start.

A study by the University of Illinois on Sim-Angus cattle reported the same conclusions.

"Dear Mr. Begger,

I enjoyed watching your bull sale. It was a good one. I wanted to drive out there but needed to do something before the cold weather. Your bulls seem to last, I know a seed stock producer wants repeat buyers but if they lasted any longer we might forget where they came from! Sold a bull of yours, thought he was six or seven, brand papers were dated 2013!"

- Lee Ingals, Repeat buyer, 2021

# ANGUS BULLS

## THE FALL ANGUS BULLS

These 3 Angus bulls are absolutely 3 of a kind and peas in a pod. They all come from very good powerful Angus dams, their sire was our pick out of Vermillion's program. He did an exceptional job and stamped them alike. These bulls are loaded with volume, have great dispositions, and will sire great daughters. They will put the easy keep in your cows, buy one or all they will do you a lot of good. Note, Lot 146 has a short tail, his dam chewed it off while cleaning him up, yes he had a full tail but his mom over did it while cleaning him up.

This Down Pour son is a very stout, deep sided, herd bull prospect. Kelly Schaaf told me use Rainfall's best son, use Down Pour. He certainly did not disappoint, his calves are powerful, deep ribbed and well designed. This bull's dam is only a 2 year old, but is headed for great success if she keeps producing like this.

**We employ cow sense, common sense and science to create dollars and cents.**

## THE SPRING ANGUS BULLS

I am not going to write a footnote on each of these Angus bulls. I feel each and everyone of them have what it takes to be top breeding bulls. Many of them are 1/2 brothers and are very close in their makeup and kind. You be the judge, these bulls blend together well. They're the type you can use on cows with great success, no extremes, just good bulls, a few heifer bulls I will identify. Their dams are made right, have a lot of fleshing ability, everyone has an excellent udder, you be the judge, you won't be wrong.

This bull was weaned in June, it hurt his performance. His dam was one of the best Franklin daughters you could lay your eyes on. He could be the buy of the sale.

# REFERENCE SIRES

## SIMMENTAL SIRES

### BCLR MANIFESTO G352

Doug Bichler's \$62,500 sale topper, a Proclamation son that sires them with a little more thickness and power than Proclamation does. We like what we see, more of a cow bull that offers a little more punch and fleshing ability.

### CDI PREACHER 274E

This Main Event son was my pick of all the bulls at the C Diamond sale. He had a disposition that was second to none and way out front of any other bull in that sale. Preacher sires cattle with eye appeal, they are stylish and born easily. You can use his sons on a wide variety of type and kind with very good results.

### CCR PAY DIRT 2340C

An ABS Sim-Angus bull that ABS claims to be 1682's best son. We think that could be true. This is Pay Dirt's third set of sons in the sale and another group is on the way. In our sale, a Pay Dirt son topped it and all were sought after. We think there is a couple of his sons that are pretty special again this year.

### GQ CONOCO FG [PICTURED ON PAGE 16]

This purebred bull is absolutely a breeding piece. He is moderate framed, thick made and loaded with muscle and eye appeal. One of his greatest attributes is his quiet disposition. It looks like his calving ease is excellent, most are born in the 80-90 LB range and they are moderate and thick. One of his sons is the top 205 wt bull in the entire offering. We feel confident that his sons will be the ticket for both purebred and commercial outfits that are looking to add muscle and performance in a very complete moderate package. Both his purebred and Sim Angus sons are very complete and eye catching.

### HOOK'S EAGLE 6E

This bull seems to do a lot of things right. He has a very easy to appreciate, EPD profile ranking at the top of the charts in most categories. We really appreciate the dispositions he sires, very quiet and easy to get along with. His actual performance and in his progeny is at curve bending levels. He calves easy and the calves weigh like lead at weaning and yearling. One of the unique things is they do it in a more moderate easy fleshing manor with sensible mature size. He is a bull we will be using more in the future.

### LCDR FAVOR 149F [PICTURED ON PAGE 6]

We were looking for a bull with an outcross pedigree that would enhance an EPD profile, along with excellent performance and eye appeal. We decided to breed a set of cows to Favor, we were very impressed with the outcome. These cattle exceeded our expectations, they calved good, performed way above average, and the phenotype is outstanding. We have to say Favor is a very elite breeding bull, you will definitely be impressed with his sons, they will lead off the sale. We feel they are a complete and total package that should compliment most any program.

### LRS TOP SHELF 902F [PICTURED ON PAGE 7]

What a great acquisition this outstanding individual has not done much wrong. His sons and daughters are absolutely some of the best. He calves easily. After calving this spring, we have bred him to several heifers, we will find out if he makes the cut as a calving ease heifer bull soon. No matter on cows, he is a slam dunk. And it don't stop there, both his sons and daughters are absolutely on track to be some of the elite. If your program is looking to add calving ease, fleshing ability, weaning performance and maternal characteristics, here is one of the breeds best and most consistent sires. He has been heavy use in both our spring and fall programs and will be one of the heaviest used bulls in the future. Easy calving, excellent performance, top of the line eye appeal and not a bad one in the bunch.

## NLC HALF NELSON 98E

This 1/2 blood Range Boss son was a sale feature at Nelson's a few years back. He has a little more frame than his sire, but sires calves that are flashy and are performing quite well, most of his sons and daughters made the cut and look to be cattle that will add value. We lost him in early summer due to a leg injury so there won't be many more.

### QB IGNITE D83

This bull absolutely rocks. We were looking for a baldy bull with no white under his belly, when we saw this bull, we knew he was the one. He sires them thick, deep and good. His calves perform at the top of the pack. You get about ½ baldy and ½ solid black when used on solid black cows. His disposition is outstanding and the fleshing ability and performance is what the industry needs more of.

### SYS BANJO F39

Want to add some length and eye appeal, Banjo sons just might be a great choice. These cattle are long, clean made, and eye pleasing. We recommend using them on deep bodied cows that could use more length and style.

### TJ FLAT IRON 259G

Flat Iron is a very thick moderate framed bull with a lot of style and thickness. We used him on a large number of heifers, they came okay, but we think he is a bit much for heifers (cows no problem). These cattle are quite moderate, very thick, and have lots of eye appeal. We feel he is a frame reducer that has a lot of potential in the Industry. He sires fleshing ability and style.

### TJ FRANCHISE 451D [PICTURED ON PAGE 8]

Franchise is a bull that is in the ABS lineup. He is thick, moderate framed, and very eye appealing. We used him on a wide variety of cows with mixed results. We did use him on quite a few heifers and had good results. Never helped any but do not feel that he is a slam dunk heifer bull because we did get some larger BW out of mature cows. Franchise sires' calves that are attractive and most are thick deep sided and wide across the top and down through the rear quarter. The dispositions are excellent. We recommend his sons for the rancher that likes cattle that are moderate framed and eye appealing.

## ANGUS SIRES

### SAV DOWN POUR

Kelly Schaff encouraged me to use DownPour, he feels that he is the next generation to his sire RainFall. These Down Pours are moderate, thick and very useful. He sired excellent Sim-Angus sons and daughters. He definitely has his place in the industry.

### SAV RAINFALL

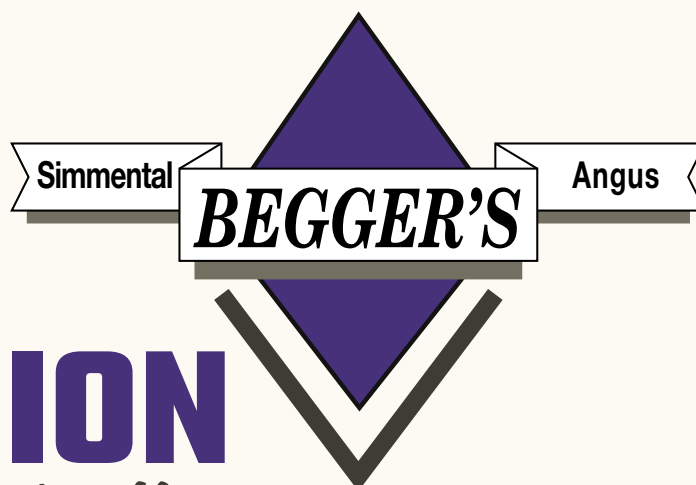

A true calving ease bull with way more to offer than just calving ease. The Rainfall's are thick, easy fleshing, and made the right way. He definitely clicks on Simmental Cattle. We give him a big thumbs up, as a true curve bender with added style and performance.

### VERMILLION PRIVILEGE E85G

This bull was a stud. When I went into the over 300 bull in that offering, there stood VP, what a thick, deep, powerful Angus. He just reeked with thickness and he possessed a butt end that very few Angus cattle have. His calves are a real pleasure to observe, like their sire full of meat and muscle. Get a hold of the rope, these cattle are exciting.
